The declaration of principles adopted by the Populist convention is framed on lines which have by this time become familiar. It demands "a national currency, safe, sound and flexible, issued by the general government only, a full legal tender for all debts, public and private, and that without the use of banking corporations, a just, equitable and efficient means of distribution direct to the people;" insists upon "the free and unlimited coinage of silver and gold at the present legal ratio of 16 to 1;" demands that the amount of the circulating medium be speedily increased in "sufficient quantity to transact the business of the country on a cash basis;" advocates a graduated income tax, and declaring that the money of the country should be kept as much as possible in the hands of the people; demands that all state and national revenues shall be limited to the necessary expenses of the government, economically and honestly administered. Furthermore, the platform urges that postal savings banks be established by the government for the safe deposit of earnings of the people and to facilitate exchange; declares that transportation being a means of exchange and a public necessity, the government should operate the railroads in the interests of the people; and that the telegraph and telephone, like the post-office system, being a necessity for the transmission of news, should be operated by the government in the interest of the people. It also declares that the land, including all the natural sources of wealth, is the heritage of all the people and should not be monopolized for speculative purposes; that alien ownership of land should be prohibited, and that land now held by railroads and other corporations in excess of their natural needs and all land now owned by aliens should be reclaimed by the government and held for actual settlers only.

Still another plank in the platform declares in favor of direct legislation under proper constitutional safeguards, so that the citizens shall have the right of initiating, framing and proposing laws, and of compelling the submission thereof, and of all important laws, whether proposed by national, state or local legislatures, to a direct vote of the people for their approval or rejection.

The platform of the Silver Convention dealt entirely with the monetary question, the substance of it being contained in a paragraph advocating a distinctively American financial system, declaring unalterable opposition to the single gold standard, demanding the immediate return to the constitutional standard of gold and silver by the restoration by the United States government, independently of any foreign power, of the unrestricted coinage of both gold and silver into standard money at the ratio of 16 to 1, and upon terms of exact equality, as they existed prior to 1873, the silver coin to be of full legal tender, equally with gold, for all debts and dues, public and private, and urging such legislation as will prevent for the future the destruction of the legal-tender quality of any kind of money by private contract.

As will be seen, the platforms of the two conventions are practically identical with that of the Chicago convention as regards the one real issue now before the people, that touching the monetary standard, and the conventions have practically decided to support the Chicago nominee for the presidency. This union of the forces opposed to sound money is a political fact of high importance, which it behooves the gold standard advocates not to belittle or ignore.

NEW YORK BANKERS ON FREE COINAGE.

Before adjourning on Saturday last the New York State Bankers' Association adopted resolutions against the proposed free coinage of silver. In these resolutions the association declared in clear and emphatic terms that the bankers of New York had no selfish or class interest in the establishment of any particular standard of value or any use for any particular kind of money as currency, nor were they benefited as a class by the maintenance of one metal as the standard to the exclusion of others. They were custodians of hundreds of millions of dollars, not their own money, but the money of merchants, manufacturers, workingmen, widows, orphans, all in fact who have money employed in business or saved against the impairment of earning capacity or old age, every dollar of which was equal to a gold dollar. The chartered banking institutions of the state of New York were, the resolutions went on, indebted to the public at large in the form of deposits subject to check in the sum of $1,853,000,000, while the public was indebted to the banks in the form of loans and discounts in the sum of $1,261,000,000. With bills payable largely exceeding receivables the bankers believed it to be the part of wisdom and the part of honor for the United States to maintain the present gold standard of value, believing in the full observance of all contracts and payment in money of the same standard as that which existed at the time of the creation of such obligations.

The resolutions went on to say that the best definition of coin money had been furnished by the ablest bimetallist of the age, Henri Cernuschi, who said that it was by the ordeal of fire that money may be tried, and that the coins, which, being melted down, retain the entire value for which they were a legal tender before they were melted down, were good money, while those which did not retain it were not good money.

Gold coins, the resolutions continued, were the only ones that sustain that test. Currency, which was the basis of all business transactions, should be based upon that standard that was least variable and had the widest recognition among the nations of the world, in order that transactions, both national and international, may be settled with the least embarrassment from fluctuations in exchange. The $16,000,000,000 of international trade balances were annually settled in gold. The domestic commerce of the United States, amounting annually to $35,000,000,000, was contracted for and settled upon the gold basis; 83 per cent. of the commerce of the world was upon the gold basis. In view of this fact, the convention declared that it would be criminal folly to break away from the most advanced and civilized nations to join China and Mexico upon the silver basis. Gold has been the standard of value in the United States as a matter of fact since 1834, and as a matter of law since 1873, and in all countries where the gold standard prevails both gold and silver circulate as money. In all countries where the silver standard prevails there is no gold in circulation as money. There was in circulation and in the United States Treasury on July 1 $636,204,102 coined silver and Treasury notes issued against silver bullion purchased, $610,750,012 gold and $604,671,563 paper money.

In conclusion, the resolutions declared that free coinage of silver at the ratio of 16 to 1 means a dollar commercially worth 52 cents, but by fiat of the government made to pass for 100 cents, and the repudiation of 50 per cent. of indebtedness. The sagacious instinct of trade would, the resolutions declared, correct this wrong as to future contracts by doubling the price of commodities, and hence the free coinage of silver at the ratio of 16 to 1 means a great inflation of prices without any increase of values. Just in proportion to this inflation would the purchasing power of a dollar be decreased, and in the same measure and to the same degree would pensions, annuities, salaries, life insurance, saving funds and all fixed incomes be impaired in their power to provide maintenance and support. Furthermore, the resolutions declared that free silver coinage at the ratio of 16 to 1 meant that the $600,000,000 of gold now in circulation would go to a premium, would cease to circulate as money and become a simple commodity, coined or uncoined, would produce a violent contraction of the currency to the extent which gold now in circulation ceased to circulate as money, and would not only unsettle but thoroughly demoralize business. Under the infliction all classes would suffer, but those would suffer most who are least able to take care of themselves, to wit, the laboring classes, and the crushing effect upon business would be equaled only by the demoralizing effect upon public morals and the public sense of honor lowered and humiliated, as they would be by such an act of repudiation. This portrayal of the evils resulting from free coinage is not overdrawn, and it is well that such a representative gathering as that of the New York bankers should make the protest embodied in the resolutions.

INTERNATIONAL ARBITRATION UNDER DISCUSSION.

Some correspondence lately had between the governments of Great Britain and of the United States which has been made public during the week sets forth the basis of a treaty to provide for arbitration between the two countries in certain cases. The original draft of a treaty for this purpose came from Lord Salisbury, who proposed that the two governments each appoint two or more permanent judicial officers for the purposes of the treaty; that on the appearance of any difference between the two powers, which, in the judgment of either of them, cannot be settled by negotiation, each of them shall designate one of the said officers as arbitrator,

and the two arbitrators shall hear and determine any matter referred to them in accordance with this treaty; that before entering on such arbitration the arbitrators shall select an umpire, by whom any question upon which they disagree, whether interlocutory or final, shall be decided; that the decision of such umpire upon any interlocutory question shall be binding upon the arbitrators, and that the determination of the arbitrators, or, if they disagree, the decision of the umpire, shall be the award upon the matters referred. Among the subjects for arbitration are included complaints made by the nationals of one power against the officers of the other; all pecuniary claims or groups of claims, amounting to not more than £100,000, made on either power by the nationals of the other, whether based on an alleged right by treaty or agreement or otherwise; all claims for damages or indemnity under the said amount; all questions affecting diplomatic or consular privileges; all alleged rights of fishery, access, navigation or commercial privilege, and all questions referred by special agreement between the two parties.

Differences in respect to questions of fact or of international law involving the territory, territorial rights, sovereignty or jurisdiction of either power, or any pecuniary claim or group of claims of any kind, involving a sum larger than £100,000, are to be referred to arbitration under the treaty, but if in any such case, within three months after the award has been reported, either power protests that such award is erroneous in respect to some issue of fact, or some issue of international law, the award is to be reviewed by a court composed of three judges of the Supreme Court of Great Britain and three of the judges of the Supreme Court of the United States, and if the said court shall determine, after hearing the case, by a majority of not less than five to one, that the said issue has been rightly determined, the award shall stand and be final, but in default of such determination it shall not be valid; and if no protest is entered by either power against the award within the time limited, it shall be final. Differences which, in the judgment of either power, materially affect its honor or the integrity of its territory are not to be referred to arbitration under the treaty, except by special agreement. Any difference whatever, by agreement between the two powers, may be referred for decision by arbitration with the stipulation that, unless accepted by both powers, the decision shall not be valid. The time and place of their meeting and all arrangements for the hearing, and all questions of procedure, are to be decided by the arbitrators, or by the umpire, if need be.

Mr. Olney, while welcoming the proposals of Lord Salisbury on general grounds, took exception to some of them and suggested substitutes. He proposed, for example, that arbitration under the treaty should also be obligatory in respect of all questions now pending or hereafter arising involving territorial rights, boundaries, sovereignty or jurisdiction, or any peculiar claim or group of claims aggregating a sum larger than £100,000, and in respect of all controversies not specially described in the treaty; provided, however, that either the Congress of the United States on the one hand, or the Parliament of Great Britain on the other, at any time before the arbitral tribunal shall have convened for the consideration of any particular subject matter, may by act or resolution declaring such particular subject matter to involve the national honor or integrity, withdraw the same from the operation of the treaty; and provided, further, that if a controversy shall arise when either the Congress of the United States or the Parliament of Great Britain shall not be in session, and such controversy shall be deemed by her Britannic Majesty's government or by that of the United States, acting through the President, to be of such nature that the international honor or integrity may be involved, such difference or controversy shall not be submitted to arbitration under this treaty until the Congress and the Parliament shall have had opportunity to take action thereon.

Secretary Olney further proposed that in the case of controversies of the kind referred to the award shall be final if concurred in by all the arbitrators, and that if assented to by a majority only the award shall be final, unless one of the parties, within three months from its promulgation, shall protest in writing to the other that the award is erroneous in respect of some issue of fact or of law. In every such case the award is to be reviewed by a court composed of three of the judges of the Supreme Court of Great Britain and three of the judges of the Supreme Court of the United States, who, before entering upon their duties, shall agree upon three learned and impartial jurists to be added to said court in case they shall be equally divided upon the award to be made. To the court there shall be submitted a record full of all the proceedings of the original arbitral tribunal, which record, as part thereof, shall include the evidence adduced to such tribunal. Thereupon the court shall proceed to consider said award upon the record, and may either affirm the same or make such other award as the principles of law applicable to the facts appearing by said record shall warrant and require, and the award so affirmed or so rendered by the court, whether unanimously or by a majority vote, shall be final. If, however, the court shall be equally divided upon the subject of the award to be made, the three jurists agreed upon as hereinbefore provided shall be added to the said court, and the award of the court so constituted, whether rendered unanimously or by a majority vote, shall be final.

In support of these substitutes Secretary Olney declared that they make all disputes prima facie arbitrable, and places where it belongs, in Congress and Parliament, the right and power to decide whether they are arbitrable or demand assertion by force of arms. The administration in authority, he said, when a serious international controversy arises, is often exposed to influences not wholly favorable to its impartial consideration. It is liable to view the honor of the country as not distinguishable from the good of the party. And if war and not arbitration is to be evoked the direct representatives of the people, at whose cost and suffering war must be carried on, should be properly charged with the responsibility of making it. By the scheme as amended, on the other hand, the controversy is finally ended, whereas under the original proposition there would be an award only in rare cases in which the six appellate arbiters favored it either unanimously or by a majority of five to one. Mr. Olney suggested that such an arrangement would be dangerous. In all cases where the arbitrators were equally divided or stood four to two, public feeling in each country would be aroused by the protracted proceedings, and the chances of a peaceful outcome would be rather prejudiced than promoted; and Mr. Olney pointed out that the United States, having no European alliances, has more to fear than Great Britain from the bias of foreign judges.

Secretary Olney suggested that if the amendments proposed by him should prove acceptable, there would be no reason against bringing the pending Venezuelan boundary dispute within the terms of the treaty by express words of inclusion, while in case no general treaty of arbitration could be expected at present, the dispute would offer a good opportunity for a tentative experiment at arbitration. Lord Salisbury, in reply, disclaimed any intention to exclude the Venezuelan dispute, but held that the system of arbitration ought to be applicable to all civilized countries. Somewhat later Lord Salisbury proposed the establishment of a commission consisting of four members, two to be British subjects and two citizens of the United States, to report upon the facts which affect the rights of Spain and Holland at the gate of Great Britain's acquisition of British Guiana, and suggested that upon the report of such commission Great Britain and Venezuela should endeavor to agree upon a boundary, and that, failing in this, a tribunal should be appointed, to consist of one British and one Venezuelan member, and they to select a third, who should fix the line of bonndary, but with a proviso that it should not include as Venezuelan territory any territory which was occupied by British colonists on or before January 1, 1887, or as territory of Great Britain any occupied by Venezuelans at the same time. Secretary Olney declared that the United States government was unable to treat the proposals as well adapted to bring the Venezuelan dispute to a speedy conclusion.

Whether any steps beyond those outlined above have been taken since the date of the last installments of the correspondence, nearly a month and a half ago, is not known. Something has, however, been gained in bringing the question of arbitration, both general and particular, under discussion in a temperate spirit, and it seems not too much to hope that further advances will be made before the incident can be regarded as definitely closed.

A SOUTHERN RATE WAR.

Up to a comparatively recent period the railroads of the southern states were supposed to set an example to the lines throughout other portions of the United States as to how rates should be maintained and competition conducted upon a fair but peaceable basis. The Southern Railroad and Steamship Association, which included in its membership all the prominent railroads of the south, was a model institution, and its workings, with few exceptions, were satisfactory to all concerned. The change which has come over the situation in a portion of the territory in question is all the more marked. It dates for only a couple of years back, and seems to originate in the fact that some of the large systems, notably the Seaboard & Roanoke, known as the Seaboard Air Line, have built extensions into the territory of the Southern Railway, thereby inaugurating a struggle for business and traffic that has kept the lines of the whole section in a constant state of turmoil and made rate wars between them a chronic instead of an exceptional matter. The building of the Seaboard Air Line's independent road across the Carolinas and Georgia to Atlanta, the railroad center of the southeastern states, may be regarded as the principal factor which created this change, and the possession of a vigorous and aggressive management has made its course one little calculated to keep the peace. The powerful Southern Railway has not been slow to take up the cudgels, and for two years past the two corporations in question have been engaged in a constant struggle.

This has within the past few weeks become more than usually vigorous and interesting. The situation, from the point of view of the Seaboard Air Line, has been set forth by its vice-president and general manager, Mr. St. John (who will be remembered as the fighting manager of one of the leading granger roads in the days when the same style of competition raged between the lines west of Chicago), in a published interview, in which he points out that his company has had to take a strong position in order to meet an attack by the Southern Railway upon the line of steamers between Baltimore and Norfolk which had worked in unison with the Seaboard Air Line. He is quoted as saying:

> The Southern Railway established a wholly unnecessary line of steamers between Baltimore and Norfolk. They had a technical right to do it, but I say boldly and advisedly that they did not do it to serve the public or their own business interests. They propose to destroy and not to build up. Friendly connections cannot permit such an attack as this. The claim of the Southern that it cannot handle its business, except with its own line, is preposterous. Established lines can furnish all the facilities needed for scores of years to come. The Southern was offered terms of perfect equality with all other lines. The Bay line is independent of the Seaboard Air Line, but has been a close ally. The Southern, in its attack on the Bay line business, threatens all other established businesses. We have been unable, because of the influence of the Southern to run through sleepers to and from New York over our line, as the Southern does. We have been three years trying to do this and we will yet accomplish it, although at present it is unlawfully denied us. We have been thwarted by the same influence in our Atlanta and New Orleans business, although, contrary to the Interstate Commerce law, which will sooner or later be in force in these cases. Our determination to secure our rights may cause the rate war to last for months and possibly for years, but we believe the shippers and people will support us against the Southern Railway and those behind it.

Allowing for the exaggerations incident to an *ex parte* statement of this kind, the interview presents a sufficiently serious state of affairs and accounts for the heavy rate-cutting now in progress. The situation is one which taxes the ability of the managers of the southern lines to adjust, though it is known that a meeting has been in progress at Atlanta for that purpose.

A HALF YEAR IN THE LONDON INVESTMENT MARKET.

It is possible that at this moment the mention of anything English may have an irritating effect upon the peculiar susceptibilities of a section of the American public which is inclined to find in an unsound currency system a panacea for all ills, real or supposed, that affect the body politic. At the risk, however, of affecting the sensitive feelings of these blind followers of the free-silver prophets, it may be useful to quote from a London contemporary the figures which show the movement of the leading securities dealt in on the London stock market during the first half of the year 1896. It is needless to remark that no American stocks or securities figure in the lists. The blight of the silver

agitation is upon our securities, and it would be adding insult to injury, in the eyes of people who expect to construct prosperity and business prosperity on a 50 per cent. basis, to quote comparisons. All that is needed to say in the premises is that capital is so abundant in London that securities which promise a reasonable certainty of a return in gold to the investor are quoted at figures which return the minimum in the way of interest upon the outlay of capital. The old adage may be reversed in this case. Low interest means in London, as anywhere since civilization and civil security held sway in the affairs of mankind, that there is confidence in the ability and willingness of the borrower to pay interest and repay the original loan. With this brief introduction, the results of the movement of quotations in the London market for the half year ending June 30 is submitted. The puzzle in all cases where active securities are concerned ("Americans" excepted, of course) is to find a decline for the half year. The list, which is taken from the London *Financial News*, is as follows:

	Dec. 31, 1895.	*June 30, 1896.*	*Rise.*

Commercial Cable	165	167½	2½

Comparatively speaking, this is not pleasant reading for the American investor. The journal from which the tabulation in question is taken, without any intentional reference to the conditions which have prevailed in investment and financial circles on this side of the ocean, proceeds in its conclusions to "rub it in" in the following words: "These are typical illustrations of what has taken place during the half year, which, under the circumstances, cannot be described as other than a brilliant one for investors, whether speculative or permanent. We are sorry to conclude with anything to dash their pleasure in the rise of prices. But it must be pointed out that the very fact of the upward movement having been so general deprives individual investors of much of their gain, for where does the benefit come in if you sell a stock at a profit on the price you paid for it a year or two ago, and reinvest the money in another which has had a proportional rise during the same period?"

FOREIGN OWNERSHIP OF BRITISH SHIPS.

Sales of vessels by British shipowners to foreigners are at present attracting attention in Great Britain. A late return gives statistics dealing with the question and covering the period from January 1 to May 1 of the present year. Taking into account the sales to foreigners made by shipowners in the United Kingdom and in British possessions abroad, the total figures for the four and a half months are as follows:

	Vessels.	*Reg. ton.*	*Gross ton.*
Steamers	72	61,171	96,554
Sailing vessels	60	24,361	25,432
British possessions abroad—			
Steamers	4	153	229
Sailing vessels	37	9,574	9,930
Totals	173	95,259	132,195

The Glasgow *Herald*, which prints these figures, says that the return affords no means of comparing such totals with those of previous years, but the authorities of Lloyd's Register have already told all that can be learned on the subject so far as 1895 is concerned. In that year the tonnage sold to foreigners exceeded by 43 per cent. the exceptionally high figures of 1894 and amounted to some 350,000 tons, and the sales in 1896 promise to be much more. Should the quickened pace of the first four and a half months be maintained, it is declared to be highly probable that not less than 400,000 tons of British shipping will pass during the course of the present year into the hands of foreign owners.

The journal in question, in discussing the question, says that, without laying too much stress on the subject, it must be regarded as forming by no means the most serious feature of the return. In some previous years, it remarks, the vessels thus disposed of were of such an obsolete type that the shipowners could be congratulated on the fact that they had decided to get rid of old vessels with the intention of replacing them by new ones, but this is no longer the case. Many of the ships sold to foreigners during the opening months of 1896 are, it appears, of modern build. A large number of them were constructed on the Clyde and elsewhere in the '80s, while not a few were constructed in the '90s. "It appears, then," says the journal quoted, "not only that British ships are being parted with to foreign owners at a more rapid rate than formerly, but that new vessels are going as well as old ones. This tends to support the argument that some of our shipowners fail to make their business pay in face of the rigorous conditions under which certain classes of steamers are permitted to sail; that it is only the foreigner, freed from these restrictions, who can make them remunerative, and that in attaining this end the latter is largely assisted by the low rate of wages which he gives, the cheaper scale of provisions which he adopts, and the smaller crews which he employs."

Regarding the attitude of the government under the circumstances, the *Herald* says that its duty is "to lessen rather than add to the burden which British shipowners are called on to bear. It is to encourage British shipowners to retain their vessels instead of selling them to foreign rivals. Every ship disposed of in this way only does harm to the nation. The door of employment is at once thereby shut against so many British sailors, for none of them get work in foreign-owned vessels. What is more, the transfer results in the setting up of another competitor for the carrying trade of the world—a competitor which may bring freights still further down on account of lower manning and cheaper working. For these losses there is no compensating advantage on our side. The shipowner is the worse; so is the sailor and the country. Only the foreigner gains. If the tide is to be turned, it appears necessary that our shipowners should be inspired with confidence in the intentions of the legislature toward their industry, and that they should have some voice in framing the technical measures that affect their interests." A bill aiming to carry out this general policy has been drafted, and is expected to be heard from in Parliament. Evidently the shipping interests of Great Britain fear the development of foreign competition in a branch of industry which they have long dominated.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

Some of the effects of free coinage in a South American republic have been pointed out in a published communication by the United States minister to Colombia, Mr. McKinney, who says that twenty years ago, in 1876, gold and silver were coined in the mints of Colombia, both being legal tender for all debts, and at that time, owing to the scarcity of the white metal, silver was at a premium over gold of about 3 per cent. About 1880 gold was at a premium, because the imports exceeded the exports. Up to 1885 the government continued to coin gold and silver, and at that time gold was at a premium over silver of about 20 per cent. In 1885 the Congress passed a law that made paper money a legal tender for all debts, the paper to be payable in gold or silver at the option of the government, this being an attempt to put silver at par with gold. At once the gold all went out of the country, and the government was on a silver basis in spite of its effort by legislation to keep gold and silver at a parity. From that time to this, it appears, there has been no gold in circulation in Colombia. The effect of this was to raise the premium on gold from 20 per cent. in 1885 to 190 per cent. in 1895. At the date of the communication, June 17, exchange on New York was 140, the price of exchange depending wholly on the number of drafts on the market and the demand for them.

Information regarding the foreign trade of Japan in 1895 is given in a report by Consul-General McIvor, of Kanagawa, Japan, in a report to the State Department. In tables accompanying the report the Japanese silver yen has been taken as equivalent to $0.51, this being its mean value during that year. The total value of exports was $68,093,662 and of imports $65,922,895. Of this amount the United States is credited with $27,554,764 for exports and $4,730,943 for imports. The customs duties collected were for exports $1,159,281, imports $2,161,809, miscellaneous $88,045, making a total of $3,409,135. During the year 1,863 steamers and 1,005 sailing vessels entered the ports of Japan from foreign countries. Of these 96 were American, 987 British and 371 German. Forty-nine American steamers and sailing vessels were engaged in the coastwise trade of Japan, as against 761 British, 104 French and 181 German. Japan exported $1,423,895 gold and $12,499,970 silver bullion, and imported bullion to the value of $525,255 in gold and $2,470,568 in silver.

CURRENT BUSINESS NEWS.

Industrial.

A Philadelphia dispatch says: Some large orders for locomotives for Russian railroads have recently been completed at the Baldwin Locomotive Works, sixty engines and fifty tenders having been shipped during the last two or three weeks. The works are busier than they were at this time last year, and there are a number of orders in process of completion. The work that is in progress includes the construction of twenty-five locomotives for the Lehigh Valley Railway, twenty for the Baltimore & Ohio and five for the Erie Railway.

Anthracite coal output for the month of August, 1896, is expected to be agreed upon at 4,000,000 tons.

The Amoskeag Manufacturing Company, Manchester, N. H., will close down August 8, indefinitely. Eight thousand people will be rendered idle.

An Anniston, Ala., dispatch says: "Five hundred puddlers, heaters and rollers have struck at the United States Car Works because of the refusal of the company to sign the new scale of wages promulgated by the Amalgamated Association of Iron and Steel Workers on July 1. The new scale is an advance of 50c. a ton. The other rolling mills in the Birmingham district, employing 2,000 men, shut down on July 1 without signing the scale because of a dull market."

The great wool, cotton and silk-weaving works of John and James Dobson, at the Falls of Schuylkill, Pa., "have closed down completely for the first time since the era of business depression made itself felt."

The Iron Works mills of Fall River will close today for one week.

Electric power, it is announced, will be transmitted to Buffalo from Niagara Falls for industrial purposes by November 1.

The Building Convention, which met at Philadelphia this week, represents fully 2,000,000 members and from $800,000,000 to $1,000,000,000 of assets, all paid in on a gold basis.

A cotton thread combination is being formed by the principal manufacturers.

An Ishpeming dispatch says that the ore shipments from Lake Superior and Lake Michigan points up to June 30 exceeded the heavy shipments of last year by over 500,000 tons. It is alleged that the purpose of this heavy shipment was to get rid of the ore on hand in anticipation of the present slump in prices. A number of the mines are preparing to close.

A Providence dispatch says that the Rhode Island Locomotive Works, having completed all contracts, closed on Monday night for an indefinite period.

The Minneapolis *Northwestern Miller* states that the Minneapolis flour market last week showed an appreciable improvement in the volume of business done. The week's sales were about 280,000 barrels. Sales for export are slow because offers are usually about 6d. below what the millers can afford to accept. Export shipments were 79,600 barrels.

At the present time only three pig-iron furnaces in the Mahoning valley are in blast, and four or five in the Shenango valley.

The Philadelphia *Press* says: "The situation in iron and steel shows no improvement, and in some respects there is further retrogression. The weakest spot is for southern pig iron, for which almost any price within a dollar a ton of the market is accepted. Pennsylvania irons are held with a fair degree of firmness at about $11 for good mill irons. The finished material trade is much depressed and prices are gradually receding."

Commercial.

The subjoined statement shows the value of the chief items of imports for the fiscal year ending June 30, 1896:

Coffee	$90,000,000
Sugar	80,000,000
Wool and woolen goods	90,000,000
Silk and silk goods	55,000,000
Chemicals, drugs, dyes, etc	48,000,000
Linen, flax, etc	40,000,000
Cotton goods	38,000,000
Hides, skins, etc	26,000,000
Iron, steel, etc	23,000,000
Indian rubber	18,000,000
Wood and wooden articles	18,000,000
Fruits	18,000,000
Tobacco	17,000,000
Leather and leather goods	14,000,000
Tea	13,000,000
Spirits and wines	11,000,000
Furs	10,000,000
Sundries	171,000,000
Total	$780,000,000

Prime reports farmers have put in bigger acreage of wheat than in 1895; "that prices were never lower, and that rail rates must decline to adjust matters." Clapp & Co. add that in "1867 wheat prices ranged from $1.55 to $2.85 in Chicago; circulation of money per capita was $18.28. In 1877 wheat was $1.01½ to $1.76½; circulation per capita $15.58. Silver ranged 53¼d. to 58¼d., averaging $1.15 in the United States. In 1887 wheat was 66⅝c. to 94¾c.; circulation $22.45. Silver ranged from 43¼d. to 47⅛d., and averaged about 98c. in United States. In 1894 wheat ranged from 50c. to 65¼c., and our circulation was $24.30. The wheat market continues fluctuating between varied crop reports and an apparent increasing export and milling demand."

The largest crop of spring wheat ever raised (that of 1895) is almost all marketed. Millers have some stored, "but farmers have parted with about all of their surplus." The crop this year, some think, will be smaller.

The Agricultural Department crop bureau estimates for July indicate a crop of wheat of 444,000,000 bushels. A Liverpool paper "says a majority of the guesses there favor 500,000,000 bushels."

India harvests its wheat in March. The final official estimate makes the wheat crop there this "year 183,000,000 bushels, against 236,000,000 last year." Their crop varies from 200,000,000 to 260,000,000 bushels, the yield this year being their smallest in a long time. India's largest exports were 56,000,000 bushels from the crop of 1891. It exported only 13,000,000 from the 1894 crop.

By the alleged deal recently between the Russian Trust and the Standard Oil Company the two concerns "practically divided the markets of the world for oil. India, by mutual agreement, is pooled between them. Russia allows the Standard Oil Company to retain its agency at Hong Kong and negotiations are pending for the control of Germany. Standard Oil Company officials say company has made no attempt to acquire property in Russia."

Financial.

The following securities were sold at auction this week at New York:

3	Shares Eagle Fire Company, $40 each	230
200	Shares Chicago, Burlington & Quincy Railroad	64½
400	Shares Louisville & Nashville Railroad Co.	46⅜
300	Shares Chicago, Rock Island & Pacific R.R. Co.	54½@55
200	Shares Consolidated Gas Company of New York	143¾
$6,528.91	Nat. Cordage Co. trust liquidation certificate	$130 lot
$13,500	New York Bagging Co. of Brooklyn 1st 7 p. ct.	12½
207	Shares National Citizens' Bank	125
7	Shares Title Guarantee & Trust Company	281
$25,000	Colum. Type Writer Manufactur'g Co. bonds	$300 lot
$50,000	Colum. Type Writer Manufactur'g Co. bonds	$1,600 lot

The governing committee of the New York Stock Exchange have listed $322,000 general mortgage gold 6 per cent. bonds of the Columbus, Hocking Valley & Toledo Railroad, making the total listed $2,000,000. They also listed $500,000 5 per cent. non-cumulative preferred stock, making the total listed $2,500,000. The proceeds of the bonds were applied to the liquidation of the floating debt. The new preferred stock was authorized October 8, 1891, and the proceeds of this stock were also applied to liquidation of floating debt.

The regular Pullman Palace Car Company dividend of 2 per cent. has been declared payable August 15

The directors of the Edison Electric Illuminating Company have declared a regular quarterly dividend of 1¾ per cent., payable August 1.

The Ontario Silver Mining Company has declared dividend No. 204 of 10c. per share ($15,000), making $13,280,000 paid in dividends to date, payable July 31 at the office of the transfer agents, Messrs. Lounsbery & Co., Mills Building. Transfer books close July 25.

The board of directors of the Lake Erie & Western Railroad Company have declared a regular quarterly dividend of 1¼ per cent. upon the preferred stock, payable August 15.

The Quincy Copper Mining Company has declared a regular dividend of $4 and an extra dividend of $2 a share, payable August 17, to stockholders of record of July 25.

The Boston *Journal* presents a table showing that between June 20 and July 20 the shrinkage in value of 52 active stocks, including 12 copper stocks, was $143,762,484, or 12.7 per cent. Shrinkage in copper stocks was $4,658,850, or 7.4 per cent.

The following is an official statement regarding the earnings of the Hocking Valley system:

Surplus of earnings over expenses, interest and taxes for 1895	$70,856.18
Surplus of royalties after payment of interest on Ohio Land & Railway Company bonds	19,606.07
	$90,462.25
Increase in net earnings first five months 1896	126,168.15
Should the earnings for the balance of 1896 show no change as compared with 1895, there should be a surplus over all fixed charges, taxes and interest on the Ohio Land & Railway Company bonds of about	$216,630.40

This is equivalent to over 8 per cent. on the total issue of preferred stock.

The semi-annual statements of the various fire insurance companies of the United States indicate that nearly all these companies made handsome gains during the first half of the current year. The *Journal of Commerce* says that the fire insurance field offers a brighter prospect for strong companies than it has done for years.

The city auditor of Cleveland is reported as saying that "silver agitation had cost this city about $15,000 in sale of $276,000 worth of refunding bonds."

The Massachusetts Cotton Mills has declared the regular semi-annual dividend of 3 per cent., payable August 1 to stock of record July 22.

Edward Atkinson writes to the Boston *Herald* that free silver would cause our annual balance of English trade, amounting on an average to $240,000,000, to be paid us at 50c. on the dollar.

Railroads.

It is announced that the Northern Pacific Railroad Company will be sold, as contemplated, July 25.

The New York, New Haven & Hartford Railroad Company has renewed a $3,000,000 loan at 4¼ per cent. against 3½ per cent. last year. The proceeds will be applied to New England road improvements.

The Georgia Midland Railroad is hereafter to be known as the Columbus Division of the Southern Railway. The line continues under the old management, but its officers have division instead of general titles.

The annual report of the Norfolk & Western shows that during the last year the company "put 1,789,191 tons of coal into the tidewater markets, against 2,423,937 tons the previous year. The decrease was due to the coal strike."

Plans are being prepared for a railroad bridge between New York and Brooklyn. The cost of such a bridge is estimated at about $10,000,000.

The Chicago & Northwestern Railroad Company reports gross earnings for June this year at $2,932,231, which is an increase of $446,650 as compared with the same month last year.

The total shipments of dead freight out of Chicago, east-bound, last week amounted to 52,720 tons, as compared with 64,870 tons the previous week and 56,400 tons the corresponding week last year. The Grand Trunk carried 6,923 tons, the Pittsburgh & Fort Wayne 6,786 tons, the Lake Shore 6,291 tons, the Erie 5,513 tons, the Wabash 5,460 tons, the Michigan Central 5,270 tons, the Pan Handle 5,226 tons, the Nickel Plate 5,178 tons, the Baltimore & Ohio 4,396 tons, and the Big Four 1,697 tons.

The stockholders of the Wheeling & Lake Erie Railroad have voted to increase the capital stock of the road $5,000,000. The money is to be used to double track the road, increase its rolling stock and improve its equipment and terminal facilities in Cleveland, Ohio.

A scheme is reported on foot for the establishment of an electric railroad line to connect Kansas City, Leavenworth, Atchison and St. Joseph, Mo., the Missouri, Kansas & Texas Trust Company furnishing the funds for the enterprise. A representative of the company is said to have been at work for some time securing the necessary franchise. The line will be 80 miles long.

Miscellaneous.

The centennial of the founding of Cleveland was celebrated in that city Wednesday. Senator Hawley, of Connecticut, was orator of the day, and addresses were also made by Mayor McKisson, Governor Coffin, of Connecticut; Governor Bushnell, of Ohio, and Major McKinley. Announcement was made of the gift to the city, by John D. Rockefeller, of 276 acres of land, valued at $600,000, for park purposes.

The report of the Money Order Department of the New York Post Office for the year ending June 30, 1896, shows the total amount of business was $106,398,683.41. There were 2,096,445 domestic money orders paid during the year, amounting to $10,293,547.33, and 92,147 domestic orders, amounting to $1,119,015.57, were issued. There were 57,741 international orders paid, amounting to $526,520.93, and 27,104 international orders, amounting to $447,601.88, were issued.

A Washington dispatch says: "The engineers of the navy are gratified to learn through our official sources of information in Germany that that government has decided to adopt the American idea of the triple screw for warships. The project, when suggested by Engineer-in-Chief Melville, met with some opposition."

The most formidable fleet of American war vessels ever assembled will sail in a few days from New York for evolutionary drill and practice at sea. The fleet will include thirteen vessels, led by the New York.

Foreign.

Trade returns of the Dominion of Canada for the last fiscal year show that the exports for 1895-96 aggregated $118,140,501 and the imports $110,587,808.

The French government on July 18 was to issue a decree increasing the customs duties upon all foreign sugars, to go into effect on August 1, currently with the new German Sugar act. It raises the duty from 7 francs to 10½ francs upon raw sugars and from 8 francs to 12½ francs upon refined sugars.

An international competitive exhibition of filters for wines and appliances for wine making will be held at Catania, Sicily, during September, under the auspices of the Italian Ministry of Agriculture. The prizes consist of diplomas of honor, gold and silver medals. The ministry will make purchases of filters and appliances that gain first prizes. Applications must reach the committee at Catania by August 31. Particulars may be obtained from the Œnotechnic Station of the Italian government, 24 State street, New York.

An English exchange says: "It is quite a new departure for colonial capitalists to come forward to take English undertakings in hand. Such a reversal of the order of nature has occurred at Birmingham, where the city council has granted a twenty-one years' lease of the central tramways to what is described as a Canadian syndicate. The syndicate undertakes to abolish steam traction—which is an intolerable nuisance in the streets of Birmingham—to introduce halfpenny fares, and to shorten the hours of the employees."

The Agricultural Congress, which will meet at Budapest on September 17, will discuss, at the request of the Hungarian government, the questions of the establishment of a silver currency, the desirability of an international agreement, and the ratio of metals.

A Hermosillo, Mex., dispatch says: "The Rothschilds have just closed a deal for a group of the richest gold mines in this state. The reported purchase price for the properties is $5,000,000 in gold."

The official annual returns of the trade and navigation of France show that the "general" trade of the republic in 1895 was of the estimated value of 9,509 million francs, being an increase of 589 millions on the trade of 1894 and a decrease of 260 millions on the average of the last quinquennial period. The "special" trade shows a total of 7,094 million francs, 3,720 millions standing for the import trade and 3,374 millions for the export trade, being a decrease of 130 millions in the imports and an increase of 296 millions in the exports. In order to arrive at the real significance of these figures, however, it is necessary to go back a few years, and it is found that in the year 1889 the value of the export trade was 3,704 millions, in 1890 it was 3,753 millions, and in 1891 it was 3,758 millions. In 1892 the tariff dicussions disturbed the commercial relations of France with other countries, and the effect was so disastrous that in 1893 the value of the export trade fell to 3,078 million francs.

British foreign trade returns for June "are satisfactory, especially with regard to the exports of British and Irish produce, even after allowing for the fact that the past month contained 26 working days, compared with 24 in June, 1895. The imports are valued at £35,229,255, which is an increase of £1,334,671, or 3 9 per cent., and the exports of British and Irish produce at £20,530,053, an increase of £2,729,953, equal to 15.3 per cent.; but the exports of foreign and colonial merchandise have declined by £596,797, amounting to £4,668,976, the decrease being due to the reduced shipments of sheep's wool. For the six months the imports have increased by £12,793,335, or 6.2 per cent., and the exports of British and Irish produce by £12,885,206, or 12.1 per cent. These figures show that the external trade of the kingdom has well maintained the revival which set in about this time last year."

June exports of British linen piece goods "have also declined, the United States demand having fallen off. The woolen trade appears to be better than for the past few months, other markets than the United States having been found."

British imports of oxen and bulls during June "are still at a high level, and, as usual, the increase is chiefly from the United States. Sheep, however, are fewer for the month, but for the six months the numbers are equal to those of last year. The receipts are large of wheat, although a little below those of last year, but wheat flour has fallen off considerably. Wheat from the United States amounted to 3,800,000 cwt. compared with 2,100,000 cwt., and this increase is evidently due to the desire to clear off the old stocks before the new crop comes to hand."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Homestead—Exemption—Oklahoma Law.

In the case of Medford vs. Painter, recently decided by the Supreme Court of Oklahoma Territory, the appellant sought to hold a large brick post-office block as a homestead exempt from execution, he having moved into the block and established his residence there. The court rendered a decision in his favor, declaring that such was the law, even if the defendant did occupy the property as his residence for the purpose of defrauding his creditors. The court said that it was for the legislature to cure the evil of the statute; the court had to apply the law as it stood.

Partnership—Accounts—Entries.

The Kentucky Court of Appeals held, in the recent case of Bannon vs. Hawkins, that in an action for an accounting between partners, in which the plaintiff alleged in his petition that defendant was to keep the accounts and had refused to permit plaintiff to examine the books or to make a settlement with him, an answer setting up the condition of the partnership and the liability of the one to the other in the conduct of the partnership business required no reply, and that while the entries in partnership books are prima facie correct, yet when an error is shown to have been committed it should be corrected, and the error may be established by other books connected with the partnership.

Corporation—Stock—Transfer—Fraud.

The Kentucky Court of Appeals held, in the recent case of Simrall vs. Williamson, that in an action to cancel the transfer made by plaintiff of certain shares of stock in a corporation to the president of the corporation, upon the ground that the transfer was procured by false and fraudulent representations and concealment of material facts, the chancellor properly held that the representations of the defendant were such as would entitle plaintiff to relief, but erred in holding that he had been guilty of such laches in asserting his right as to preclude him from recovering, the evidence showing that plaintiff had no knowledge of the fraud until a short time before he instituted the suit.

Partnership—Debt—Creditor—Fraud.

The Supreme Court of Georgia held, in the recent case of Poe et al. vs. Ellis, that where a partnership composed of two persons had pledged to a creditor as security for a debt certain goods to be manufactured by the partnership, and had covenanted to ship the same to such creditor, to be sold and the proceeds applied in satisfaction of the debt, and one of the partners, after the manufacture of the goods, delivered the same to a third person who had full knowledge of all the facts, such delivery being the result of a collusive and fraudulent scheme between that partner and the third person, the purpose of which was to defraud the creditor and the other partner, the latter could maintain for the creditor's use an action against the third person for the goods thus converted or their value.

Lien—Laborer—"Woodsman."

The Supreme Court of Georgia held, in the recent case of Cole et al. vs. McNeill, that one who was employed as a "woodsman," and whose duties as such included overlooking the superintending a large number of ordinary hands engaged in turpentine operations, who had authority to employ and discharge these hands, who also worked in a commissary in the capacity of clerk, and who was employed for his skill in rendering services which obviously required mental and business capacity rather than the mere power to do manual toil, these services consisting much more largely of "head work" than of "hand work," was not a laborer entitled under section 1974 of the code to foreclose a lien as such, although in point of fact and of necessity he did in the performance of his duties a considerable amount of manual labor and often became physically fatigued.

Express Company's Liability—Bonds.

In the case of The United States Express Company vs. Koerner, recently decided by the Supreme Court of Minnesota, it appeared that the defendant delivered to the plaintiff express company at St. Paul, Minn., to be carried to Washington, D. C., a sealed package containing twenty registered United States government bonds of the value of $234,000, informed it that the value was $1,000, concealed from it that they were of greater value, and paid for carrying the same 75c., which was the usual price for so carrying such a package of the value of only $1,000. In an action to recover additional compensation the court held that in case of loss the limit of plaintiff's liability was for failure to deliver $1,000 worth of such bonds, and it was not entitled to recover on the theory that in case of loss the limit of its liability was for failure to deliver the whole $234,000 worth of bonds, and that it was entitled to recover compensation for any increase of risk within $3,000 limit, caused by the fact that it handled and carried so valuable a package.

Municipality—Debt—Bonds.

The Supreme Court of Indiana held, in the recent case of Myers vs. City of Jeffersonville et al., that the constitutional provision that no municipal corporation shall incur any indebtedness in excess of "2 per centum of the value of the taxable property within such corporation" does not invalidate any part of a debt in excess of such ratio contracted prior to March 14, 1881, when such provision went into effect, nor render invalid any bonds issued for the purpose of refunding such debt; that the issue of bonds of a city to take up bonds issued in payment of an expense which the city had no authority to incur may be enjoined by a taxpayer; that the holder for value and without notice of the bonds of a city issued entirely without authority of law cannot enforce them against the city, and that bonds issued by a city to pay for purchasing a lot and building a court-house for the county in which it is situated are, in the absence of express authority on the part of the city, unauthorized and void.

Receiver—Appointment—Indiana Law.

The Supreme Court of Indiana held, in the recent case of The State of Indiana vs. Union National Bank et al., that one who is not made a party to a petition for the appointment of a receiver, but who, upon obtaining leave to intervene, moves to set aside the order of appointment, may appeal from a judgment denying his motion, under section 1231 of the Revised Statutes of 1881; that causing a non-resident attorney, or a person claiming to be such, to sign and deliver to the plaintiff in an action for the appointment of a receiver an answer confessing the truth of the complaint, and consenting to the appointment of a receiver, in order that the plaintiff's attorney may present complaint and answer to the judge, does not constitute an "appearance" on the part of the defendant, and that the statute confers upon the court no right to appoint a receiver for the property of an individual, except as an aid to the relief sought in a pending action to obtain some other relief.

Insurance—Beneficiary—Creditor.

The case of Hale vs. Life Indemnity and Investment Company, recently decided by the Supreme Court of Minnesota, arose upon an action on a life insurance policy assigned by the insured to the plaintiff, his creditor, as "interest may appear." The court held that the plaintiff had an insurable interest in his life, and continued to hold the policy as security for her debt, although she surrendered the original note evidencing her debt and took other notes of the assured, and that the evidence was sufficient to sustain a finding that the new notes were taken in lieu and not in payment of the original note and debt; that the plaintiff, if entitled to recover on the policy, was entitled to the full face value thereof, although a part of her debt was not due at the time of the trial; that the issue being whether a person did a certain act, for example, committed suicide, his declarations, made at or about the time he was alleged to have done the act, to the effect that he intended to do it were admissible as original evidence if made under circumstances precluding any suspicion or misrepresentation, but that such declarations made two years before the alleged act were too remote, and that the trial court did not err in excluding them; that certain rulings of the trial court excluding evidence as to the declarations of the assured as to his health made prior to his appliion were, if erroneous, corrected by afterwards allowing the defendant to prove such evidence; that where the defendant offered in rebuttal certain written statements of the assured as to his intemperate habits, these admissions at the time they were offered was a matter of discretion with the trial court, and that it did not err in excluding them; that where the court instructed the jury that the presumption was that the policy was valid until the contrary was made to appear, and added, "This is only one form of saying that the burden of proof rests on the defendant and not upon the plaintiff to show that the policy is not a legal and binding contract as it purports to be," the instruction, as a whole, was not erroneous, and that where the assured warranted the truth of his answers made in his application, and the trial court instructed the jury that he was bound to answer accurately so far as he undertook to answer, but that his warranty could not be extended beyond his answers as actually given, the instruction was correct.

BUSINESS NOTES.

What Silver Standard Means.

Leopold Zimmermann, the bullion dealer, says in the New York *News Letter:* "We have had a great many inquiries, principally from the south and west, for new Mexican dollars. The purpose of the would-be buyers is to give the workingmen in their employ a practical demonstration of the fallacy of the free silver theory. These dollars cost the purchasers 55c. each. They are paid to the workingman in double the quantity of American dollars due him. When he proffers these dollars to the tradespeople from whom he wishes to buy goods, he is surprised to find that they are accepted at only 50c. each."

One Toothpick Industry.

The *Northeastern Lumberman* says: "In Harbor Springs, Mich., there is a large and flourishing wood toothpick industry. White birch is exclusively used in the manufacture of the toothpicks, and about 7,500,000 are turned out daily. The logs are sawed up into bolts each 28 inches in length, then thoroughly steamed and cut up into veneers. The veneer is cut into long ribbons three inches in width, and these ribbons, eight or ten at a time, are run through the toothpick machinery, coming out at the other end, the perfect pieces falling into one basket, the broken pieces and refuse falling into another."

Swiss Commerce.

The London *Times* says: "The returns for the year 1895 show a considerable expansion of commercial activity in Switzerland, especially on the side of imports. In 1895 these reached a total of £36,634,096, as against £33,035,334 in 1894, while the exports rose in the same period from £24,847,971 in the earlier year to £26,534,407 in the later. Imports increased with Germany and France to an almost equal extent, and with Italy to a slightly lower amount, but with Austria-Hungary there was a material decline. The exports to England increased to half a million sterling, and to the United States by three-quarters of a million."

Railways in Asiatic Russia.

The Russian government is stated by the Siberian journal, *Region of the Steppes*, "to have at last decided the question as to the route of the railway connecting the Transcaspian and Samarcand line with that of Siberia in favor of the claims of Orenburg. The paper mentioned says that with this object a railway is to be built as soon as possible from Tashkend to Orenburg. Recent heavy floods on the Usuri river, which is stated to have risen 30 feet, have done much damage to that part of the railway to Vladivostok which passes down the valley of that stream. Further floods on the Amoor near Blagovestchensk have washed away the telegraph poles for many miles, and telegraphic communication by the Russian line to the Far East has consequently been interrupted."

Six Months' Copper Output.

The *Engineering and Mining Journal* says: "The figures of copper production and export for the first six months of this year, although more or less anticipated by the monthly statements, make a wonderful showing. The importance of the foreign market to take our surplus product never found such an illustration before, as our home market would have been entirely swamped by the home output. The total increase in the United States production was 11,668 long tons, or 14.6 per cent., and the increase of exports, far in excess of the increase in production, amounted to 74.1 per cent." English and French stocks were "30,729 tons on June 30, and the quantity afloat from Chili and Australia 5,550 tons, making a total of 36,279 tons, as against 36,901 on May 31, thus showing a small decrease of more than 300 tons during the month, and a decrease of 22,236 tons as compared with July 1, 1895."

Japanese Trade Extension.

Sho Nemoto, special commissioner from the government of Japan, arrived at San Francisco July 19, "to study the prospects for the extension of commerce by Japanese steamship lines to Mexican, Central American and South American ports on the Pacific coast, and also to consider the advisability of securing cotton from the south, kerosene from Pennsylvania and eastern-made machinery directly through San Diego for transportation to Japan by one of the several prospective steamship lines. With the government commissioner is T. Kusakado, a representative of the Japanese Colonization Company, which purposes through these two men to consummate the purchase of 300,000 acres in the state of Chiapas, in the southwestern part of Mexico. The idea is to divide the land into small sections of twenty acres and assign a section to each Japanese family. Some coolies will be employed, but the main purpose is to introduce family life and encourage the colony to cultivate coffee, cotton, tobacco and sugar. 'My business,' said Mr. Nemoto, 'is to investigate the industrial conditions in Mexico, Central America, Peru and Chili. We want to learn what the prospects are for Japan at the ports of those countries, not only in shipping our goods, but the importing for our own markets. I shall not neglect the United States, which is the best friend we have. We now purchase all our kerosene and much of our cotton here. While my investigations are not for the steamship line, the information I hope to obtain will guide in a measure the action of our Parliament in subsidizing a new steamship company.'"

A Word to Shipowners.

The Glasgow (Scotland) *Mail*, writing on the question of freights during the past six months, shows that the last half year has been one of unprecedented depression and unequaled in the annals of shipping. It is almost trite to say, remarks this authority, that shipping is passing through an ordeal never experienced by any shipowner. "When the 'tide will turn' is more than we can say. It certainly will not be neither this nor next year. The tonnage afloat in excess of shippers' requirements, as we have often said, must be greatly reduced ere this can be brought about, but the building gives no hopes of this being done in the near future. Instead of a reduction there is a steady increase month after month, and so long as this continues it is utterly hopeless to look for any improvement. Shipowners have the freight market very much in their own hands, but unless they grasp the situation very differently from what they have been doing, they cannot expect, nor will they obtain, any amelioration of the depression which has so long continued."

Canada's Forest Wealth.

The *Northeastern Lumberman* says: "The forests of Canada have supplied more or less the wants of Europe for centuries. From the earliest days of its occupation by the French, the forest wealth of the country washed by the St. Lawrence engaged the attention of the government of France, who saw therein vast resources available for their naval yards. They drew from these forests large numbers of masts and spars, and issued stringent regulations for the preservation of the standing oak. When the country was first ceded to Great Britain, but little attention was paid at first to its vast timber supply, owing to the fact that almost the whole of the Baltic trade was carried on in British bottoms, and that the timber of northern Europe provided an unfailing and convenient return freight for the shipping thus engaged. When, however, the troubles of the Napoleonic era commenced, and especially when the continental blockade was enforced, the timber supplies of the Baltic becoming uncertain and insufficient, attention was directed to the North American colonies, with the result of increasing the quantity of timber which reached Great Britain from 2,600 tons in the year 1800 to 125,300 tons in 1810 and to 308,000 tons in 1820. In 1895 the amount exported to the United Kingdom showed a total of 1,310,685 tons."

Interstate Commerce Report.

The report of the Interstate Commerce Commission for the year ending June 30, 1895, shows the total railway mileage in the country on that date to have been 180,657 miles, an increase of 1,948 miles. During the year 14 roads were abandoned, 9 merged, 32 reorganized and 28 consolidated. There appears from the report to have been a decreased efficiency in passenger service and an increased efficiency in freight service during the year, and an increase in the number of men employed by railways of 5,426 as compared with the previous year. There was an increase in the amount of railway capital during the year aggregating $188,729,312. The gross earnings of the railways for the year ending June 30, 1895, were $1,075,371,462, an increase of $2,009,665. Passenger revenue was $252,246,180, showing a decrease of $33,103,378. Freight revenue increased $30,502,549. The number of railway employees killed during the year was 1,811 and the number injured was 25,696, a decrease of 12 killed and an increase of 2,274 injured as compared with the previous year. The number of passengers killed was 170, number injured 2,375, showing a decrease of 154 in the number killed and 659 in those injured. The statistician recommends that Congress be requested to provide for a bureau of statistics and accounts, which shall have the right of inspection and control over accounting departments of the common carriers.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Telegraphic and mail advices from commercial and industrial centers indicate a more unsatisfactory state of trade. Jobbers and retail houses show still further caution in the matter of securing supplies, buying for actual needs to a degree not heretofore reported. There is no outlook favoring an early revival of trade, while the volume of sales continues light and prices low, with a further restriction of credits. The general money market is dull, due not only to caution on the part of banks in discounting, but to a falling off in demand. Unfavorable crop reports from Nebraska have caused cancellation of some orders, and long-continued rains in Tennessee have checked business there. Louisiana reports the new rice crop short, and eastern Washington and Oregon that the long-continued dry season has had an unfavorable effect on the wheat crop. The single favorable feature in Chicago's trade situation is moderately increased orders for dry goods and hardware; almost every other line is quiet or depressed. Relatively few St. Louis salesmen are on the road, and few others will start out soon. Omaha's clothing trade is brisk, but other lines are slow. Relatively favorable advices are from Baltimore, where orders in general lines are fairly satisfactory and the volume of business is larger than in the like portion of 1895, and from Galveston, where business generally promises improvement.

The regular quarterly comparison in BRADSTREET'S of prices of 108 staple products, produce, etc., for five years, makes it plain that values have not materially recovered from the depression reached since the panic of 1893. Compared with July 1, 1894, when trade was greatly depressed, there are 40 increases in quotations on July 1 this year, about one-quarter being agricultural products, notably wheat, cotton and sugar. Other advances are for iron, steel, coal, hides, brick, glass, drugs and chemicals. Contrasted with July 1, 1895, at which there was a general advance in demand and quotations, prices on July 1 this year show only 32 increases; contrasted with July 1, 1893, only 18 out of 108 items for which prices are given show advances to-day, notably drugs, chemicals, hides, copper, petroleum, hay, flour and rice. Compared with July 1, 1892, when general trade was prosperous, only 22 quotations appear higher, including most of those last named. Aside from petroleum, some of the more important, drugs and chemicals, rice, cotton and hay, and a few minor agricultural products, the range of prices of staples on July 1, 1896, continues below the level reached at or just prior to the panic of 1893.

The industrial situation is somewhat more depressed, particularly in iron and steel, prices for most varieties of which, notably southern pig iron, are shaded. The encouraging feature in iron and steel is the extent to which stacks have blown out. There is an increase in the number of striking employees in several lines, but the new scale of wages asked by the iron and steel workers has been largely acceded to. Production is materially curtailed among manufacturers of woolens and cotton, as heretofore, and in locomotive, hardware, silver, jewelry and lumber industries. Shoe factories are busy, mostly on old orders. Eastern wool dealers report no demand, and some leading houses refuse to increase stocks either by purchase or consignment. The principal activity in the dry goods trade appears to consist of preparations to show fall goods.

Bank clearings throughout the United States aggregate $989,000,000 this week, about 5 per cent. more than last week, and 7 per cent. more than in the corresponding week one year ago. The contrast with the like week in July in 1894, when business was extremely depressed, is more marked, showing an increase of 28 per cent., and as compared with the like week in 1893, this week's total shows an increase of 11 per cent. Contrasted with the corresponding total in 1892, bank clearings for the past six business days are smaller by only a fraction of 1 per cent. The noteworthy advances in quotations this week are for wheat, flour, oats, cotton and petroleum, while decreases are shown in Indian corn, pork, lard, coffee, sugar and print cloths. Business failures for the week number 280 throughout the United States, against 255 last week, 239 in in the week a year ago, and 237 in the week two years ago.

The disorganizing tendencies of the New York stock market have been checked by the action of the New York banks in turning over some $17,000,000 of gold to the Treasury in exchange for legal tenders, and increasing the government gold reserve to $105,000,000. No less important is the action of the foreign bankers and drawers of exchange, who have appointed a committee, headed by Mr. J. P. Morgan, to formulate a plan to minimize gold exporting. It is reported that a banking syndicate to draw $50,000,000 to $75,000,000 of exchange will probably be formed. Gold exports this week are $5,050,000, but no gold will be shipped to-day, and exchange rates have fallen from 4.89 to 4.88½ for demand sterling. These arrangements have measurably dispelled the panicky feeling and distrust, checked the disposition to hoard gold, and caused a reassertion of confidence. Prices of securities, after breaking to a level, in some cases below the quotations of the panic of 1893, have rallied on short covering. Some further recessions were recorded on the indorsement of the free-silver candidate by the Populists and the prospect of a gold standard Democratic candidate. The speculative market is feverish and irregular, with professional interest and stock market bears the chief buyers. London bought steadily and heavily on the break, but is disposed to realize on the rally.

Exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal amount to 3,073,000 bushels this week, as compared with 2,963,000 bushels last week, 1,265,000 bushels in the corresponding week in 1895, 3,388,000 bushels in the like week in 1894, and with 4,363,000 bushels in the corresponding week of 1893.

In the Canadian Dominion general trade shows no material change. At Toronto business is quiet and cotton goods are lower. The crop outlook in the Province of Ontario is fairly satisfactory. Wholesale trade at Montreal about equals in volume that in the like portion of 1895, although cotton and woolen manufacturers in the Province of Quebec report trade less active. The favorable exception is at the city of Quebec, where general business is somewhat more satisfactory and the crop outlook more favorable than a year ago. At Halifax the volume of wholesale trade is light, but crop prospects throughout Nova Scotia are satisfactory, as they are in New Brunswick. Reports concerning the Newfoundland fisheries are more encouraging. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $20,550,000 this week, compared with $19,427,000 last week and $19,879,000 in the week one year ago. Contrasted with the corresponding total in 1894, this week's aggregate shows a decrease of 10 per cent. There are 31 business failures reported throughout the Dominion of Canada this week, against 33 last week, 25 in the week a year ago, and 32 in the week two years ago.

FINANCIAL.

The Money Market.

The effects both of the reduction of the Treasury gold reserve to below $90,000,000 and of the combined effort of the banks and bankers here to restore it to the $100,000,000 and to check unnecessary drains through shipments to Europe have not been very marked in connection with the New York loan market. An undercurrent of anxiety, however, existed in financial circles prior to the events in question, though banks have acted conservatively, and little calling of loans was resorted to, in spite of the shrinkage of security values. Rates have been comparatively steady, the quotation for call loans on the New York Stock Exchange rising only to 3 per cent., and the bulk of the week's transactions have been at 2@2½ per cent. There is still a demand for long time accommodation, and 5@6 per cent. are quoted for the same, while some sterling loans are said to have been made since Wednesday last. There is, naturally, some scrutiny of collateral, the rate for thirty to ninety-day loans being 4@4½ per cent. Mercantile paper is very quiet, with only occasional offers of choice names, the nominal quotations being on the basis of 5@6 per cent. for doubles, and the tone of the market is described as firmer.

The New York Banks.

The statement of averages issued from the Clearing House for the week ending last Saturday showed no changes of any importance outside of a gain of over $2,300,000 in loans, and an augmentation of the average deposits of about $2,500,000. The reserve holdings were almost stationary, and the surplus displayed a decrease of less than $500,000. The figures of the statement compare as follows with those of the preceding week:

	July 11, '96.	July 18, '96.	Changes.	
Loans	$477,152,900	$479,540,900	Inc.	$2,388,000
Specie	61,950,800	62,333,400	Inc.	382,600
Legal tenders	86,158,500	85,937,400	Dec.	221,100
Deposits	503,488,100	505,991,100	Inc.	2,503,000
Circulation	14,595,800	14,599,400	Inc.	3,600
Total reserve	148,109,300	148,270,800	Inc.	161,500
Reserve required	125,872,025	126,497,775	Inc.	625,750
Surplus reserve	22,237,275	21,773,025	Dec.	464,250

At the corresponding date a year ago the surplus reserve was $33,405,300, against $73,941,375 in the corresponding week of 1894.

The Boston Banks.

	July 18, '96.	July 11, '96.	Changes.	
Loans	$162,642,000	$162,027,000	Inc.	$615,000
Circulation	9,937,000	9,960,000	Dec.	23,000
Deposits	101,165,000	100,554,000	Inc.	611,000
Due from reserve agts	21,073,000	20,945,000	Inc.	128,000
Legal tenders	7,700,000	7,712,000	Dec.	12,000
Specie	8,911,000	8,787,000	Inc.	124,000
Surplus reserve	2,808,943	2,854,657	Dec.	45,714

Silver.

The silver market has been dull and steady, and no features of interest have developed in the market either here or in London. Quotations for bar silver

have been practically unchanged throughout. Dealings in silver bullion certificates on the Stock Exchange were 292,000 ounces in amount, at from 69⅝c. to 68⅞c.

Foreign Exchange.

The nervous appearance and rising tendency of exchange rates at the opening of this week was checked by the action of the large exchange bankers in taking steps to combine against unnecessary gold withdrawals at this juncture. Up to Wednesday noon, when the meeting of these interests was held, the market had been decidedly strong and higher, the features being a scarcity of bills and a very sharp demand from remitters, while bankers were somewhat inclined to restrict their drawings. London's large purchases of stocks in our market on Tuesday supplied some exchange, but the market absorbed them readily, as it also did the drawings against gold shipments. These amounted in the week to $5,050,000, of which $3,050,000 was taken on Monday for shipment the succeeding day, while $2,000,000 engaged on Wednesday went forward on Thursday. The tone of the market, however, underwent a sharp change on Wednesday, when the success of the plan to restore the Treasury reserve by aid from the banks was assured and the meeting of the foreign bankers for the purpose referred to above was held. Though no definite step was taken beyond the appointment of a committee to decide on a plan of action, the exchange market at once weakened and the eager demand fell off. The actual rate for demand sterling, which had been as high as 4.89 on Monday and Tuesday, fell by Thursday to 4.88½, and the posted quotations were marked down ½c.—to 4.88@4.89. On Friday the market was dull and narrow, but slightly firmer, at 4.88½@4.88¾ for demand bills on London. Some few loan bills have been on the market during the past few days.

4.88	4.88	4.88	4.88	4.87¾	4.87¾

Closing quotations on Friday for other classes of bills were: Cables, 4.88¾@4.89; commercial bills, 4.86¾@4.87; francs, 5.16¼@5.16⅞; reichsmarks, 95⅜@95⅞.

The Bank of England discount rate remains 2 per cent. The bank this week gained £62,000 specie. Its reserve is now 59.45 per cent. of liabilities against 59.16 per cent. last week. In the London open market discount is quiet at ½@⅝ per cent., and call money is ¼@½ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending July 17, 1896:

	1896.	1895.
Dry goods	$2,198,706	$2,819,806
General merchandise	5,613,137	6,717,759
Totals for the week	$7,811,843	$9,537,565
Previously reported	261,179,309	280,669,196
Since January 1	$268,991,152	$290,206,761

The exports (exclusive of specie) from New York to foreign ports for the week ending July 21 were $64,064 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$6,935,337	$5,380,323
Previously reported	208,278,173	186,366,693
Since January 1	$215,213,510	$191,747,016

THE STOCK MARKETS.

The New York Stock Market.

This week has brought a decided change in the temper of speculation. The action of the New York banks in agreeing to replenish the diminishing Treasury reserve by surrendering part of their own gold holdings in exchange for legal tenders, followed up by the actual deposit of $16,000,000 of such gold, has brought the reserve up to $103,000,000 and checked the growth of a panicky feeling in the securities market. This has, to a very large extent, checked the tendency to hoard gold that was apparent in many directions. Equally important was the step taken to secure concerted action by foreign exchange houses for the restriction of gold exports. These developments came at an opportune moment, with quotations still crumbling and liquidation and bear selling in full progress. London was, indeed, a very heavy buyer at the severe decline early in the week, though the action seemed to have no effect so far as encouraging outside interest and participation is concerned. In fact, the market, but for the presence of a few "bargain hunters" and purchasers for cash, was almost bare of demand, and the operators on the short side of the account met with no resistance in their efforts to hammer down prices. The events in question, however, changed the situation, and it is a subject of general remark that, in spite of the dedication of one of the great national parties to the cause of unsound money and virtual repudiation, there are once more two sides to speculation. The short interest, which had become very extensive, has, indeed, furnished nearly all of the buying power by which the irregular rallies since Wednesday have been produced. The market is also a professional one, and the chief activity is in stocks that serve as mediums for dealings among the room traders and regular stock market operators. London's part in the proceedings early in the week has been referred to, and it remains to be said that in the last few days there has been some disposition there to realize profits, which contributed to the unsettled state of the market at this time. The Populist Convention at St. Louis and the prospect that it would indorse the free-silver candidate nominated at Chicago has not been lost sight of. The bond market has suffered in sympathy with the stock list, and dealers report that municipal bonds are virtually unsalable, corporations and individual capitalists being unwilling to make purchases. On Friday the market was more reactionary in tone, and prices suffered under the absence of short covering and London purchasing. Shortly after midday it assumed a very discouraged appearance and yielded readily to moderate pressure, but before the close rallied on short covering by the room traders.

The activity of the week has been well distributed throughout the list, and the volume of the trading, no less than the marked weakness in some instances, was calculated to attract attention. Burlington & Quincy, for instance, sold down to 62⅛, the lowest price in years. Rock Island touched 52½ and Chicago Gas fell to 49½, while in Sugar, Missouri Pacific, Manhattan and other speculatives the declines were correspondingly marked, the rallies, though considerable, failing in most cases to restore prices to the level of a week ago.

Boston Stock Market.

The market has been more or less excited during the week, and some active stocks have sold down. Atchison and Chicago, Burlington & Quincy close about steady, but New York, New Haven & Hudson River have declined 5¼. Boston & Montana has shown considerable activity, with prices down 5½ points. General Electric closes over 4 points higher, with Sugar active and the price 1⅛ points up for the week. Bay State Gas shows a slight decline and good business. United States Leather preferred closes about steady.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending			
	Price July 23, 1896.	Price July 16, 1896.	Sales July 23, 1896.	Sales July 16, 1896.

TRADE AND INDUSTRY.

A SMALLER VOLUME OF BUSINESS IN MOST LINES THAN HERETOFORE.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, July 24.—The market for all kinds of merchandise continues dull, with conditions largely of a waiting character. The money market remains dull, and outside of call money it is practically impossible to quote rates, as they depend almost entirely on special conditions. There is little first-class paper making. Renewals are quoted at 5@6 per cent., while strongest collateral loans could be placed at 5@6 per cent. for four and six months. The boot and shoe market is dull, but the factories are generally busy on old orders. Leather is dull but steady, with hides maintaining a steady tone in the absence of eastern demand.

Providence, July 24.—Dull trade and curtailment of production continue to characterize many of the industries in this region. This is especially true of the manufacturers of cotton and woolens, locomotives, hardware, silverware, jewelry, etc.

Philadelphia, July 24.—There are no indications of a break in the general dullness in all branches of trade. The advance in the price of coal has not stimulated sales as anticipated, and consumers are holding off. Iron quiet and low prices prevail; no demand except for immediate use. General complaint is made regarding the slowness and difficulty in making collections. Scarcity of money seems to prevail among country merchants.

Pittsburgh, July 24.—No improvement is noted since last week, and business in all lines continues quiet. Dealers, generally, are showing a disposition to be more cautious, and are ordering for present needs only. Collections are still reported unimproved. The raw iron market here is practically at a standstill, and very few sales are reported. A number of furnaces in the valley district have shut down, and several local furnaces are preparing to follow suit. Prices are unchanged, but the trade generally express the opinion that the outlook is not promising of any revival in the business for some time to come.

Baltimore, July 24.—Jobbers report orders satisfactory and the week showing a marked improvement in fall orders. Season so far shows a slight increase over same time last year. Collections seasonable.

West and Northwest.

Cleveland, July 24.—Trade for the week is without special new feature. Traffic generally continues quiet and along conservative lines.

Cincinnati, July 24.—General business depressed.

Louisville, July 24.—Jobbers report some improvement in dry goods, saddlery and harness. Other lines are quiet. A movement is being made, with some likelihood of success, among distillers of this state to suspend the production of whisky for eighteen months. Collections reasonably good.

Detroit, July 24.—Trade in jobbing lines continues dull. In lumber the volume is unusually light. Collections are slow, low prices prevailing for all products.

Chicago, July 24.—There has been a slight increase in sales of dry goods during the week, but with clothing men trade is quiet, except in the way of securing orders for fall goods. They are coming from nearly all sections except Nebraska, where there has been some cancellation of orders, owing, in a few localities, to the disappointment over the crops. Sales of light hardware are larger, but of heavy iron goods only fair. Orders for steel rails are coming in moderately, but for other descriptions of steel there is no call of consequence. Pig iron is dull and easy, and to make sales concessions are necessary. Leather is steady, with no new features. Lumber and building materials are selling below the average of former years and prices are easy. Potatoes and eggs have advanced and butter has declined. Fruits are abundant and prices low. Wool receipts 3,060,705 pounds. The banks are prepared to help the Treasury out in maintaining its gold reserve. Estimated holdings of national, state and private banks here $28,000,000 in gold.

St. Louis, July 24.—There is a fair movement of seasonable goods, but transactions are of the hand-to-mouth character and totally devoid of speculation. A majority of salesmen are at home on vacations and for other reasons, and are in no hurry to revisit their trade. With but few exceptions values are low, concessions being granted in nearly all lines. Manufacturers of furniture are doing but a small business, and several factories have been practically shut down for some time. Hides and leather continue strong, with a corresponding strength in boots, shoes and harness. Wool is dull. Sales of lumber are decreasing. A slight improvement in demand is noted for finished iron and steel, notably bridge and structural material, but values are unchanged.

Kansas City, July 24.—Trade is quiet. Collections slow.

Omaha, July 24.—There is a brisk demand for manufactured clothing and a steady trade in groceries. Trade in other lines shows but little life. Collections are coming in very slowly.

Milwaukee, July 24.—There is no change in trade conditions. The volume of business is quite light and collections are slow.

St. Paul, July 24.—Orders for staples remain about the same as a week ago, particularly groceries and hardware, but there is a noticeable disposition to hold off placing orders for winter goods and an inclination on the part of dealers to restrict credits. The latter is attributed to the financial uncertainty. Collections are fairly good, considering the season of the year.

Minneapolis, July 24.—Jobbers in most lines report present shipments of merchandise about same volume as is usual at this season. Advance orders for seasonable goods are in some lines satisfactory, though in others merchants show a disposition to delay.

Duluth, July 24.—Uncertainty as to the future financial policy of the government has had a rather unfavorable effect on business in all lines, which is being conducted very conservatively. Lumbermen are complaining and some of the mills are likely to close down for the season. The crop reports are unfavorable.

Sioux Falls, July 24.—Another quiet week in business circles. Harvesting is well along. The yield will be good, but low prices check trade. Collections are fair.

Southern Cities.

Birmingham, July 24.—General business is featureless, no improvement being noted over last week. Crops in this section are looking well.

Atlanta, July 24.—No material change is noted in the state of trade. Collections are fair.

Memphis, July 24.—General trade is quiet. Collections are only fair.

Charleston, July 24.—The trade report business in all lines about the average. Crops are still reported good.

Augusta, July 24.—Jobbers of groceries and provisions report trade of fair proportions. Collections in all lines are poor, but not unusually so for this season.

Savannah, July 24.—Trade and collections are dull. Naval stores market is about the same.

Chattanooga, July 24.—Business continues reasonably good. Smaller merchants are spending a good deal of time talking politics. Collections are fair. The rise in the river has brought in much lumber, and mills are now well supplied.

Nashville, July 24.—Trade remains quiet. Country collections are fair. Continued rains, covering three weeks, have retarded business. The market

is fully supplied with money, lenders discriminating in choice of names and collateral. Demand for money more restricted than for some time. There is a fair demand for good investment bonds. Bank stocks show some decline.

New Orleans, July 24.—Prospects of the sugar and cotton crops continue favorable. The general trade are placing more orders, but conservatively. Trading in cotton is light. The demand for sugar is sluggish, but holders are not offering freely. The new rice crop is estimated very short. The market is steady at the advance, but the undertone is easier.

Galveston, July 24.—Trade generally shows signs of improvement, and the outlook for fall business is encouraging.

Pacific Coast.

San Francisco, July 24.—Commercial markets are quiet, with prices steady. Wheat freights nominal. Business in hops lighter. Produce and grains still continue dull. Fruits for shipment are in good demand.

Portland, July 24.—The week has closed very quiet in all lines. Crop prospects in eastern Washington and Oregon are very poor, and many complaints are heard concerning the dry season. Fruit will yield but little, and wool is at a low figure. Collections in general are all but fair.

Tacoma, July 24.—Reports from the wheat districts are less favorable this week, damage from heat proving considerable. Statistics for the half year show lumber shipments from the entire state by rail increased 50 per cent. over the same period last year, and shingles 8 per cent. The rail trade is now rather quiet. Cargo trade holds up well.

Seattle, July 24.—Considering the season general trade holds up very well. While the rains last week benefited the crops to some extent in certain sections, continued hot weather has affected them unfavorably. Forest fires are doing considerable damage to timber. Seattle has been decided on as the terminal of the Japan steamship line in connection with the Great Northern Railway.

Canada.

Toronto, July 24.—General wholesale trade is quiet, with few special features. White cottons are lower. Sugars rule steady, with the movement in groceries restricted. The crop outlook is fairly satisfactory and business prospects good.

Montreal, July 24.—General trade is about stationary. Leading jobbers report sales of the same volume as corresponding period last year, while collections are average. There seems to be a little less activity among cotton and woolen manufacturers, and time is being shortened. Quebec city and district report the trade situation more satisfactory, sales more active, with a corresponding increase in collections. Crops throughout the province indicate a larger yield than for some time, with the exception of hay, which is hardly up to average.

Halifax, July 24.—There is not much life in general trade and the volume of business is light. Crop prospects continue satisfactory. The hay crop promises to be a good average one, and the grain is looking fine. Dry fish are firmer in the St. John market, and the crops throughout New Brunswick look well. Lobsters, which were scarce and small in the first part of the season, have been reported very plentiful of late. Reports from the Newfoundland fisheries are somewhat encouraging.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only for four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.

Wool.

The dull market continues, the present demand being almost nil. Stocks are large, and many leading houses refuse to take on more wools, even by purchase or consignment. No one wants to buy, and dealers have all they desire to hold. Values are quoted about the same, but, in the absence of business, quotations are largely nominal. The London sale closed July 21, with the market steady. American purchases at the sale were about 2,000 bales. Australian wools in this country are held firm, but sales are slow. Importers are not disposed to push them where they are not wanted, as they cannot be replaced at the price. Carpet wools are dull but steady. Liverpool auction sale of East India wools opened July 20, with prices 5 per cent. lower. Sales have proceeded briskly, with the price yet too high to fill American orders.

Dry Goods.

Business is slow, and about the only activity is shown in preparing to show fall goods. The curtailment in the production of cotton goods continues, but, with a dull demand, the surplus goes down very slowly. Conditions continue very unfavorable. Printed fabrics in dark fall styles are being opened, but sales are slow. Ginghams are quiet. Dress woolens are dull with agents and jobbers, and business with the mills is getting worked out. The market for men's-wear woolens is yet lifeless. Some spring orders have been booked on very cheap goods selling at 50@60c., but on the general average clothiers have manifested little interest as yet, and spring orders have not started. It looks like a slow fall business in woolens.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM JULY 11, 1896, TO JULY 17, 1896, INCLUSIVE.

THE CANADIAN TARIFF.

The London *Daily Financial News* says: "The domestic revolution in the political affairs of the Dominion was greeted with equal enthusiasm by the free trader and the commercial exporter on this side of the Atlantic, as the tocsin of a new era, or the death-knell, if the phrase be preferred, of the long-established fiscal system which Sir John Macdonald's supporters had symbolized as the 'N.P.' It was not without reason that, on first appearances, Mr. Laurier's conspicuous victory should have been so interpreted by the people who for eighteen years or more had chafed under the restrictions placed upon freedom of exchange by an iron-clad protectionist administration. On this side there was excuse for the jubilation some of our commercial contemporaries indulged in. On the other side there was warranty, also, for the demonstrations over Mr. Laurier's triumph. But the sources of the rejoicings in the two cases clearly did not come from the same spring. The discussion of the normal 'swing of the pendulum' may be left to the oracles of political opinion. A period of eighteen years' rule by one political party, for many years of which it had lost its picturesque and magnetic head, would go a long way to account for a remarkable revulsion of feeling, even in the traditionally conservative population of the Dominion. Nor do we desire to minimize the significance of the change in principles, as well as in persons, which is represented by Mr. Laurier's sufficiently imposing majority. According to the best information, it is more homogeneous and servicable than the miscellaneous crowd Sir John Macdonald used to have at his beck and call. But the question which is of most concern is whether Laurier, as the living Premier, means that the 'N.P.' is an extinct force; and that is a point on which time and a good deal more evidence are required for the formation of a definitive conclusion.

"Three measures are open to the minister who desired to figure in history as the fiscal reformer of Canada, and even among old free traders, such as Sir Charles Dilke on the one hand and Mr. Goldwin Smith on the other, opinion as to the best course is at strange variance. There is the possibility of following the example of New South Wales, and encouraging external trade by reducing import duties to a minimum; there is the proposal to abandon a protective tariff altogether, and levy only such duties upon imported goods as may be justified by the requirements of the revenue; there is, again, the temptation to set up reciprocity treatment—the doctrine of fair trade, as it is currently called—the doctrine which the Scots of old epitomized in the homely adage 'Scra' me, scra' thee.' Mr. Laurier is not a Blake, he is still less of a Mackenzie; and, possibly, the Latin blood in him prevents him from becoming a cold-blooded, and, therefore, exact economist. He is shrewd enough to discern that while the elaborate system Sir J. A. Macdonald built up encouraged or 'protected' native manufactures, it did so at the cost of all the producers of the country. It created a growth of artificial industries; but the price was to check Canada in the race of progress, even as compared with the newer colonies in the southern seas. All that Mr. Laurier has promised is to devote his majority to the substitution of a revenue tariff for an avowedly protectionist tariff. 'Canadian manufacturers,' he says, 'have much to gain from the substitution of such a tariff for the present system.' That is undoubtedly true; but, from old experience, we are able to say that it is a proposition the Canadian manufacturer will be reluctant to accept. The commander of the legions in the Dominion of to-day, at any rate, expresses his confidence that, 'with the exception of monopolies and combines'—the latter being the Canadian equivalent for the American trust—all the manufacturing interests will welcome a change of policy on the lines laid down in his electioneering manifestos.

"A distinction has necessarily to be drawn between the aspect Mr. Laurier's addresses were intended to present to the Dominion people and the meaning we are obliged to place upon them in interpreting them for the benefit of the financial and mercantile public at home. None of us, for instance, would take exception to the passage of his address which is herewith quoted: 'The moment a tariff has been framed and enacted which would not be subject to variations, under which manufacturers would know that their invested capital would operate regularly according to the conditions calculated on by them, under which their conditions with regard to foreign competition would not be arbitrarily jeopardized, under which the burden of taxation would be reduced to the lowest degree compatible with the exigencies of the revenue, there is reason to hope that such a system would ingratiate itself in the confidence of the people, and that therein the manufacturing class would find the security which it needs and the consuming classes that relief that they must have.' So far it is cogent reasoning, and it nears eloquence in its expression, but if it be addressed to deaf ears of what avail is it, and if the ears *are* deaf, of what power is a majority which may be as quickly unmade as it was made? We have to read Mr. Laurier's declaration in the light of events which are still pending, and from the point of view of sundry other manifestations he made while he was still in 'the cold shade of opposition.'"

THE PAN-RUSSIAN EXHIBITION.

The London *Times* says: "Our correspondent at Nijni Novgorod, writing on June 23, describes the Pan-Russian Exhibition as having been prematurely opened in order to secure visits from the foreigners who had been at the coronation in Moscow. The annual fair does not open ordinarily till July 15, and in the meantime hotel keepers are being disappointed.

"The exhibition is of great interest and variety. It should convince all Englishmen that Russia is now a manufacturing and no longer exclusively an agricultural country. There are samples and specimens of everything. The peculiarities of Russia's various races may here be studied in their productions and domestic objects from the Arctic circle right away to Central Asia, and a living interest is added by the presence of Samoyeds, Turcomans, Tartars, Sarts and Persians in their native dresses. The exhibition covers over 200 acres, a space rather larger than the Paris Exhibition of 1889. Within one building the progress of Central Asia may be traced from the primitive hand looms for weaving silk, worked by natives, to the latest improvements in preparing Khivan cotton. A perfect museum of Asiatic curiosities has been collected here. The fine showcase of the new Russian Trading Company in Central Asia and Persia deserves a close inspection. There, as in other departments, are samples of English goods sold in the East to show Russian merchants the work of their great competitors. This idea is carried out still more thoroughly in the Chinese pavilion erected by the Kiakhta Tea Company. The Siberian section is most instructive as to the varied riches of the region now being opened up by the railway to the Pacific. Two large gilded globes represent the gold extracted from the mines, which belong to the private cabinet of the Emperor. The total amounts to 197½ tons, worth about £28,000,000, extending over 64 years. The agricultural section seems to reflect the poverty of agriculture in general. The mining and metallurgical branch exhibits great advances. One works alone, that of the New Russia Company, at Hughesofka, has increased its annual output of coal and iron ore used in its own mills from 48,387 tons to 550,483 tons and from 11,000 tons to 247,769 tons respectively. The cotton goods of Morozoff and cloth of the Thornton Mill Company show the perfection to which these branches of manufacture have attained. The machinery hall is one of the finest in the exhibition, measuring 147,000 square feet in extent and 108 feet high. As for the celebrated fair, the government asserts in an English guidebook that, although other Russian and Eastern fairs are gradually dying out, the one at Nijni 'continues to increase in importance from year to year.' This is in direct contradiction with the opinions and experience of the largest manufacturers in Russia, many of whom have ceased to use the fair. Possibly the traditional custom of giving twelve months' credit may have something to do with its continued vitality.

"Toward the cost of the exhibition 8,000,000 roubles appear to have been assigned by the government, and large subsidies have been given for new hotels and restaurants. The full cost will probably be as difficult to ascertain as that of the coronation. French cooks from the imperial palaces in St. Petersburg have been requisitioned to cater for the more fastidious public, and electrical railways and electrical lighting have been introduced throughout the fair."

A NATIONAL CODE FOR GERMANY.

Kemp's *Mercantile Gazette*, London, says: "The German nation are to be congratulated upon the passing of their Civil Code, which, after thirty years' preparation, has at length been finally adopted as the law of the empire, although it will not come into force until the beginning of the year 1900. For such a nation as Germany, nothing more essential to its well-ordered progress can be imagined than a code of civil law. This cluster of countries, which is now known as the German Empire, is under one government and one head, with one army and one navy. But, as long as its people lived and worked and died under such a number of different and conflicting legal systems, the very basis of true national unity, as distinguished from imperial power, was wanting. In regard to its laws, Germany is still in many places quite mediæval, and although parts of Prussia have a provincial system, there are yet numerous local codes and customs still extant, while the Rhine provinces continue to be under the French code. The work has been enormous, and it has been practically done three times over, the third commission having been composed of German judges and lawyers skilled in the actual administration of the law. Much of it is, of course, really based upon that great body of jurisprudence called the Roman Law, a work so massive and enduring in its character that it still forms the greatest monument of this wonderful race, which built and legislated as it were for all time, and left succeeding generations to use its materials of every kind in erecting a new order of civilization upon the ruins of the old.

"If a code for the German empire has been found possible, it is obvious that a code for Great Britain would be far more easily accomplished. We have, at least, no need to sweep away a long series of ancient local customs, nor are we hampered by the wisdom of the middle ages as were the German lawyers. With us it would not be the drawing up of an ideal code that would really be a difficulty, but rather its passing into law when constructed. Even in Germany this took some time and trouble, but with our very free Parliament it looks like an impossibility. The criminal code was the result of years of labor and of strenuous thought by some of our greatest lawyers and thinkers, and yet it still stands a monument of wasted energy, apparently with no chance of getting any further. Indeed, the working of our parliamentary system becomes more and more complex and difficult as it grows older. It seems strange and unsatisfactory that we, who have given codes to India in as thorough and complete a manner as ever did ancient Rome to her colonies, cannot contrive to pass a criminal or any other code of our own. It is true, of course, that by means of the Criminal Law Consolidation acts a good deal of this branch of our law has been reduced to a statutory form. But there are many points that still remain in a fluid state, and as to which legislation is desirable. The sad thing about the proposed criminal code is that most of it has been agreed to several times, and it was only wrecked for want of time to debate the clauses that were in question. Such failures as these do not speak well for our methods of government, and seem to show that, as a business and common-sense people, we are wanting somewhere.

"The completion of the great German Civil Code ought to revive the subject of codification among ourselves. If the criminal law contains too many thorny points, there is commercial law, which presents no burning questions for solution, and could be codified with ease and certainty. We have of late years done something in this direction by means of the acts dealing with bills of exchange and partnership, to say nothing of the sale of goods, which was a promising commencement. There remain many other large areas of mercantile law at present untouched which could well be treated in the same fashion. If the whole of our commercial law were reduced to a code, we should, in this way, have made a start towards the completion of a real civil code, which would be most encouraging. But until some better method of dealing with the business of the House of Commons has been devised and put into practice, it seems hopeless to attempt to pass any such great measures through Parliament. If the theory of devolution to grand committees ever becomes an accomplished fact, the prospect would be much clearer. It is curious to note that in the German code a clause was inserted, after much disputing, to the effect that incurable mental disease should be a valid ground for divorce. We are still waiting for some such reform of our law in England, where it would apply to more cases than most people would suppose. Indeed, the whole of our law of divorce, to say nothing of our laws of marriage, needs codifying and improving in various ways. But these would be much contested propositions, and so it is better to keep to that part of a civil code which would deal with commercial law, and so is, after all, of most pressing interest and importance to men of business."

HALF YEAR PIG IRON STATISTICS.

The American Iron and Steel Association has received from the manufacturers complete statistics of the production of all kinds of pig iron in the United States in the first half of 1896, also complete statistics of the stocks of pig iron which were on hand and for sale at the close of the half year. Detailed statistics of both production and stocks will be found on the following page:

"The total production of pig iron in the United States in the first half of 1896 was 4 976,236 gross tons, against 4,087,558 tons in the first half of 1895 and 5,358,750 tons in the second half of 1895. As compared with the first half of 1895 there was an increase in the first half of 1896 of 888,678 tons, and as compared with the second half of 1895 there was a decrease of 382,514 tons.

"The production of pig iron of Bessemer quality in the first half of 1896 was 2,793,672 gross tons, against 2,402,023 tons in the first half of 1895 and 3,221,672 tons in the second half. The decreased production of 428,000 tons in the first half of 1896 as compared with the second half of 1895 is doubtless due in large part to the increasing demand for open-hearth steel, and particularly for basic steel made in the open hearth.

"For the first time in our statistical inquiries we have ascertained the production of basic pig iron. In the first half of 1896 it amounted to 199.595 gross tons, distributed as follows:

	Tons.
New York and New Jersey	6,171
Pennsylvania—Allegheny county	88,573
Pennsylvania—other counties	38,875
Virginia and Alabama	47,546
Ohio and Wisconsin	18,430
Total	199,595

"The production of spiegeleisen and ferro-manganese in the first half of 1896 was 83,010 gross tons, against 73,011 tons in the first half of 1895 and 98,713 tons in the second half.

"The following states increased their production of pig iron in the first half of 1896 as compared with the second half of 1895: Connecticut, New York, New Jersey, Maryland, Virginia, North Carolina, Illinois, Michigan and Wisconsin. The following states show a decrease: Massachusetts, Pennsylvania, Georgia, Texas, West Virginia, Ohio, Missouri and Colorado. Each of the three southern states, Kentucky, Tennessee and Alabama, by a remarkable coincidence, made almost exactly the same number of tons of pig iron in the first half of 1896 as in the second half of 1895. The shrinkage in Pennsylvania was 367,029 tons, which is almost equal to the total shrinkage of 382,514 tons in the whole country. Here again the influence of the open hearth is observable, as the decreased production of Bessemer pig iron in Pennsylvania in the first half of 1896 as compared with the second half of 1895 was 348,092 tons, which figures fall very little below the total shrinkage in Pennsylvania above mentioned.

"The whole number of furnaces in blast on June 30, 1896, was 196, against 242 in blast on December 31, 1895. The number of furnaces out of blast on June 30, 1896, was 273.

"Our statistics of unsold stocks of pig iron on June 30, 1896, show a marked increase over the unsold stocks on December 31, 1895. On June 30 the stocks which were unsold in the hands of manufacturers or their agents, and which were not intended for their own consumption, amounted to 644,887 gross tons, against 444,332 tons on December 31, an increase of 200,555 tons, or over 45 per cent. These figures do not include pig iron sold and not removed from the furnace bank, nor pig iron manufactured by rolling-mill proprietors for their own use.

"Included in the stocks of unsold pig iron on June 30 were 51,040 tons in the yards of the American Pig Iron Storage Warrant Company which were yet under the control of the makers, the part in these yards not under their control amounting to 60,960 tons, which, added to the 644,887 tons above mentioned, makes a total of 705,847 gross tons of unsold pig iron which were on the market at that date, against a similar total of 506,132 tons on December 31, 1895. The total stocks in the above named warrant yards on June 30, 1896, amounted to 112,000 tons, nearly all of which were held in the south."

STEEL PRODUCTION IN THE UNITED STATES AND GREAT BRITAIN.

The *Engineering and Mining Journal* says: "The following table presents an interesting comparison between the two leading steel-making nations, showing the total production of Bessemer and open-hearth steel in each for ten years ending with 1895, in long tons. The production of crucible and other special steels is not included; it is very small as compared with the totals:

UNITED STATES.

	Bessemer		Open hearth		Total
Year.	Tons.	Per ct.	Tons.	Per ct.	tons.
1886	2,269,190	91.2	218,973	8.8	2,488,163
1887	2,936,033	90.1	302,069	9.9	3,258,102
1888	2,511,161	88.9	314,318	11.1	2,825,479
1889	2,930,204	88.7	374,543	11.3	3,304,747
1890	3,688,871	87.8	513,232	12.2	4,202,103
1891	3,247,417	84.9	579,753	15.1	3,827,170
1892	4,168,435	86.2	669.389	13.8	4,638,324
1893	3,215,686	81.3	737,890	18.7	3,953,576
1894	3,571,313	82.0	784,936	18.0	4,356,249
1895	4,909,128	81.2	1,137,182	18.8	6,046,310

GREAT BRITAIN.

	Bessemer		Open hearth		Total
Year.	Tons.	Per ct.	Tons.	Per ct.	tons.
1886	1,570,520	69,3	694,150	30.7	2,264,670
1887	2,089,403	68.0	981,104	32.0	3,070,507
1888	2,032,794	61.1	1,292,742	38.9	3,325,536
1889	2,140,791	59.9	1,429,109	40.1	3,569,960
1890	2,014,843	56.3	1,564,200	43.7	3,579,043
1891	1,642,005	52.0	1,514,538	48.0	3,156,543
1892	1,500,810	51.4	1,418,830	48.6	2,919,640
1893	1,493,354	50.6	1,456,309	49.4	2,949,663
1894	1,535,384	49.4	1,575,318	50.6	3,110,702
1895	1,535,225	47.1	1,724,737	52.9	3,259,962

"This table shows that, while the fluctuations in our own production have been much greater and more abrupt than in the British output, the tendency has been generally to an increase. The quantity of steel made in the United States in 1895 shows an increase over that for 1886 of 3,558,147 tons, or 143 per cent., while the gain in Great Britain during the ten years was 995,292 tons, or 44.4 per cent. In 1886 the total steel production of the United States was to that of Great Britain as 100:91, while in 1895 the proportion was as 100:54.

"The growth of the open-hearth process has been much greater proportionally in Great Britain than here. While our proportion of open-hearth ingots to the total increased in ten years only from 8.8 to 18.8 per cent., the British figures show an advance from 30.7 to 52.9 per cent., more than half the steel being now made by the open-hearth process.

"The basic process has made much more progress in Great Britain than in this country. In 1895 the returns show that of the Bessemer steel ingots 1,093,675 long tons, or 71.2 per cent., were made by the acid process, while 441.548 tons, or 28.8 per cent., were made by the basic process. In 1894 the proportions were 74.2 per cent. acid and 25.8 per cent. basic ingots. In the making of open-hearth steel the basic process has made less advance; in 1895 there were 1,564,868 tons, or 90.7 per cent. of the total of open-hearth ingots, made by the acid process, while only 159,869 tons, or 9.3 per cent., were basic ingots.

"Our own statistics do not distinguish between steel made by the two processes. There is no basic Bessemer steel made here, however, and until very recent years the basic open-hearth process made very little headway, its use being confined to a single plant. As its advantages become more apparent the process is growing in favor, and we find that out of the new open-hearth plants built or begun in 1895, which included 62 furnaces with a total capacity of 690,450 tons yearly, 34 furnaces were intended to make basic steel. The transformation is thus evidently going on with increasing rapidity, and its progress will be hastened by present trade conditions, the tendency of which is to induce the mills turning out finished steel in its various forms to make their own ingots instead of depending upon billets bought from the steel makers. The present prospect is that the present and the coming year will see a considerable increase in the number of open-hearth, and especially basic open-hearth plants.

"The slow progress made by the basic process has been due partly to some doubt which has existed as to the quality and reliability of the product, which has been gradually removed as it was tested and came into use, but in greater degree to the fact that we possessed in the Lake Superior region an apparently inexhaustible supply of ores adapted to the Bessemer process. More recently some of the southern furnaces have shown that they can furnish basic pig in abundance and at a low price, and this fact will have a great effect in the future, especially in furthering the manufacture of steel in the south."

PETROLEUM PRODUCTION IN 1895.

The *American Manufacturer* says: "The most notable features in connection with the production of crude petroleum in 1895 are: 1. The notable increase in production, especially in Ohio, Indiana and California. 2. The decrease in stocks. 3. The rise in prices. 4. The extension southward of the profitable producing districts in the Appalachian range. Briefly summarized, the facts regarding these four features are as follows: The production in the United States increased from 49,344,516 barrels in 1894 to 52,983,526 barrels in 1895, most of the important producing districts sharing in this increase. The production of Pennsylvania increased from 18,077,559 barrels to 18,231,442 barrels; of Ohio from 16,792,154 barrels to 19,545,233 barrels. This increase in Ohio was fairly distributed throughout the two important producing districts. The production of Indiana increased from 3,688,666 barrels to 4,386,132 barrels, while the production of California, owing to the new discoveries at Los Angeles, increased from 705,969 barrels to 1,208,482 barrels. On the other hand, there was a slight decrease in the production of West Virginia and New York.

"The stocks of crude petroleum in the Appalachian oil field at the close of 1895 were 5,344,784 barrels, as compared with 6,499,880 barrels at the close of 1894. The largest stocks at the close of any one month in 1895 were 5,859,,348 barrels in January, as compared with 11,755,219 barrels in January, 1894. The average value of certificate oil in the Pennsylvania field in 1895 was $1.35⅞, as compared with 83⅞c. in 1894. This was the highest average price since 1877. In the Lima field the

average price advanced from 48c. a barrel in 1894 to 71¾c. in 1895. The total value of the 49,344,516 barrels produced in the United States in 1894 was $35,522,095, or nearly 72c. a barrel, while the total value of the 52,691,279 barrels produced in 1895 was $57,691,279, or about $1.09 per barrel.

"The petroleum-producing localities in the United States remain about as they were in 1894, the only important addition to the producing territory being the Los Angeles district in southern California, but this is hardly to be regarded as new territory, as it is surrounded by the older producing districts of that section of the state. Most of the oil produced in the United States in 1895 is still from the Appalachian district, all of that produced in New York, Pennsylvania and West Virginia, together with that produced in Macksburg, the Eastern and Southern Ohio and Mecca-Belden districts of Ohio, being from this great field. In this district there were produced in 1895 30,959,139 barrels out of a total of 52,983,526 barrels, or nearly 58½ per cent.

"In the following table is given a statement of the total amount and the total value of all crude petroleum produced in the United States in 1894 and 1895 by states and important districts:

ENGLISH COMMENT ON THE SITUATION HERE.

(From the London *Economist*.)

The effect upon trade and business in the United States should the Democratic party win the presidential election and carry out their schemes would, of course, be that of a moral and economic cyclone.

It is one thing to carry an unsound platform in a party convention, quite another to win a presidential election.

But for the uncertainty in regard to legislation American trade would now be feeling a revival of prosperity, and American securities would be increasing in value.

No one cares to lend while there is a prospect of a change in the law which will give the debtor the right to repudiate half his debt. Business will not, and cannot, prosper in the face of such contingencies.

Fortunately, however, the people of the States, as they have repeatedly shown in times past, have a way of surmounting and triumphing over difficulties which must have destroyed a less vigorous nation. Let us trust that it will be so in the present case.

Nothing will please the people of England better than to see America sound and prosperous, economically and politically.

(From the London *Times*.)

They are aware that they are offering £3 for a debt of £5, and they glory in the fact. They boldly advocate legislation to defeat any contract by which an honest man might bind himself to repay the full amount, and also desire to cancel the agreements to pay in gold on the faith of which the United States have obtained loans which would otherwise have been refused.

We have to take note of the fact that one of the historic American parties is fairly captured by men who glory in dishonest aims and avow their desire to repudiate national and private debts.

With the fundamental principles of sound finance and fair dealing thus powerfully assailed, it is difficult to look forward with confidence to any speedy revival of American credit in the Old World.

NORTHWESTERN FLAX ACREAGE.

A writer in the Minneapolis *Market Record* says: "On some lines in southern and central Minnesota and in South Dakota there appears to be about as large an acreage of flax this year as last, in a few larger than last, and along other lines a smaller acreage.

"I have not yet made a careful investigation that is sufficiently satisfactory to base reliable figures upon, but in a general way I think that Minnesota has about 350,000 acres into flax, North Dakota probably 275,000 acres, while South Dakota may have something like 175,000 acres.

"I find that there has been a disposition on the part of the farmers of South Dakota, and in many portions of southern and central Minnesota, to go out of flax production to some extent, but owing to the weather this season there was more or less of wet ground where they were late in seeding and put in a larger acreage of flax than was intended earlier. The same is true to a large extent in North Dakota and in northern Minnesota, where the acreage is largely increased.

"The estimates generally now put the figures at about the same as last year, but I believe there is an excess over last year, owing to the large increase in the north.

"They were sowing flax even as late as last week in North Dakota and in northern Minnesota. The crop appears to be growing well, but owing to the lateness, in my judgment, it is very doubtful whether the later sowings will escape the frosts in the north."

for Preferred and Common Stock
OF THE
NORTHERN PACIFIC RAILROAD CO.,

Deposited under the Plan and Agreement of March 16, 1896.

NEW YORK, PHILADELPHIA AND BERLIN,
July 23, 1896.

The sale of the Northern Pacific Railroad Company under decree of foreclosure of the Circuit Court of the United States having been ordered to take place on July 25th, 1896, notice is hereby given that, pursuant to the provisions of said Plan and Agreement, the third instalment, viz.:

$4.00 per share in respect of Preferred Stock, and
$5.00 per share in respect of Common Stock,

being the balance of the cash payments specified in the Plan, is hereby called for, and is payable at either of our offices on August 14th, 1896, and all holders of such certificates or receipts are notified to make such payment on or before that date. Their reorganization certificates or receipts must be presented so that such payment may be endorsed thereon.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

INSURANCE.

1850.——1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, AUGUST 1, 1896.

The political campaign is not usually regarded as having fairly begun until the letters of acceptance of the candidates have been made public, and neither of the two leading parties have yet formally accepted the nominations. The preliminary stirrings, however, are being felt, and there is already a demand among the sound-money men for the letter of acceptance of Mr. McKinley. The chairman of the Republican National Committee has been in New York during the week making arrangements for opening the campaign in the east. The Republican party is apparently united in all except the silver states, whose representatives seceded from the St. Louis convention, though there may be individual members of the party in the agricultural districts who will vote for free coinage. In the ranks of the Democracy there is much confusion. The leaders of the regular organization in New York state have not indicated what their attitude will be, and it will not be definitely known until the state convention shall have met in September. Meanwhile, individual members of the party are taking sides in accordance with their particular views. A few local and county organizations in the state have indorsed the Chicago ticket, and, without doubt, the tendency on the part of what are known as "machine" men will be to indorse the ticket so as to maintain the attitude of regularity. The movement in favor of a third ticket seems to be gaining in strength, and it may now be taken for granted that, unless the current of opinion changes strongly, such a ticket will be placed in the field. The personnel of the revolters against the Chicago ticket is of high character; it is scarcely too much to say that the adoption of the 16-to-1 plank has arrayed the flower of the Democratic party against the Chicago ticket.

Perhaps the most forceful personality in the Republican party, and certainly one of the most forceful in contemporary public life, is Speaker Reed. He is a man noted for strength of statement in his public addresses, which lose nothing of their force because of the discrimination which is usually characteristic of them. An address just delivered by him at Alfred, Me., illustrates his general habit of statement, and will doubtless form one of the campaign documents in the struggle now on. The speech dealt mainly with the one real issue in the campaign, that as to the monetary standard. In the portion dealing with the attitude of party opponents, Mr. Reed, who, in spite of many hard knocks given and taken in political combat, is perhaps the Republican statesman best liked by the Democrats, made a strong appeal to the latter to sink party differences for the time and fall into line for the support of the existing monetary standard. His historical allusions were happy, and there can be no doubt that the address will turn out to have been a vote-winning one.

In touching on the question of free coinage Mr. Reed said that heretofore whenever gold and silver have stood together it has been at the market value. When trying to make gold and silver circulate together we have always married them according to their market value. To-day we find them, not 16 to 1, but 31 to 1, and we are going, they say, to lift silver to twice its value, not by the universal sense of mankind, which alone makes values, but by the statute of the United States, single-handed against the civilized world. Mr. Reed said that if the demonetization of silver is a disease at all, it is a world disease, and he defied anybody to find a single argument which proves that the remonetization of silver would be good for the whole world. If it is a world disease, he said, how can it be reached except by a world remedy. International bimetallism he could understand, but the driving out of gold and substitution of silver would be only silver monometallism for the United States. It was not bimetallism for the world and a staple currency, but the shifting from gold currency and civilized Europe and going over to silver and Mexico, Japan, India and China.

Mr. McKinley is growing more pronounced in his expressions upon the money question as the campaign progresses, and before long he may be as vigorous in his expressions as his associate on the Republican ticket, Mr. Hobart. In a speech at Canton this week Mr. McKinley declared that a depreciated currency would work disaster to the interests of the people, and to none more than those of the workingmen and producers. What we call money, with which values are measured and settlements made, must, he said, be as true as the bushel which measures the grain of the farmer and as honest as the hours of labor which the man who toils is required to give. The one must be as full and complete and as honest as the other. Our currency to-day is good—all of it as good as gold. It is the duty of the people of the country, he said, to stand unitedly against every effort to degrade our currency or debase our credit. They must unite now, as they have always united in the past, in every great crisis of our country's history. He recalled the fact that when the country seemed wildly bent on inflation preceding the resumption of specie payment, the sober sense of the American people, without regard to party, united and stemmed that threatened tide of irredeemable paper money and repudiation, and placed and kept the nation on the rock of public honor, sound finance and honest currency, and he suggested that similar action should be taken now.

Secretary Carlisle has recently written a letter to a citizen of Arkansas in which he discusses the question of the payment of life insurance policies under a system of free coinage. He says that in case free coinage of silver should be established in this country, he presumes that insurance companies and all other institutions would continue to make their payments by checks and drafts on banks, as heretofore; in his opinion, the whole volume of our currency would sink at once to the silver basis, and these checks and drafts would be paid in silver dollars or their equivalent instead of gold or its equivalent, as is now the case. He says that probably no one supposes for a moment that it would be the duty of the government to attempt to keep the standard silver dollar coined free for private individuals and corporations equal in value to a gold dollar—or, in other words, that it would be the duty of the government to attempt under a system of free coinage to maintain the parity of the two metals. The dollars would be coined on private account and delivered to private individuals and corporations as their own property, the government having no interest whatever in them, and being, therefore, under no obligation to sustain them by guaranteeing their value. Under our existing system, the Secretary says, all silver dollars are coined on account of the government, and are issued by the government in payment of its expenditures and other obligations, and it would be an act of bad faith, therefore, to permit them to depreciate.

What will undoubtedly prove one of the most useful sources of information in the campaign of education on the money question upon which the country is now entering is a pamphlet which has been prepared by the Treasury Department. The pamphlet has been prepared with the intention of furnishing answers to questions, some of which are being asked and others of which are expected to be asked during the course of the campaign. It gives a history of United States bonds from the earliest issues, how they were disposed of, and of coinage of all sorts and Treasury issues of paper money of every description in circulation. The various kinds of notes—ten in number—are described, and amounts issued and in circulation. Fractional currency also has a paragraph, and the system of redemption of United States notes is explained. Statistics are very elaborately gone into, covering the world's production of gold and silver, American production from 1792 to 1895; monetary systems and approximate stocks of money in the principal countries of the world, and a summary of monetary events since 1796, arranged chronologically; the value, weight and fineness of all American coins, and the changes and dates of each issue. It is announced to be the purpose of the department to send a copy of the pamphlet to every person applying for information.

President Cleveland has just issued a proclamation warning citizens of the United States against violations of the neutrality laws. He points out that since his proclamation of last year the neutrality laws of the United States have been the subject of authoritative exposition by the judicial tribunal of last resort, and it has been declared that any combination of persons organized in the United States for the purpose of proceeding to and making war upon a foreign country with which the United States are at peace, and provided with arms to be used for such purpose, constitutes a "military expedition or enterprise" within the meaning of the neutrality laws, and that the providing or preparing of the means for such "military expedition or enterprise," which is expressly prohibited by said laws, includes furnishing or aiding in transportation for such "military expedition or enterprise.." The proclamation warns all citizens of the United States, and all others within their jurisdiction, against violations of the neutrality laws, interpreted as explained, gives notice that all such violations will be vigorously prosecuted, invokes the cöoperation of all good citizens in the enforcement of the laws and in the detection and apprehension of any offenders against the same, and enjoins upon all the executive officers of the United States the utmost diligence in preventing, prosecuting and punishing any infractions thereof.

A CONDENSATION OF THE CASE FOR SILVER.

One of the phenomena in the discussion of our present and prospective financial situation, particularly at the east, is the difficulty gold-standard business men have experienced in discovering the leading arguments favoring free coinage of silver at the ratio of 16 to 1. An examination of recent free-silver speeches fails to furnish the explanation of the attitude of those who oppose the gold standard, and when one is forced back to extended free-silver oratorical efforts, their extreme length is discouraging.

In order to bring leading free-silver claims and arguments, in brief compass, into direct antagonism with the facts, BRADSTREET'S has prepared the following condensations of the more important points made by advocates of the free coinage of silver at 16 to 1, with replies thereto:

THE "CRIME AGAINST SILVER."

The closing of the mints of the United States in 1873 against the free coinage of silver was a conspiracy to increase the purchasing power of gold.

This claim appears to be based on the allegation, frequently made, that "British gold" was used to secure the demonetization of silver in the United States in 1873, the supposition being taken for granted that such demonetization would increase, or has increased, the purchasing power of gold. As to the use of British gold: The statement was published that Ernest Seyd (deceased), the famous bimetallist, "was sent to this country with this fund (£100,000), as agent for foreign bondholders, to effect the same object," i. e., the demonetization of silver, which had been accomplished in Germany, England and Holland in 1872. This was apparently based on the affidavit of F. A. Luckenback, in 1892, that "while at dinner in Mr. Seyd's house (London, 1874), * * * Mr. Seyd told him: 'I went to America in the winter of 1872–73, authorized to secure, if I could, a bill demonetizing silver. It was to the interest of those I represented—the governors of the Bank of England—to have it done. I took with me £100,000, with instructions that if it was not sufficient to accomplish the object to draw for another £100,000, or as much as was necessary. * * * I saw the committee of the House and Senate and paid the money, and stayed in America until I knew the measure was safe.'"

Mr. Luckenback also related that after dinner Mr. Seyd took him apart and made him pledge his honor not to relate what he was about to say (as above).

The statement (by Mr. Luckenback) was denied unqualifiedly by the son and brother of Mr. Seyd (then dead) a few weeks after Mr. Luckenback had made the affidavit. A subsequent investigation by a London newspaper correspondent showed that Mr. Seyd was not out of England from October, 1872, to March, 1873, long enough "to have paid a visit to the States." Further, the editor of the *Bankers' Magazine* (quoted to show that Mr. Seyd came here in 1873 to secure the demonetization of silver) denied that any such statement ever appeared in its columns. An examination of the *Congressional Globe*, April 9, 1872, which is frequently declared to state that "Mr. Ernest Seyd, of London," etc., "who is now here," * * * "made various sensible suggestions," etc., shows that the words "who is now here" do not appear there. The only claim noted that the demonetization of silver in 1873 was the result of a "conspiracy" appears to rest, therefore, on the exploded story that Mr. Ernest Seyd, the *bimetallist*, bribed Congress to that end.

WHAT BROKE THE PRICE OF SILVER.

The fall from more than $1.00 to 53 cents in the value of the silver in the silver dollar is due to the stoppage of free coinage of silver in 1873.

The attempt to demonstrate the truth of this very erroneous statement appears to be based on the fact that the fall in the price of silver dates from 1873, when silver was demonetized. Silverites have usually contented themselves with loudly asserting the truth of the above. To prove it would tax any one, not alone because it isn't so, but because it would be necessary to show that the fall in the price of silver since 1873 could not be rationally explained upon any other hypothesis or by any other phenomenon than the demonetization of silver in 1873. In BRADSTREET'S of July 18 it was made plain to the veriest beginner among students that the world's output of silver, particularly since 1870, has increased so heavily in excess of the world's demands that a severe shrinkage in price was the only natural result. The world's output, minus industrial consumption, i. e., available for the world's coinage, increased fivefold from 1870 to 1893, and the price went off about 50 per cent. Furthermore, the free coinage of silver was not "stopped" in 1873; practically no silver dollars had been coined for years; silver was then too valuable. But admitting, for sake of argument, that coinage of silver was "stopped" in 1873, it was begun again under the Bland-Allison (or remonetization) act of 1878, and continued under that and the Sherman act of 1890 until 1893, during which period (fifteen years) 419,000,000 silver dollars were coined, more than fifty times as many as were coined in eighty years prior to 1873. And this is what is called the "stoppage of the coinage of silver."

THE "SCARCITY OF MONEY" STORY.

As a result of the closing of the mints to free coinage of silver in 1873, there is a scarcity of money, which is the cause of the fall in prices generally and the distress in agricultural lines.

As to scarcity of money: The total money in circulation per capita in 1873 was $18.04, and in 1895 it was $22.96, an increase of money in the hands of the people in twenty-two years of nearly $5 per capita. The total amount of money in the United States in 1873 was $774,445,000; in 1895 it was $2,217,064,000, nearly three times as much, while the increase in population was only about 60 per cent. As previously pointed out, over $419,000,000 in silver alone was coined between 1878 and 1893.

If the first of the two statements included in the last quotation falls to the ground, the second, which depends on the first, requires no reply, but it is worth while explaining that it was not the fall of 50 per cent. in the price of silver (caused by a fivefold increase of silver output) which caused wheat prices and iron prices to shrink so much during fifteen years. Wheat production throughout the world has increased, perhaps, 60 per cent. since 1873, and the price has gone off correspondingly, due not alone to the gain in output, but to excessive competition from Russia, Argentine and India, where cheap standards of living and cheap land have compelled American railroads to transport, and American farmers to produce and sell, at figures which twenty years ago were regarded as impossible.

In wheat and iron one finds the great trade barometers. Iron production in the United States has nearly quadrupled since 1873, and the price is easily one-quarter what it was twenty-three years ago. The production of steel in this country is over thirty times what it was in 1873, and the price, gauged by that for rails, is one-fifth what it was. Improved processes and methods of production, new inventions, enormously cheaper rates of transportation, and the element of competition, are, with other influences, behind the heavy decline in prices, not only in agricultural but in industrial lines.

IF WE HOLD UP SILVER ALONE.

The reopening of the mints of the country to silver at a ratio of 16 to 1 would alone suffice to lift all the silver in the world to its former price, i. e., $1.00 (or more) for the 371.25 grains used in the silver dollar.

The claim is that if the United States offered $1.00 (in gold?) for unlimited amounts of 371.25 grains of silver (now worth 53c. in the world's markets), then 371.25 grains of silver would indeed become worth $1.00, and nowhere would it sell for less. How long could this fairy-like concept be maintained in practice? What kind of dollars could we offer in payment for silver after gold had gone to a premium and disappeared? Silver dollars in payment for silver bullion, or 53c. for 371.25 grains, would result in silver monometallism, and inability to pay our silver dollars out at their face value except within the United States. We would enjoy, as does Mexico and other silver standard countries to-day, paying twelve hundred silver dollars for a six-hundred-dollar debt abroad. Silver mine owners (here and abroad) would sell millions and millions of dollars' worth of silver to the United States at 100 per cent. increased valuation. The world says 23.22 grains of gold is $1.00, not 371.25 grains of silver. We can set this verdict aside and raise the price of silver if we choose—temporarily only—by main strength, or to the end of our purse. After that, the deluge.

MAKING MONEY PLENTIFUL.

Free silver coinage, at the ratio to gold of 16 to 1, would make money more plentiful and easier to get.

"Money more plentiful," yes; "easier to get," no. Money would become more "plentiful" in the mints and in the national Treasury, but it remains for a silver Solon to explain how one is to get money honestly, except as payment for merchandise or services, as a gift, or as a loan with or without collateral.

One of the very first effects of the prospect of free silver coinage at the ratio of 16 to 1 will be to make money much more difficult to get.

FREE COINAGE, WAGES AND PRICES.

The free coinage of silver, 16 to 1, would stimulate business, and therefore prices and wages.

The certainty that our financial system is to be as radically changed as the advocates of free coinage of silver, 16 to 1 desire to have it, would, first of all, show itself in restricted investments. We see signs of this already, even though free silver coinage is nowhere in sight. With free silver in view, what is now a tendency among timid and other investors at home and abroad would become a mighty impulse. One result would be checked industrial production and, naturally, a halt in commercial circles. Restricted credits would follow. About 95 per cent. of the wholesale business of the country is done on credit. The outcome of a sudden struggle to get from a credit to a cash basis may be left to the reader to characterize. If he cannot paint the picture, he probably would not mind the storm itself. Afterwards there would be a revival, naturally. A man cannot be knocked down the second time until he rises once. As for prices and wages, and their stimulation, it would seem as if the "friends of silver" would be wiser to avoid the topic. In any event, this is sure to antagonize every laboring man who is not engaged in producing food. Wages advanced from 1873 to 1892 (Senate Committee Report, March 3, 1893) from a level 147 (gold), calling average rate in 1860 one hundred, to 166 in 1892. Prices at the same time fell from 114 (gold), calling the average in 1860 one hundred, to 92 in 1892. Does the agriculturist ask the industrial and commercial employee to vote for higher-priced food and a change in the fiscal system of the nation under which the wage-earner's income has increased? If free silver is to bring a change, is it to include *lower* wages? As for prices, they have been shown to have fallen off for other reasons than the coinage or non-coinage of silver dollars.

THE BANKING SYNDICATE AND THE GOLD RESERVES.

The arrangements set on foot a fortnight ago for the protection of the Treasury gold reserve and the relief of the financial and business community from the prevalent sense of insecurity have been carried out with remarkable rapidity and success. In fact, it would seem that the financiers who undertook this patriotic duty have, to a certain extent, increased the scope of their plans and given them a wider range than was at first contemplated. Reference was made in last week's issue to the deposit of gold at the Treasury by the banks in exchange for legal tenders, and the fact was noted that the gold reserve had been restored by this means to above the $100,000,000 mark. The present week has seen further deposits of specie, particularly by banks in Boston, Philadelphia and Chicago, which, in this matter, have joined hands with metropolitan institutions. By these means the specie reserve has now been increased to $110,000,000, and, among the other beneficial effects thereof, it may be noted that the tendency to withdraw gold from the Treasury for hoarding purposes has almost entirely ceased. Some scattering amounts have, it is true, been taken out, but, so far as can be learned, these instances are due to individuals, and do not in any way represent a disposition of this kind on the part of bankers or the larger class of capitalists.

Attention, in financial quarters, has centered during the present week to a much greater extent upon the policy of the large foreign banking houses than upon the Treasury and the national banks. It was announced at the beginning of the week that no gold was likely to be shipped to Europe, and on Wednesday a meeting, attended by virtually all the drawers of exchange of any note, was held at the office of Morgan & Co., to receive the report of the committee to which the formulation of a plan of operations by the foreign

bankers had been intrusted. No formal statement about the meeting was made, but it is known that the plan of action submitted by the committee was adopted without dissent. The best authorities in regard to the matter would indicate that the foreign exchange houses have formed a syndicate to draw, if necessary, $75,000,000 in bills of foreign exchange, the period for which the agreement is to run being fixed till after the November election. The affairs of the syndicate are to be managed through five of the largest houses, and the various participants will divide the profits resulting from the syndicate's operations in proportion to the amount of business done, interest at the rate of 4 per cent. being allowed upon the amounts they respectively advance.

By this arrangement the foreign banking houses put themselves squarely in line with the national banks, and place their foreign connections and credit at the service of the financial and mercantile communities at a crisis. It is not formally stated, but is, of course, understood that none of the houses interested in this transaction will ship gold during the continuance of the arrangement. A further and very interesting development is reported at the close of the week, indicating that some exceedingly large importing and manufacturing interests that are usually among the principal purchasers of exchange have informally given their adherence to the syndicate, and, in order to diminish pressure upon the foreign exchange market, have agreed to carry their transactions abroad upon credits, as far as possible. All the developments of the week, however, are encouraging from the evidence they give that forces of this magnitude in our business and financial community have taken such energetic and, it is to be believed, entirely successful steps to diminish causes of distrust and furnish a basis for a reassertion of confidence in the situation.

NO DEMAND FOR MUNICIPAL BONDS.

Rather more was made this week of the failure of the cities of New York and Brooklyn to secure bids for issues of their bonds than the subject probably deserves. In the sensitive condition of the securities market generally the incident was, however, made use of as a bear factor, though closer examination would tend to modify any extremely unfavorable conclusions under this head. In fact, considering the situation of the investment market, the time of year, and the manner in which the bonds were offered, it would have been really surprising if the issues had been fully taken. The facts in the case may be summed up by saying that the credit of New York, and that of Brooklyn, too, are as high as ever, but that under existing circumstances the savings banks, investing corporations and private capitalists, who are the chief buyers of such high-grade securities, are indisposed to do anything, and prefer to keep control of their disposable cash rather than to part with it, even for the obligations of municipalities that have an unvarying record for meeting their obligations in gold, as New York city did during the civil war.

The actual facts in the case are that on Monday last $400,000 3½ per cent. gold bonds and stock of New York were offered by its comptroller, but the bids for the same, when opened, proved to aggregate only $121,000, at from 100 to 101.14. On Tuesday, July 28, the same official opened bids for $3,505,000 of city bonds and stock of a similar form and rate. The applications, which amounted to only $1,010,500, ranged as to price from par to 107, there being twenty-two bidders in all. On the same day the comptroller and mayor of Brooklyn found but two bids for $1,535,000 of that city's 3½ per cent. bonds, and adjourned the sale until September 15. In regard to the New York city bonds, some question was raised as to whether the fact that part of the amount offered was not exempt from local taxation may have had an influence in checking bids. As the same cause has not operated in connection with a number of recent bond issues made by the city, it is difficult to assert that it had an influence in the present case, and the suggestion, therefore, looks like an afterthought.

Wall street, as already stated, took the view that the incident was a bear argument in connection with the stock market, and it was used in that way during the renewed depression of stock prices that occurred on Tuesday and Wednesday. In banking circles and among bond dealers the tenor of opinion was much more moderate, though it was impossible to obtain from reliable sources any confirmation of the theory that the summer season, and the consequent absence of representative people who would be among the probable purchasers, had any share in producing the unfortunate result. Municipal bond dealers put the outcome upon the broad ground that investors, both corporations and individuals, are disinclined to buy anything at this time, the uncertainty in regard to the free-silver and Populistic craze having produced a very conservative and waiting disposition. In fact, there is a tendency in some such quarters to criticise the action of the city officials charged with the issue and sale of the bonds for not having inquired and taken proper steps with regard to a situation that was fully recognized by every one active in the bond market. They point to the fact that the state of Massachusetts, whose credit is as high as any in the world, recently offered $1,000,000 bonds and only obtained a single bid, while throughout the country at large the instances in which municipalities in excellent credit at ordinary times have been forced to adjourn sales of their bonds or to accept the terms offered by bankers' syndicates could be multiplied indefinitely. It will also be remembered that this is no new experience for New York city, but that the offer of an issue submitted just after the Venezuela excitement met with a similar reception from local investors and had to be placed abroad through a banking syndicate. Under such circumstances it is asked why the inopportune character of the transaction was not considered, particularly as the city could borrow temporarily and wait till the condition of the investment market offered assurances that the bonds would be absorbed. At the same time it is stated, on behalf of the municipal finance department, that the course pursued was necessary in view of a number of important public works, the progress of which was dependent upon the sale of the bonds in question. It has, indeed, since been rumored that a private sale will again be resorted to, though naturally there is no definite information on this point. The matter is only another illustration of the evil effects of the present uncertainty upon business and of the paralysis which doubt about the future inflicts on even the highest credit.

ENJOINING RATE-CUTTING.

"Government by injunction" is one of the current tendencies which were denounced in a recent political platform. The rate war which has been raging among the railroads of the south Atlantic states has, however, just given rise to a novel application of the power to enjoin possessed by the courts, the whole circumstances being calculated to raise a variety of interesting railroad and legal questions. The rate war itself was referred to in these columns last week. The principal contestants were the Seaboard Air Line and the Southern Railway. Other roads were, of course, drawn into the conflict, and among them the Port Royal & Augusta, a line in the possession of receivers and under the protection of the United States courts. The rate-cutting during the past fortnight reached a pass that threatened serious harm to the earnings of the Port Royal road, and its receivers secured from Judge Simonton, of the United States Court, a temporary injunction restraining the Seaboard Air Line, the Southern States Freight Association, and connecting lines, from putting into effect contemplated cuts in rates, particularly one of 80 per cent. in freight charges, which was to go into effect on August 1. The defendant corporations and association are also ordered to appear on August 15 and show cause why the injunction should not be made permanent.

This proceeding has at once checked the demoralization in southern rates. It should be mentioned that not only does the injunction restrain further cutting, but it directs the restoration of rates to the tariff in force on July 12. The roads involved have obeyed it, the Southern Railway with apparent alacrity, and the Seaboard Air Line with more or less criticism, and reference to the fact that the Port Royal & Augusta road is affiliated to the Southern Railway, and that the latter corporation may be presumed to have inspired its action. Mr. St. John, of the Seaboard, is quoted as saying: "It is easy to see that the whole of it has been inspired by the Southern Railway. If this great monopoly expects to throttle competition by appeals to the court, it will certainly be mistaken. I do not know what charges or statements are in the bill presented to the court, but I do know that the time has not yet arrived in this country when a rival railroad can successfully appeal to the courts upon a hearing on the merits of the case and perpetuate its monopoly and prevent the public from the benefits of competition. When our side of the case is heard and the court is fully advised, there can be but one end to such an effort, and that is that our position will be sustained. We will meet any suit that has been brought, and when it is over and the orders of the court are set aside, we will proceed with the contest to the end. The issue cannot be met in this way, but will have to be met, sooner or later, on the lines upon which it is now proceeding."

On the other hand, railroad authorities at the north who are not directly interested in the controversy between the Southern Railway and Seaboard Air Line are inclined to favor this assertion of power on the part of the courts as tending to put a desirable check on competitive outbreaks in the future. The case will doubtless be appealed, but, as it stands, furnishes the basis for an exceedingly interesting definition of the authority the courts exercise when a road is in their hands and in the possession of their offices, and is threatened with loss and damage from an outbreak of competitive rate-cutting.

INTERNAL REVENUE STATISTICS.

A preliminary report of the operations of the Internal Revenue Bureau, just submitted by the commissioners to Secretary Carlisle, puts the receipts from all sources for the year at $146,830,615, which represents an increase of $3,584,537 as compared with the preceding year. It appears that Illinois returned more internal revenue than any other state, the total collections there being $31,973,133. New York came next in order with $21,620,470. Kentucky stood third with $14,903,110. Ohio and Pennsylvania were close together with $11,947,724 and $11,145,548 respectively. Indiana had $7,693,154, Missouri $6,959,915, Maryland $5,968,895, and Wisconsin $5,012,077. The remaining states fell below the $5,000,000 mark in the returns.

The statistics regarding the sources of internal revenue present some features of interest. From spirits the receipts were $80,670,070, an increase of $807,443. The largest item of increase under this head was from fruit spirits, the receipts of $1,584,879 being $488,863 in excess of last year. Retail liquor taxes increased by $221,106, rectifiers' taxes $49,458, and the wholesale liquor dealers' special taxes $46,243. Tobacco brought in a revenue of $30,711,620, or $1,006,721 more than was derived from that source in the preceding year. There was a general increase in all the items under this head, the largest being in cigarettes under three pounds per thousand, where the receipts were $2,021,195, or $357,493 more than in the preceding year. Chewing and smoking tobacco brought in $15,221,028, $323,849 more than the preceding year. Cigars and cheroots over three pounds per thousand realized $12,713,267, an increase of $221,350, and snuff afforded revenue of $752,915, an increase of $103,027. From fermented liquors there were derived taxes aggregating $33,784,235, or $2,143,617 more than during the preceding year. Ale, beers and similar liquors brought in $33,139,141, an increase of $2,094,826. There was a falling off of $189,778 in the taxes realized from oleomargarine, the revenue from which amounted to $1,219,432. The decrease was general in all the items under this head, the largest item being $112,817 in the direct tax on oleo, while retail dealers' taxes shrunk $57,215, and wholesale dealers' taxes $26,520.

Miscellaneous receipts showed a diminution of $182,600 during the year, the largest item being $122,548 decrease in the receipts from playing cards, which were only $259,853. During the past year 67,039,910 gallons of spirits distilled from other materials than fruit were withdrawn for consumption, a decrease of 7,413,129 gallons as compared with the preceding year. Cigarettes to the number of 4,042,391,640 were drawn out, which was 714,987,860 more than were consumed during the preceding year. The number of cigars and cheroots withdrawn were 4,237,755,943, an increase of 73,783,503. Chewing and smoking tobacco were taken out to the amount of 253,667,137 pounds, an increase of 5,397,499 pounds. The cost of the collection of the revenue amounted to $4,044,351, giving a percentage of cost of collection amounting to 2.70, which was a reduction of 0.18 per cent. as compared with the preceding fiscal year. It is to be said, however, that these figures

and the calculations resting on them are preliminary, and that the exact cost cannot be determined until the completed accounts have been received.

BANKING PROFITS IN LONDON.

Notwithstanding the extraordinarily low interest rates that have prevailed in the London money market, the large banks there continue to earn and pay very handsome dividends. The enormous accumulation of idle money at the world's financial center of course necessitates a correspondingly depressed scale of interest and discount to the banks in which it is heaped up. At the same time the amount is so large that even a small return constitutes, in the aggregate, a very considerable sum. The returns for the first half of the current year, which have just been made, have been compared and tabulated by the London *Statist*, and furnish some interesting details upon the condition and principal of joint-stock banks of that city, the Bank of England, of course, being excluded from the comparison.

It is remarked, in the first place, by the authority in question, that business has been somewhat more profitable during the six months just ended than in the first half of 1895, though the improvement has been small. The refusal of the banks to lend upon mining stocks is noted, and in view of this and of the cheapness of money, the occasion for surprise is that the banks have done so well. The average discount rate in the open market for the half year was about the same as during the corresponding period last year—⅝ per cent.—and to show how unprofitable they have been, the *Statist* presents a tabulated comparison, going back for twelve years, of the average Bank of England rate for the first six months in each year, with open market discount quotations and the rate allowed on deposits by the chief banks and discount houses. This interesting table is as follows:

RATES PER CENT. PER ANNUM.

Half-year ended June 30.	*Bank of England rate.*	*Open market rate. Discount.*	*Deposit rate (notice). Discount houses.*
1896	£2 0s. 0d.	£0 16s. 10d.	£0 12s. 8d.
1895	2 0 0	0 16 11	0 13 1
1894	2 4 8	1 5 [illegible]	1 4 9
1893	2 16 4	1 17 2	1 10 8
1892	2 13 1	1 9 3	1 6 7
1891	3 11 6	2 14 11	2 6 8
1890	4 4 8	3 0 9	2 17 4
1889	3 [illegible] 1	2 [illegible] 0	1 17 4
1888	2 12 6	1 11 11	1 9 8
1887	3 4 1	2 0 0	1 17 7
1886	2 12 5	1 12 [illegible]	1 9 5
1885	3 9 7	2 12 3	2 8 2

Taking the five principal London banks, the profit of each for the first half of the years from 1885 to 1896, inclusive, are given as follows:

Six mos. end'g June 30.	*London & West.*	*Joint.*	*Union.*	*City.*	*London & Shwn.*
1896	£150,000	£90,000	£86,000	£40,000	£50,000
1895	138,000	92,000	79,000	41,000	36,000
1894	150,000	88,000	81,000	41,000	35,000
1893	169,000	95,000	89,000	51,000	34,000
1892	185,000	93,000	89,000	48,000	31,000
1891	229,000	98,000	108,000	60,000	29,000
1890	267,000	119,000	124,000	72,000	25,000
1889	249,000	118,000	119,000	59,000	19,000
1888	211,000	115,000	117,000	56,000	14,000
1887	237,000	130,000	109,000	53,000	11,000
1886	203,000	116,000	105,000	51,000	12,000
1885	232,000	113,000	107,000	51,000	12,000

The aggregate profits of the institutions in question for the first and second halfs of the years in question are also given in the following form:

	First half.	*Second half.*	*Year.*
1896	£416,000	----	----
1895	387,000	£389,000	£781,000
1894	390,000	351,000	747,000
1893	438,000	433,000	871,000
1892	447,000	404,000	851,000
1891	522,000	476,000	998,000
1890	606,000	581,000	1,187,000
1889	564,000	530,000	1,094,000
1888	513,000	518,000	1,031,000
1887	543,000	504,000	1,047,000
1886	489,000	501,000	990,000
1885	514,000	437,000	951,000

From this it will be seen that while the increase over the first six months of 1895 is an appreciable one, the chief London banking institutions outside of the Bank of England are very far from showing the same ratio of earning power that they enjoyed a few years ago, when the average discount rate in the open market was up to 1½ per cent. In speaking of the business of the past six months, the *Statist* intimates that the flood of new corporations that have been brought upon the market has helped the banks very materially, and created a great many transactions in the form of short loans to brokers or subscribers upon such securities. At the same time it would seem that the chief institutions referred to in the above tables have been developing their branch business, this course being particularly noticeable in the case of the London & Southwestern Bank. In other words, so keen is the competition in banking there that the largest and oldest institutions of the British capital have to follow a progressive policy in order to secure satisfactory results.

The dividends paid since 1891 by the five banks named and two large discount companies are given, together with a comparison of the prices of shares in 1891 and at the present time:

RATE OF DIVIDEND PER CENT. PER ANNUM.

THE RAPID TRANSIT DECISION.

Another step has been reached in the litigation regarding rapid transit in New York city. It will be remembered that the Supreme Court at Special Term some months ago dismissed the complaint against the city authorities and the Rapid Transit Railroad Commission in the suit brought by the Sun Printing and Publishing Company. This decision of the Special Term has now been affirmed by the Appellate Division of the Supreme Court, though upon the main question involved the court is divided, three judges sustaining the reasoning of the court of first instance and two dissenting therefrom.

The opinion of the majority, which is written by Judge Barrett, points out that the legislation, the validity of which is involved in the case, is assailed upon many grounds, of which the most important is that it violates the constitutional provision that no county, city, town or village shall be allowed to incur any indebtedness except for county, city, town or village purposes. The question is thus raised whether the construction of a rapid transit railroad wholly within the limits of a city is a city purpose. The court holds that it is, saying: "New conditions constantly arise which confront the legislature with new problems. These needs may be so general in their nature as to affect the whole country or the whole state, or they may be local and confined to a single county or municipality. In any case, it is the duty of that legislative body which has the power and jurisdiction to apply the remedy. To hold that the legislature of this state, acting as the *parens patriæ*, may employ for the relief or welfare of the inhabitants of the cities of the state only those methods and agencies which have proved adequate in the past would be a narrow and dangerous interpretation to put upon the fundamental law. No such interpretation has thus far been placed upon the organic law by the courts of this state. Whenever the question has been considered it has been universally treated in the broadest spirit. If any doubt exists as to whether or not this is a city purpose, it must be resolved in favor of the legislative action."

Objection has been made as to the manner in which the road was to be controlled or operated through contractors. As to this objection, the court says that it is the first time that it has been suggested that the city purpose referred to in the constitution of the state relates to the method of doing a thing rather than to the thing itself. The machinery, the court says, is not the purpose. It is further held that although the Rapid Transit Railroad Commissioners were named in the act and appointed under a general act, they are local officials so far as their duties in each city of 1,000,000 inhabitants or more is concerned, and therefore that their appointment was lawful; that local officers may be appointed in a general act as well as in a local act, and that the act in question appoints a local board for each city embraced within its classification, varied in its membership by variations as to certain local officials.

Two dissenting opinions have been filed, one by Justice Ingraham and one by Justice Rumsey. In reference to the question whether the construction of a rapid transit railroad is a city purpose, the latter says that, in addition to the ordinary purposes for which a city government is organized, it has imposed upon it certain other duties which are more especially governmental in their nature, but which its officials are required by statute to undertake as the agents of the legislature and as a part of the machinery of the state government, the chief of these duties being the making and improvement of the public highways and bridges and the regulation and control of docks and ferries, and the imposition and collection of taxes; that no purpose can be said to be a legitimate city purpose unless it falls within one of these classes, and that, so far as can be discovered, there is no case in the books, nor any discussion by a text writer, in which the acts which a city may properly perform as within a city purpose are not attributed to one of the objects stated above.

He adds: "If the power to build a railroad is to be regarded as a city purpose, it can only be so if it can be ranged within one of the classes above mentioned. This act is a general act, and if the purpose therein expressed is a city purpose for the city of New York it is equally a city purpose of any other city within its purview or within the state. The legislature were not called upon to limit the operation of this act to cities of a million of inhabitants any more than they were called upon to limit the operation of the street railway act to those cities; but if the building of a railway is a city purpose for one city it must be equally a city purpose for any city within the boundaries of the state. Indeed, if it can be said to be a city purpose to transport by artificial means the people of one city from one place to another for their business convenience or pleasure, I am utterly unable to conceive why it is not equally a town purpose to build railroads from one extremity of the town to the other, that those living at one end of a large town may more conveniently market their products or do their business at the customary place than they would with the present means of communication."

It will be seen that the constitutional and legal questions raised can scarcely be regarded as finally settled where the decision by the Appellate Division has been rendered by so close a margin. A decision by the state court of last resort will be necessary to put these questions finally at rest.

THE GREATER NEW YORK CHARTER.

The commission appointed to prepare a charter for the Greater New York, into which the existing municipalities included within the terms of the bill passed by the last legislature are to be consolidated, has been making some progress with its work. A sub-committee has prepared a draft of a charter of which some portions have been so far completed that the gist of them has been communicated to the press. This submission of the committee's work to public attention and criticism is wise and proper, and the committee need feel little doubt that the criticism which the project of consolidation will meet will, in the main, be based upon public grounds, aud will be intended rather to be helpful than obstructive.

The new city it is proposed to call by the name of the City of New York. The claims of locality and of historic nomenclature are, however, to be met by the division of the consolidated city into nine boroughs, to be designated, respectively, Bowling Green, Manhattan, Harlem, Yorkville, the Bronx, Brooklyn, Williamsburgh, Queens and Richmond. The new city is endowed with all the powers, rights and privileges of a body politic and corporate possessed by the several municipal corporations other than counties which are consolidated. The debts, stocks, contracts and obligations of the consolidated municipalities are assumed by the new city, and all to be authorized hereafter are to be issued in the name of the new corporation. So all taxes, assessments, sinking funds and other revenues of the consolidated municipalities are to be maintained by the new corporation.

The legislative power of the city is vested in a council and a board of aldermen both together to be styled "The Municipal Assembly of the City of New York." The council is to consist of nineteen members, eighteen of whom are to be chosen by borough boards, two from each borough. The nineteenth member, with the title of "President of the City Council," is to be elected by a vote of all the qualified voters of the city. His term is for two years, and he is clothed with all the rights, privileges and powers, and required to perform all the duties now conferred or imposed by law on the president of the board of aldermen. The representatives in the council are to be elected by the borough boards at their first meeting in January, 1898. Their term of office is two years from the date of their election. The council is to hold its first meeting on the first Monday in January. The president of the city council is to act as mayor in case of the disability of the latter by reason of illness or absence from the city.

The board of aldermen is to consist of

one member elected from each of the assembly districts within the territory of the city of New York, as constituted by the act, or as changed hereafter by law, provided, however, that in a case where any fraction of an assembly district has been consolidated with the corporation known as the mayor, aldermen and commonalty of the city of New York, such fraction of an assembly district shall be entitled to one member of the board of aldermen until otherwise provided by law. The term of office of the aldermen commences on the first Monday of February, and continues for two years thereafter. The president of the board is to be chosen by that body itself. The heads of municipal departments are to have seats and a voice in the councils of the board, but no right to vote. A two-thirds vote will be required to pass an ordinary resolution over the mayor's veto, and a five-sixths vote if it involves the expenditure of money.

The municipal assembly is to have power to establish markets, make parks, build bridges, and to purchase or construct public buildings for the use of the city, and to create loans and to issue bonds therefor, payable at such times and in such manner and at such rates of interest as they may direct; but no such bonds are to be issued unless the proposition for creating the debt shall have been previously submitted to the electors of the city at a regular election, of which three months' notice shall have been published in the corporation newspapers, and such proposition shall have then received the affirmative vote of a majority of the voters at such election. The power to make ordinances and rules respecting the public health, police, excise, fire and buildings is restricted in so far as legislative power as to these subjects is conferred on the departments having those matters in charge.

The mayor of the new city is to hold office for two years, and, with a view to having responsibility for the administration concentrated in his person, he is to have the power to appoint and remove at will the heads of all the administrative departments except the comptroller or head of the department of finance. The departments are to deal with the subjects of finance, the treasury, audit, law, public works, public charities, corrections, fire, health, public parks, taxes and assessments, street cleaning, and education. The head of the department of finance is to be the comptroller, who is to hold office for four years, and is to be elected by the people. The other heads of departments will hold office for two years, with the exception of the commissioners of taxes and assessments, who are to hold office for six years. There appears to be no department of police, but there is to be a single police commissioner.

The duties of the mayor are to communicate to the municipal assembly, at least once in each year, a general statement of the finances, government and improvements of the city; to recommend to the municipal assembly all such measures as he shall deem expedient; to keep himself informed of the doings of the several departments; to be vigilant and active in causing the ordinances of the city and laws of the state to be executed and enforced, for which purpose he may call together for consultation and coöperation all the heads of departments, and generally to perform all such duties as may be prescribed for him by the city ordinances and the laws of the state.

INSOLVENCY IN THE UNITED KINGDOM.

The official statistics of insolvency in the United Kingdom, which are given in the annual report of the Board of Trade on the working of the Bankruptcy acts, show that the total number of cases of bankruptcy and deeds of arrangement in 1895 was 7,858, a decrease of 798 on the results for 1894. The total liabilities were £11,397,212, a decrease of £1,985,693; the assets, £4,586,015, a decrease of £924,927, and the estimated loss to creditors, £8,328,254, a decrease of £1,367,235. The number of failures during the past year shows a reduction on that of 1894 amounting to about 9 per cent.; the liabilities show a reduction of nearly 15 per cent. The estimated loss to creditors is the lowest since 1890, and shows a reduction of over 23 per cent. as compared with 1893. These figures are regarded as indicative of the improved condition of business. The most conspicuous increase was in the case of solicitors and the largest reduction was in the case of wool manufacturers.

The report comments at some length on the failures among the solicitors, saying that it is noteworthy that out of the group of 39 cases, each involving liabilities of £20,000 or more, there are five cases of solicitors who are responsible for over half a million of liabilities, while below the limit of £20,000 there were 37 other solicitors against whom receiving orders were made, making 42 in all, with liabilities amounting to the enormous sum of £645,643, showing a great increase as compared with the previous years, though the failures of solicitors have been heavy for some years past.

It has been said at times that private arrangements are only practicable in the better class of cases where the debtor's conduct is not open to serious objection. The report regards it as somewhat significant that while forty-two solicitors, with liabilities for £645,643, came under the Bankruptcy act last year, only five, with liabilities for £27,679, wound up their affairs by means of deeds of arrangement. In two cases in particular, it appears, the firms were of high standing, but they were not content with the ordinary work of legal practitioners, but carried on banking or money-broking businesses, in the course of which they received and lost large sums of money deposited with them by their clients. The investigations, it is said, disclosed a deplorable want of system on the part of the debtors, which was bound to lead to disaster sooner or later. Upon this feature of the showing the report says: "A solicitor may, of course, be a competent financier, but his professional training is no preparation for such a career. On the contrary, the bankruptcy records tend to show that in departing from his legitimate work he is not unlikely to imperil the interests both of himself and of his clients. It appears to be a matter for consideration whether some steps should not be taken to discourage solicitors from engaging in pursuits so alien to their vocation and special qualifications, either by action on the part of the professional bodies themselves or by legislation for the protection of classes chiefly affected by breaches of trust, and who, being mainly women and children, are, as a rule, unable to safeguard their own interests."

Regarding the showing, as a whole, Sir Courtenay Boyle says: "The decrease in the number and financial importance of trading failures during recent years is certainly a fact of some economic importance, and the analysis of failures in various trades may prove interesting, not only to those engaged in these trades, but to the general student of commercial sociology. Violent fluctuations of prosperity and adversity appear to mark some occupations, while others seem to show steady tendencies in a uniform direction. The information in regard to the failures of farmers during the past five years points to a deep and continuous pressure of adverse circumstances affecting agricultural interests, only too much in accord with other well-known facts relating to that important industry. The decrease in the insolvency of the textile trades, taken as a whole, appears to indicate an important improvement in the conditions under which these trades are carried on; and there may be traced a continuous growth of the liabilities of insolvent solicitors during the same period. * * * On the whole, it appears to be the fact that the annual amount of trading insolvency, so far, at least, as private traders and partnerships are concerned, is steadily diminishing, and that it has during the last few years attained a considerably lower level than at any time during the present generation. This is a fact which should not be lost sight of in any review of the position of English commerce. It would be a mistake to treat this fact as bearing conclusively upon the question of the prosperity of trade, but it appears to indicate clearly that, so far as the system of credit is concerned, trade rests on a sound foundation."

THE TRANSVAAL OUTLOOK.

The conviction of Dr. L. S. Jameson and his companions in last December's raid upon the South African Republic of an offense under the English Foreign Enlistment act, and the sentence of the leader to fifteen months' imprisonment, with shorter varying terms for his immediate staff, is another chapter in a record of the most discreditable kind for the British people. That the sympathy of the mob, as well as of the upper classes in London, is with the convicted defendants there is ample proof. Moreover, the fact that Cecil Rhodes, the real head of the conspiracy and the master hand that directed the movements of Dr. Jameson and the other puppets, has not also been placed on trial constitutes a serious obstacle to accepting the facts that have already transpired as a complete evidence of good faith on the part of the British government. It is, indeed, cabled that Mr. Rhodes is ready to come to England and stand trial if one is desired. This, however, seems to be for effect, and is not likely to have any practical results, as the matter is one that involves the fortunes, not to say the reputations, of too many people more or less prominent in financial circles in the English metropolis.

The question, however, is as to how the turn matters have taken will affect the Transvaal Dutch, and whether the punishment meted out to "Dr. Jim" and his associates in the raid will be considered a sufficient expiation. On this point there is no definite information. The indications, however, are that no extraordinary trouble will be created, and in view of the mild, almost contemptuous, treatment accorded to the principal members of the Johannesburg Reform Committee for their share in the abortive rising that took place when Jameson's troopers were on the march, it seems improbable that the burgers of the republic will cherish any vindictive spirit. That they will be watchful it is needless to say, but the whole matter points to the absolute failure of revolutionary methods in a modern community even when real grievances exist. The latest advices from South Africa are, in fact, favorable to a peaceable solution of the existing troubles, and it would seem that the strong sense and fairness of President Krüger are making themselves felt upon the deliberations of the Volksraad or congress of the republic. The first fruits of this are seen in the removal of the religious disqualifications against office-holding by certain Christian denominations, and a bill is under consideration for the restriction of sales of liquor to native workmen. The special correspondent of one of the leading London financial journals says, under this head: "In general form the bill is warmly supported by the mining industry, and will, no doubt, enable employers to get much more work from their 'boys.' The Raad will sit for five or six weeks yet, and there is time, therefore, for other important reforms to be carried. President Krüger recognizes the necessity for judicious reforms, and his influence will prevail if too great impatience is not shown. All through the crisis he has exhibited high ability, and now that the authority of his government has been vindicated, he will, in course of time, carry the necessary reforms. But too much must not be expected all at once. Meanwhile, labor has become so abundant that wages are being reduced in several quarters, and the expectation is very general that a considerable further reduction will be effected. Water seems to be abundant also, and although the rinderpest is interfering with locomotion, yet it is increasing the supply of labor, so that it is not proving an unmixed misfortune. The service on the Netherlands Railway, too, is improved. Last month there was so great a block that the delivery of coal was greatly delayed. The difficulty has been overcome, and the coal supply is now becoming abundant. There seems every reason, therefore, to hope that much more work will be done in the current month than has been possible since the beginning of the year, and that the crushings, therefore, will be the largest ever yet recorded." This would point to an important increase in the gold supply from the South African mines, which at the moment is the most significant economic fact in connection with the whole matter.

CHINESE TRADE AND FINANCE SINCE THE WAR.

Mr. Jameson, the British consul at Shanghai, in a recent report, furnishes some interesting statistics bearing upon the financial and industrial position of the Celestial Empire since the war with Japan, and a number of even more interesting remarks and conclusions upon the tendencies in that connection that have developed in China as a consequence of the events in question. The report, it is true, deals with the matter largely from the standpoint of British commercial interests in China. Nevertheless, the facts, though not altogether novel, have an interest and importance of their own, and, as summarized in the leading English trade and financial journals, are well worthy of detailed examination.

The first point made is that the war which was in progress until May last made no impression on the trade of Shanghai itself, which, indeed, seems to have been the case at all the large treaty ports. During 1895 there was, indeed, a considerable

increase in both the exports and imports at Shanghai, and it is also noticeable that Great Britain and her colonies supplied 79 per cent. in both cases. The idea that German and other foreign competition is driving British trade out of the Chinese market finds no countenance from Mr. Jameson's report, and he openly scouts the idea that in the future the danger to the British commercial interests in that country will come from without, though the idea is advanced that what the Englishman and all other foreign traders, for that matter, have to fear is the competition of China herself.

The most interesting portion of the report deals with the effects of the war upon the Chinese people and their government. In this connection Mr. Jameson emphasizes a fact already pretty well known, namely, that, violent as the shock of defeat was, it has scarcely made any impression on the people at large, nor has it made the official class one whit wiser or better. China is a country of vast potential wealth, with a hard-working and frugal population, but all trade development is hampered by the inability to bring her products to market. The object of her government should be to increase the facilities for inland transportation. If China, says Mr. Jameson, would "have the courage frankly to enter upon a railway development, a new era would soon set in for this ancient country." But, as a matter of fact, while there is talk of railway building, as there always has been, this expert authority says that there is no better prospect now than there was ten years ago of any general introduction of railways or of the inauguration of any reform whatsoever so far as they depend on the initiative of the Chinese government. But, says one of the English papers which comments on the report, "there are two new factors in the situation arising out of the war which may have far-reaching consequences. The first is the right to import machinery and establish manufactures at the open ports, and the second is the heavy foreign debt which China has been obliged to incur. In previous reports Consul Jameson has spoken of the establishment of native-owned cotton mills at Shanghai and of the efforts which foreign merchants were making to obtain a share in what promised to be a very lucrative industry. Until the war these efforts, for reasons which we need not go into, were always frustrated. But after China's defeat a clause was inserted in the Japanese treaty expressly conceding the right to import machinery and establish manufactures at all or any of the open ports. 'No sooner was this privilege established than half a dozen foreign joint-stock spinning and weaving companies were in the field. Four were successfully floated—three British and one German—and mills to run about 40,000 spindles each are now in course of erection.' In view of what follows, it will be seen that there should be a great future before the cotton-spinning industry in Shanghai. For the last three years the demand from Shanghai alone for Bombay yarn has been 180,000 bales per annum, of the value of £1,500,000. Since the commencement of the year yarn is being freely imported from Japan at 72 taels per bale, 4 taels more than Bombay yarn fetches. This yarn is mostly made from Chinese cotton, which, after paying export duty and bearing all the cost of transport, can be sent back to China in its manufactured state and yet pay the mill-owner a profit."

The same authority proceeds to comment upon the large debt contracted by China in consequence of the war, and in the light of Mr. Jameson's report, finds the situation less promising. It says: "The national debt may be taken at about £40,000,000, requiring, roughly, 16,000,000 taels per annum for interest and sinking fund. The present customs revenue is about 21,000,000 taels, from which 2,000,000 taels must be deducted for costs of collection and other necessary outlay, so that the free surplus for the government is only about 3,000,000 taels. It is obvious that the reduction in the only source of revenue controlled by the central government must entail additional taxation in some form or other, and the particular form in which it is imposed will be a matter of the utmost consequence both to China and to foreign trade. The customs tariff cannot be increased, because it is fixed by treaty, and the government at Pekin will, therefore, have to requisition the additional revenue that is needed from the provincial governments. The danger seems to be that the provincial authorities will raise the required funds by increasing the likin tax (or internal imposts on trade from one province to another), which is described by Mr. Jameson as the very worst of all possible forms of taxation—costly, cumbrous and vexatious. If the likin levies are increased we are told that commerce will be strangled, no produce will come to market, and, of course, nothing will be bought in return. The remedy for the situation, according to Consul Jameson, is suggested by the fact that the customs revenue has grown from 7,000,000 taels in 1864 to 21,000,000 taels in 1895, while the other branches of revenue have remained stationary." Instead of increasing taxation upon all trade in the interior, the best plan would, in his opinion, be to abolish imposts of that kind. There would be a loss at first, but the gain would soon come, though the second necessity, as already referred to, is a system of railroad transportation.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

A conference of representatives of leading mercantile and legal bodies in Scotland was recently held in Edinburgh to consider to what extent it would be practicable to arrange for joint action in reference to the codification of mercantile law. Several letters from men prominent in promoting codification were read at the meeting, the general view sustained by the writers being that within certain limits at least the codification of mercantile law was practicable and desirable. Stress was laid on the success with which the Bills of Exchange and Sales of Goods acts have met in practice. The conference passed a resolution declaring that the feasibility and utility of a code of law have been proved by the experience of foreign countries and British colonies, as well as by the codifying statutes in the United Kingdom relating to bills of exchange, sales of goods, etc., and have been recently emphatically recognized, as regards mercantile law, by the unanimous resolution of the congress of the chambers of commerce of the empire. Other resolutions were adopted declaring that the completion of a mercantile code, i. e., of the law relating to mercantile transactions, would, at the present time, be the most suitable installment of codification, and should be carried forward without delay, and that, under proper safeguards, the assimilation of the law of England and Scotland effected in the codifying statutes already passed should be continued in completing a mercantile code. Steps are to be taken to bring the subject to the attention of Parliament.

Press dispatches from Rio report the arrival at that port on their way to Buenos Ayres of the party of American manufacturers which left New York on July 1 via Southampton and London to visit several of the countries of South America. The objects of this modern Argonautic expedition were fully set forth in BRADSTREET'S when the party was in process of formation. Briefly stated, it was designed to give American manufacturers and business men an opportunity to study the possibilities of the South American markets, with a view to possible extension of trade relations between this country and South America. Mr. Theodore C. Search, a Philadelphia hat manufacturer, is at the head of the enterprise, and among the prominent manufacturers who are of the party are T. Stewart Wood, J. M. Studebaker, Sr., J. M. Studebaker, Jr., Frederick Stearns, Henry D. Johnson, J. R. Kilbourne, Samuel E. Bacon, John A. Johnson, Henry R. Gilbert, W. T. Adams, T. D. Palmer and M. O. Maxson. Mr. William Harper, of the Philadelphia Museums, and Mr. Geo. W. Fishback, of the American Legation at Buenos Ayres, who represents the government of the United States, are also in the party. Judging from the press accounts, an interesting and instructive reception awaits the party in Buenos Ayres, at which city it is expected to arrive on August 2.

The clerks in the railway mail service have just received a warning against extreme political activity in the approaching campaign in a general order issued by General Superintendent White, by direction of the Postmaster-General. In this order it is set forth that while the department does not attempt or desire to control the political opinions of any one connected with the postal service, it insists that employees of the railway mail service shall not take an active interest in politics in the way of attending conventions as delegates, making political speeches or assisting in the management of political campaigns. These employees, it is said, should recognize the fact that their tenure of office depends upon themselves. If they conform to these requirements, are efficient, honest and courteous to the public, their officers and comrades, and abstain from unseemly and indecent language in discussing candidates or parties, they may reasonably expect to remain in the service. All this will not interfere with their voting according to the dictates of their own consciences, or expressing their opinions in an intelligent and courteous way. More than this, however, is declared to be detrimental to the best interests of the service, and in violation of the postal laws and regulations, and also of the order of the President issued July 14, 1886, which is still in force, and was made a part of the postal laws and regulations subsequently and repromulgated by the Postmaster-General May 25, 1894.

In accordance with the provision of the constitution of Canada requiring members of a new administration to present themselves to their constituents for reëlection, elections have been held this week in a number of constituencies represented by members of the new government. All of them, including the new premier, Wilfred Laurier, have been returned without opposition.

CURRENT BUSINESS NEWS.

Industrial.

The twenty-five delegates to the Indiana State Convention of Bituminous Miners in Terre Haute, last week, voted unanimously to remain out against the reduction from 60c. to 55c. a ton in the price of mining.

Mayer Schonfeld, who is leading the New York tailors' strike, claims this will be the biggest labor demonstration "ever made on the east side."

The lockout at the Brown Hoist and Conveying Works in Cleveland, Ohio, has ended. The company removes the blacklist and reëmploys all the union men.

The Lasters' Boot and Shoe Workers' Union, of Lynn, Mass., has declared a lockout in a shoe factory on account of the firm's action in discharging a number of employees on Saturday. "A number of men brought from outside to take the places of the locked-out workers were intercepted and persuaded to stay away."

On July 26 "will occur the beginning of a resumption of iron mills, which will soon put to work at least 10,000 men. It is estimated that at least that number are interested in the settlement of the wage scale with the Ohio manufacturers at Youngstown."

The steel billet pool, formed a few months ago, "is in danger of disruption. A special meeting of the pool has been called." The trouble is over the allotments, "which are proving unsatisfactory to the smaller concerns in the pool. Business is much duller than was anticipated, and in consequence the Carnegie and Illinois Steel companies, the two largest concerns in the combination, are getting the lion's share."

Senator Proctor of Vermont says that New England people are more interested in starting the mills to work than in starting mints.

The ranks of the idle garment workers on the east side were swelled on Wednesday by the strike of 3,000 members of the Children's Jacket Makers' Union, whose grievances are practically the same as those of the other tailors already on strike. The total number of those now on strike is close to 20,000.

President M. D. Ratchford, of the Ohio Miners' Association, has issued a call for a state convention of miners, to meet in Columbus, Ohio, on August 11, to take up the question whether the contract lease system of operating the mines shall be permitted to continue. "It has been adopted in many places in the Hocking Valley, and is a violation of the wage scale agreement."

The Association of Clothing Contractors in New York has decided to refuse to sign the agreement drawn up by the Brotherhood of Tailors, whose members are on strike. Contractors outside of the association, however, are signing the agreement.

Commercial.

The Chattanooga *Tradesman* says: "The condition of the iron and steel market is still unsatisfactory. Very little is being done either in raw or finished material, and prices are weak. The fact that production is being curtailed is encouraging, and will tend to strengthen the market."

The St. Paul *Trade Journal* notes the continued failure to attribute a large proportion of business "failures to their legitimate cause, 'destructive competition,' which, having largely done its work in wholesale manufactures and trades, is now making its devastating inroads on the retailers of the country."

Messrs. Curtis & Romaine, New York, say: "The reserve of wheat carried over in the United States on July 1, 1896, from different authorities:

	Bushels.
Official visible supply	47,860,000
BRADSTREET'S addition in railroad, private elevators and 30 minor towns	9,944,000
Estimated on Pacific coast	4,196,000
Estimated invisible and second stock	5,000,000
Estimated in farmers' hands	25,000,000
Total carried over	92,000,000

Stocks of wheat in St. Louis private elevators on July 1 amounted to 196,000 bushels.

The *American Agriculturist* says: "Our farmers are now receiving checks for that long hung-up bounty on maple sugar. The sums range all the way from $5 to over $2,865, making a total of $82,104 for the pockets of New England maple sugar makers. New York claims $27,000, Pennsylvania $5,530, Maryland $2,721, Ohio $3,165." The paper named "pointed out at the time that claims for the maple sugar product of 1894 filed before August 28 of that year would probably be paid. Many farmers wouldn't take the little trouble required to do this because it won't amount to anything, they said. But those who heeded our advice are now the happy possessors of nearly $125,000 of extra cash that they never would have had otherwise."

According to the Chicago *Tribune*, the recently enacted filled-cheese law has practically "killed that industry in Illinois."

As suggested in the *Railway Review*, "it is understood that the Post Office Department will not attempt to interfere with the carrying by a railroad company of its own business mail upon its own lines."

For nearly a year the New York *Iron Age* has published a series of short essays on the currency question. In one of the latest of these occurs this statement: "In 1864, during which year the greenbacks reached their lowest value, the average of wages in 53 occupations had increased 34 per cent. since 1860. But the prices of articles that absorbed more than two-thirds of the income of the average family had risen 72.1 per cent."

It is thought that locking through the American lock at Sault Ste. Marie will begin during the first few days in August. The dredging in the approaches is in pace with the work on the lock proper. The machinery is receiving finishing touches, and some of it has been "turned over," with eminently satisfactory results. The power house and office building will not be finished until after the close of the season, but this will in no way interfere with the operation of the lock.

A preliminary report from John S. Miller, Commissioner of Internal Revenue, for the year ending June 30, shows that receipts from all sources of internal revenue were $146,830,615, an increase of $3,584,537 over the last fiscal year. Receipts from spirits were $80,670,070; on tobacco, $30,711,629.

The new air motor cars were operated on the Third Avenue Railroad (New York) Thursday. "Their operation was a success, and the cars will be opened for traffic immediately."

The linseed oil trade is said to be not in good shape. "At the present cost of seed, say 72c., it can be turned over on a basis of 32c. for oil without a loss. However, there is no profit in the transaction. Most of the crushers have seed or its equivalent in oil that cost them from $1.10 down. Foreigners are said to be such sharp competitors of Americans in British markets that the export demand is falling off. Lots taken here for export were recently put upon the market."

Financial.

The following securities were sold at auction this week at New York:

1 Share Adirondack League Club, par value $1,500.	$700.00
50 Shares Pierce, Butler & Pierce Manufacturing Company, $100 each (hypothecated)	5%

A Baltimore dispatch says that "the receivers of the Baltimore & Ohio Railroad will pay out over $500,000 August 1 in semi-annual interest charges, due on the bonds of the company. These payments will include all the interest payable on that date by the Baltimore & Ohio, and there is to be no default."

The Philadelphia *Press* says: "Life insurance policy-holders in this country hold $9,681,000,000, under 10,407,875 policies. This represents not less than from 3,000,000 to 4,000,000 separate holders. Does anyone suppose that these 4,000,000 men and women, with at least 20,000,000 people dependent on them, are going to let a 50-cent dollar be palmed off on them without a struggle? Why should they? The contracts for these policies were made on a gold basis. The premiums have been paid on a gold basis. Shall the assets be reduced to a silver basis?"

Auditor Baldwin, of the Treasury Department, has finished compiling of the sugar bounty claims. "They aggregated $6,085,156 66. There were appropriated $5,000,000 to pay the bounty on this aggregate. The money in hand will pay 82 per cent. of the claims filed and allowed."

This is the way the world stands on the money question: "Countries on the gold basis are the United States, England, France, Spain, Portugal, Italy, Germany, Holland, Belgium, Austria-Hungary, Turkey, Greece, Roumania, Bulgaria, Denmark, Sweden and Norway, Brazil, the Argentine Republic and Chili. Russia is preparing to resume specie payments on the gold basis. India has stopped coinage of silver and is aiming at the gold standard. Venezuela and Ecuador are about to change from silver to gold. Silver standard countries are Mexico, Central America, Peru, Bolivia, Japan, China and the Straits Settlements."

The Russian loan of 1,000,000,000 francs ($200,000,000), issued by the Rothschilds in Paris, has been covered twenty-five times over.

California bankers have issued a pamphlet which concludes: "Convinced of the righteousness of our cause, and earnestly wishing to promote the general welfare, we unhesitatingly express our decided opinion that every vote against free coinage of silver at a ratio of 16 to 1 is a vote for return of confidence and prosperity; for benefit of all classes; for protection of your families and homes, and, above all, for the preservation of your country's honor."

Railroads.

The following gross and net earnings are reported for June:

	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.
Alabama Gt. South'n	$112,426	$115,998	$13,599	$29,969

The Chicago, St. Paul, Minneapolis & Omaha Railroad Company has declared a semi-annual dividend of 3½ per cent. on its preferred stock, payable August 20.

The Rome, Watertown & Ogdensburg Railroad Company's guaranteed quarterly dividend of 1¼ per cent. is payable August 15.

The all-rail east-bound shipments of dead freight from Chicago last week were 46,454 tons, against 52,740 tons the previous week and 46,544 tons the corresponding week of the previous year.

The Colorado Fuel and Iron Company has declared a semi-annual dividend of 4 per cent. on its preferred stock, payable August 20.

The executive board of the Southern Traffic Association appointed a committee of nine to formulate a policy and report on the rate war now in progress. The committee has recommended a sweeping cut of 80 per cent. on all classes of freight from eastern points to Atlanta, except on grain, wheat, flour, meal and hay.

The Northern Pacific Railroad was bought in by the reorganization committee at the foreclosure sale in Superior, Wis., last Saturday, the total price paid being $13,075,000.

The Chesapeake & Ohio Southwestern road was sold at auction, under foreclosure proceedings, last Saturday, to the Illinois Central, for $1,500,000.

Major Law, in his report to the British Parliament upon the railways of Asiatic Turkey, in reporting upon the Jaffa-Jerusalem railway, says that this road is approximately fifty-two miles long. "It is a narrow-gauge line, one meter wide. The railway was opened towards the close of the year 1892. The concession dates from 1888, and includes the right to make branches to Nablous and Gaza. The capital of the company is £160,000 in shares and £800,000 in 5 per cent. bonds. The working of this railway has so far not proved very profitable. I have not been able to obtain any precise figures as to the traffic and working expenses, but it is stated that the net profit has been under £2,000 per annum, and such a return is insufficient to pay the interest on the bond capital."

The *Electrical Review* says: "In casting up the electric railway progress made during the twelve months of 1896, we predict that this year will be the greatest yet in electric traction development."

It is announced that a contract has been concluded between the Japanese Mail Steamship Company and the Great Northern Railroad, which will enable the latter to issue through bills of lading from Buffalo to Yokohama and Hong Kong.

A news bureau dispatch from Des Moines, Iowa, says there is a "car famine" in that state. Grain holders have 25,000,000 bushels there in cribs, "who intend to hold for better prices. The next three weeks will probably see practical blockade on account of heavy movement."

Miscellaneous.

It is estimated that the amount of damage done by the recent flood in the valleys of the Monongahela, Cheat and Youghiogheny rivers will reach $200,000. The flood is abating.

The Privy Council has affirmed the decision of the Supreme Court of British Columbia in the case of the Esquimault & Nanaimo Railway against Bainbridge, which was argued July 9, 1896, raising the question of the right to mines in land granted for the construction of a railway. The Council ordered the appellant to pay the cost of the appeal.

The Secretary of the Interior has communicated to Attorney-General Harmon the dismissal of a number of suits now pending in the United States courts of Nebraska, Wyoming, Colorado and Utah against the Union Pacific Railroad, and about 10,000 settlers along the line of the road, to recover title to lands said to have been erroneously patented by the company.

Foreign.

The production of Argentine hardwoods has increased from a value of $21,071 in 1875 to $1,603,203 in nine months of 1895. "That country abounds in a vast amount of hardwoods suitable for cabinet work and other purposes, but it requires capital and enterprise to develop the full timber resources of the region. Much of the timber is far back in the Chaco regions of the Parana and Paraguay rivers, which renders the cost of getting the product to market greater than capital has yet been ready to undertake on an extensive scale. Yet there has been development, as the figures show."

A British blue-book shows that the number of visitors to the British Museum in 1895 was 542,423, a falling off of more than 36,000. The visitors to the reading room numbered 194,924, being 8,000 fewer than in 1894. The number of volumes supplied to readers was 1,405,866. The numbers of visits of students to the several departments was 232,484, against 264,864 in the previous year. The number of visitors to the Natural History Museum in 1895 was 446,737, a larger number than in any year since 1890.

If one may judge by recent "flotations, a new interest in the petroleum industry is being awakened among investors. The Standard Oil Company of Galicia, Limited, comes into existence with a capital of £1,000,000, of which £750,000, in 75,000 shares of £10, is now issued. It will acquire, according to the prospectus, two petroleum properties, held under registered titles, some absolute and others for unexpired terms ranging from twenty-two years to twenty-five years, comprising fourty-four oil wells in full production and certain boring and mineral rights, and the controlling interest in a petroleum refinery in working order, all situate in the oil belt of the Schodnica district in Galicia, which has the reputation of being highly prolific."

British official reports announce the failure of the grain harvest in nearly all sections of South Russia.

Chief Justice Davis, of the Exchequer Court of Canada, sitting at Victoria as local judge in admiralty, has awarded $3,163.50 damages to the sealing schooner Beatrice, which was seized in Behring sea by the American revenue cutter Rush, in August last. The seizure was held to have been illegal. This case was a test case, and other claims will be adjudicated in accordance with this decision.

Canadian Collector Milnes' report of the season's operation of the Canadian sealing fleet in Japanese waters is in the hands of the Dominion Minister of Marine and Fisheries. "It shows an average of 643 skins to each of the twenty-eight schooners at work, making a total of 18,004 skins. There is also the catch of the American schooners, totaling 3,808 skins, and of seven Kakodale sealers with 2,417 skins. The catch of the other American craft make up a total of 25,524 skins. On the whole, the catch is slightly better than last season's. The collector also reports that this year Victoria sealers shipped all their sealskins home from Japan by the Canadian Pacific Railroad steamers, and many of them sent home their shot-guns and rifles by the same steamers, in order to escape molestation in the Behring sea by United States cruisers, which hitherto have made many unnecessary searches of Canadian craft, to ascertain whether they were complying with the terms of the Paris award which prohibits the use of firearms in the Behring sea."

The Cunard Steamship Company are reported to have ordered, at Belfast, Ireland, the construction of three new steamships of 5,000 tons each, for the transatlantic transportation of freight and the cheaper passenger traffic.

The British House of Commons has ordered a committee to make an inquiry into the administration of the British South Africa Company.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Negotiable Paper—Indorsement—Notice.

The Supreme Court of Minnesota held, in the recent case of Tourtelot vs. Bushnell, that mere notice to an indorser of negotiable paper for value before maturity, in the usual course of business, that the same is accommodation paper, will not, without more, prevent him from being an innocent purchaser in good faith.

Public Funds—Bank—Loans.

The Supreme Court of Indiana held, in the recent case of Winchester Electric Light Company vs. Veal, that public officials charged with the collection, custody and disbursement of public funds are required to keep the public moneys in a safe place, ready to be paid over to the proper person whenever demanded; that a solvent bank is such a "safe place," but that loaning the money at interest is a violation of this obligation.

Assignment—Acknowledgment.

The Supreme Court of Minnesota held, in the recent case of Bennett, Assignee, vs. Knowles, that every assignment for the benefit of creditors, whether made under the assignment or insolvency laws of the state, is void unless duly acknowledged; that the acknowledgment of a deed for a corporation can only be made by some officer or representative who has authority to execute it for the corporation, and that the certificate thereof must either substantially follow the form prescribed by statute, or, if some other form is used, it must appear prima facie from such certificate, when read in connection with the deed, that the person making the acknowledgment was authorized to execute the deed for the corporation.

Boomage Rights—Stream—Farm.

The Supreme Court of Minnesota held, in the recent case of Rasicott vs. Little Falls Improvement & Navigation Company, that under a deed from the plaintiff and his wife whereby they granted to defendants' remote grantor certain boomage rights and privileges in a driving stream bordering on plaintiff's farm, taking into consideration the circumstances of the transaction, the particular situation of the parties and the condition of the thing granted, defendant did not obtain the right to deprive plaintiff of the beneficial use of his farm by maintaining booms and assorting works at a point two or three miles down the stream, whereby log jams were formed and the waters dammed and penned up so as to flood the farm and practically destroy its use.

Note—Accommodation—Bank—Creditors

The Supreme Court of Georgia held, in the recent case of Kaiser vs. United States National Bank, that where a promissory note executed solely for the accommodation of a bank and intended by the makers to be used for its benefit only was made payable to the order of its cashier and indorsed in blank, the mere fact that the president of that bank negotiated the note for his own personal benefit to a third person who knew he was such president would not of itself be notice to that person that this action of the president was unauthorized or improper, nor would this fact be sufficient, without more, to put the third person upon inquiry as to the legality or correctness of the president's conduct in the premises, and that a creditor of the president who in good faith received the note from him before its maturity and without notice of the equities existing between the makers and the payee, was a bona fide holder for value in the due course of business, although the creditor took the note as collateral security for an existing debt of the president, and for this purpose and upon this consideration only.

Additional Insurance—Mortgage.

In the case of Hardy et al. vs. Lancashire Insurance Company, recently decided by the Supreme Court of Massachusetts, the plaintiffs sued upon a policy of insurance taken out by one Brown payable to them "as their interest may appear." The policy was for $3,000, and there was a mortgage for that amount upon the property. The policy sued on was in the Massachusetts standard form and had attached a clause which permitted the taking out of additional insurance. Subsequently Brown, the mortgagor, procured additional insurance on the property in another company to the amount of $1,500, payable to himself, and the plantiffs never had any knowledge of this additional insurance until after the loss occurred. The defendant insurance company contended that it was liable for only thirty forty-fifths of the loss. The plaintiffs contended that their rights as mortgagees to recover to the extent of their interest were not affected by the additional insurance, as it was not obtained by them or for their benefit, or with their knowledge. The court held that, under the circumstances, the plaintiffs were entitled to recover to the extent of their interest in the insured property against the defendant, without respect to the additional insurance taken out by the mortgagor.

Insurance—Policy—Variance.

The Supreme Court of Georgia held, in the recent case of Leigh vs. Brown, that where a policy of life insurance which was duly delivered to an applicant differed in any material respect from the kind of policy for which he had contracted, it was his duty, if he did not desire to retain and accept the policy received by him, to return or offer to return the same within a reasonable time to the company, or an agent thereof authorized to receive it, and upon failing to do either, the applicant could not avoid paying a promissory note which he had given for the first premium due upon the policy, and that if such applicant, without returning or offering to return the policy as above stated, delivered it to one who was not an agent of the company nor in any way connected with its affairs, and after a lapse of some months an agent of the company casually found it among the papers of the person last referred to, who had died, he being the agent's father, the plaintiff was not discharged from liability upon the note in question.

Anti-Cigarette Law Unconstitutional.

The Iowa legislature passed a law, which went into effect this month, which prohibited absolutely the manufacture or sale of cigarettes within the state, or their importation into the state. One McGregor was arrested for importing cigarettes and selling them in the original packages, and an application for a writ of habeas corpus was made to Judge Sanborn, of the United States Circuit Court at St. Paul. The attorneys for the petitioner rested their arguments on the decision of the Supreme Court of the United States in the famous prohibition case that went up from the same state some years ago, after the prohibition law was enacted there, which decision was to the effect that the federal Constitution, having delegated to Congress the power to regulate commerce between the several states, the legislature had no power to prohibit the importation of liquors into the state or their sale in the original packages by the importer. The Iowa attorney-general argued that the legislature had power to prohibit the importation and sale of cigarettes, but Judge Sanborn, following the decision of the Supreme Court, granted the writ, holding the Iowa law unconstitutional.

Railway—Employee—Negligence.

The New York Court of Appeals held, in the recent case of Graham vs. The Manhattan Railway Company, that a railroad company by inviting a person to take passage on its cars is bound to furnish him with a safe place to ride, and an omission to do so is evidence of negligence on its part; that disregard of the statute requiring the elevated railroad to place gates upon every passenger car and keep them closed while the car is in motion is evidence of negligence on the part of the company in an action to recover for an injury resulting from its failure to observe such a regulation, and that violent conduct of a servant of the company upon the platform of a car, causing the crowd to sway and jostle a passenger and thus contributing to an accident resulting in his injury, is negligence for which the company will be held responsible. The court said: "The stopping of the train at Fifty-ninth street was an invitation to the plaintiff to take passage thereon. There was also an express invitation by one of the defendant's employees. The defendant was, therefore, bound to furnish the plaintiff a safe place to ride. Proof of the omission to do so was evidence tending to show the defendant's negligence: Werle vs. Long Island Railroad Company, 98 N. Y. 650. Again, the defendant's disregard of the statute which required gates upon every passenger car used upon its elevated railroad, and that they should be kept closed while the car was in motion, was also evidence of its negligence: Knupfie vs. Knickerbocker Ice Company, 84 N. Y. 488; McRickard vs. Flint, 114 N. Y. 222, 226. Moreover, the action of the defendant's servant in so conducting himself as to cause the crowd upon the platform to sway and jostle the plaintiff to an extent that induced him to seize the rail to retain his position on the car, was also evidence tending to show negligence in the defendant. The exposure of a passenger to danger, which the exercise of a reasonable foresight would have anticipated and due care avoided, is negligence on the part of a carrier, and whether the overcrowding of cars is negligence is a question of fact."

BUSINESS NOTES.

The Scientific American.

The fiftieth anniversary number of the *Scientific American* is an exceedingly valuable issue of that always valuable periodical. All of its readers who have any interest in the history and statistics of invention will preserve it for future reference, for it is rich in this line of useful information. Among the subjects treated exhaustively in this number are the patent system of the United States, "The Transatlantic Steamship," "Railroads and Bridges," "The Textile Industries of the United States Since 1846," "Fifty Years of Photography," "The American Locomotive," the bicycle, electrical development, the sewing machine, agricultural machinery, "Naval and Coast Defense," the modern printing press, "Distinguished Inventors" and American shipbuilding. Besides these there are many articles less elaborately prepared, but of value and interest.

Bicycles in France.

The London *Times* says: "The Commissioners of Indirect Taxes have published an interesting return giving the number of bicycles in France. At the time of the exhibition of 1889 it was estimated that they numbered about 50,000, but it was not until 1892 that a tax was levied upon them, and there were then 119,000. The total went up to 132,000 in 1893, while at the end of last year the tax was paid upon nearly 160,000, this being at the rate of four for every 1,000 inhabitants. But the proportion is not, of course, uniform throughout France, and while in Corsica there are only seven bicycles for every 100,000 inhabitants, and only one for every 1,000 inhabitants in several of the mountainous departments, there are nearly 900 to every 100,000 inhabitants in two or three of the departments around Paris, in which there are about 25,000 bicycles. It is stated, too, that about one in 20 (or 8,000 in all) of the bicycles belong to women."

Portland Cement.

A series of comparative tests of Portland cement made by American, English, German, Belgian and Danish manufacturers, published by *Engineering News*, shows that no nation has a monopoly of the manufacture of good Portland cement; on the contrary, the reputable brands of cement appear to be of about the same quality in one country as in another. This is, after all, what should be expected. Portland cement is made from certain well-known constituents, and if those are combined in proper proportions and the process of manufacture is correctly conducted, the product should be about the same, no matter where the manufacture is carried on. There has been, and still is, a large amount of "superstition" concerning cement among engineers, and we even now hear it said that this or that or the other country is the only one that can produce "genuine" Portland cement. The diagrams published by our contemporary appear to show how little foundation there is for such statements, and "the fallacy of the still too common impression that American Portland cements are inferior to that of foreign countries."

Pacific Lumber Shipments.

The Minneapolis *Lumberman* says: "The press dispatches from the Pacific coast this week state that San Francisco is out for a big share of the tea traffic that is now monopolized by Tacoma, Seattle and Vancouver. The southern transcontinental roads want to get the tea business across the continent that is now being carried by the Northern Pacific, Great Northern and Canadian Pacific roads, and have made a cut rate to secure it. If this change in the routing of tea should be made, it will mean considerable to the lumber and shingle trade of the Puget Sound country. During the tea season, which is in August and early September, there is always a shortage of cars for lumber and shingle shipments, as the railroads cater to the tea trade. The Northern Pacific alone carried 1,500 cars of tea across the continent during the past twelve months. If the tea business is divided up among the southern roads, it will leave the Northern Pacific and Great Northern with more cars for lumber shippers. Already there is a murmur of an approaching car shortage for shingle shipments eastward, and as the tea traffic increases it will become more pronounced."

British Investments Here.

The London *Financial News* says: "In the report of the Scottish-American Mortgage Company, a very sound concern, which paid 12½ per cent. dividends for eleven years prior to 1894, the directors state that, owing to the difficulties between this country and the United States arising from the President's message in regard to the Venezuelan boundary, they thought it prudent to cease making new loans in December last. This led, of course, to an accumulation of unemployed funds for some months, and a consequent reduction in earnings, the dividend for the year ended May 31 being 10 per cent., as against 11¼ per cent. in 1894-95. No doubt many other companies which lend money on mortgage in the United States have acted in a similar manner, and a light is thus shed on the far-reaching effect which any disturbance of confidence has on the supply of capital available for North America. If the western farmers, who are crying out about the scarcity of money and the extortion of the eastern banks, could only realize that the effect of going on to a silver basis would stop the flow of foreign capital altogether for some time, they would not be so easily gulled by the interested utterances of the Silverites and their Populist allies."

Sumatra's Petroleum.

The island of Sumatra may, within the next five years, supplant the United States as Japan's source of supply for kerosene. What that means to this country can be inferred from the fact that last year Japan, according to the United States minister at Tokio, who has returned to San Francisco from Washington, imported about 30,000,000 gallons of oil from America. "Dr. Muir, who was for many years an oil refiner at Titusville, Pa., arrived in San Francisco yesterday with his family. A little over four years ago he established an oil refinery for a big Dutch company in the recently discovered oil fields, far in the interior of Sumatra. Since that time he has been constantly employed managing the refinery and perfecting the plant. He returned to America a few weeks ago to get his family, and is now on his way back to Sumatra, where he has orders to begin the construction of two more refineries, so extensive is the business becoming. Dr. Muir declared emphatically that in five years from now no petroleum would be shipped from the United States to Japan. He refused to say what the quality of the Sumatra oil is, but reiterated his assertion in regard to the future exports from this country to Japan."

Liverpool-Galveston Steamships.

A communication, dated May 2 last, has been received from Mr. Horace D. Nugent, Her Majesty's consul at Galveston, Tex., "reporting that, in consequence of the growing importance of that place as a port, owing to the successful system of jetties, whereby a channel of over twenty-three feet has been obtained direct to the sea, arrangements have recently been concluded for the calling there at regular intervals of the vessels of the Harrison Packet line. These vessels will leave Liverpool at intervals of one month, and, after touching at various South American and West Indian ports, will come to Galveston, and return hence with cargo and passengers to Liverpool. The first of the fleet has recently sailed, and will be followed at regular intervals by others. Negotiations are also pending for the visiting Galveston of vessels of the West Indian & Pacific, and of the Hamburg & American line, the former to run to Liverpool and the latter to Hamburg. Galveston has also been recently visited by agents on behalf of the White Star and North German Lloyd lines, with a view of examining its facilities as a port, and it seems probable that the vessels of one or more of these lines will before long run regularly to Galveston."

The Development of Formosa.

Mr. Hurst, the British consul at Tainan, in Southern Formosa, concludes his latest trade report by saying that the Japanese "are showing great energy in the development of the internal communications of the island, and during the five months that had passed at the date of the report in March since they landed, left more marks of their presence on the face of the country than their predecessors effected in as many decades. One of their first undertakings was the construction of a Décauville tramway of 20-inch gauge; they were prompted to make it, doubtless, by military considerations, and it has proved very useful for the purpose of forwarding supplies and war material from the ports to the inland districts. One line of this miniature railway runs from Auping southward via Tinan-fu to Takau, a distance of 35 miles; another runs from Tinan-fu north to Kagee, 50 miles distant, while a branch line connects Takau with the prefectural city of Hosan (Pithan), five miles distant. Surveys have been made for a line of rail between Takau and Auping. Scores of miles of good road have been constructed, so that the discomforts of traveling in Formosa bid fair soon to be things of the past."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Political uncertainty continues an unfavorable effect on trade, and dullness in industrial and commercial lines is of more than usual midsummer proportions. Mercantile credits are more closely scanned and in many instances shortened. Country merchants in northern Louisiana and southern Arkansas have canceled orders for fall delivery in some cases, owing to the effect on trade of the drouth there.

The industrial situation is less favorable. Among manufacturers of iron and steel it is regarded as serious in some lines, owing to the surprising falling off of demand. Production of pig is further curtailed, yet stocks increase. The outlook is for a further decline in iron and steel prices. Chicago offers of concessions on pig fail to bring bids for round lots. The steel pool met in New York yesterday in a last effort to prevent billet prices going off $2 a ton. Curtailment of production of cotton fabrics continues, yet fall purchases of prints are of small volume and fail to sustain quotations. Demand for boots and shoes also is smaller.

More complaint of the condition of trade is noticeable at Buffalo, where the outlook is not promising; at Baltimore, with a less favorable trade among jobbers, because country merchants have delayed purchases; at Minneapolis, because of similar action by country dealers; at Kansas City, where the trade in dry goods, shoes and clothing has fallen off and remains unsatisfactory, and at Detroit and at Charleston for similar reasons. Business has been restricted at Augusta and Louisville because of the long-continued intense heat, and at Chicago and St. Louis smaller orders and an unexpected depression prove the rule. Favorable advices are received from Omaha, where trade shows improvement because of recent rains, which have assured good crops throughout Nebraska, and from Galveston, where jobbers report improvement, due to the favorable crop outlook.

Bank clearings totals are registering a smaller volume of business, the total for the week being $811,000,000, nearly 18 per cent. less than last week, and 12 per cent. less than in the last week of July, 1895. Compared with the corresponding week in 1894, the week's clearings show a gain of nearly 6 per cent., but, as contrasted with the corresponding week in 1893, the falling off this week is 16 per cent., and as contrasted with the like week in 1892, 25 per cent. The seesaw of prices brings lower quotations for Indian corn, lard, coffee, print cloths, iron and steel, and a weaker wool market. Nominally unchanged quotations are reported for wheat-flour, pork, sugar, lumber and leather. Advances are reported for wheat, oats, cotton and refined petroleum. The total number of business failures throughout the United States this week is 294, as compared with 280 last week. The increase as contrasted with the corresponding total in 1895 is 73, or an average of 10 more each day during the week. As compared with the last week of July, 1894, this week's increase is 74. There have been almost twice as many business failures this week as in the corresponding week of 1892.

Stock values at New York are higher, and speculation is more bullish, though its activity is professional. Demoralization and liquidation have been checked by the restoration of the Treasury gold reserve and the arrangements of banking interests to avert gold exports. The formal opening of the sound money campaign also causes a reassertion of confidence. Early in the week the bears were able to depress prices on the absence of public speculative interest and buying support. Covering by professional operators is the feature of the rally, with renewed bullish manipulation in Sugar stock. London's action has been influenced by the conclusion of a fortnightly account showing a large bull interest in Americans, and some liquidation resulted. Foreign exchange is held firm by the banking syndicate at 4.89. Large manufacturing and importing interests are said to be acting in concert with the bankers' combination.

Exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal this week amount to 2,648,000 bushels, as compared with 3,073,000 bushels last week, 1,460,000 bushels in the week one year ago, 2,977,000 bushels in the week two years ago, and with 5,622,000 bushels three years ago.

General trade throughout the Canadian Dominion remains quiet, even dull. The exception is at Halifax, where business is fair in wholesale lines. Toronto merchants report the usual midsummer dullness and expect a revival early in the fall. Jobbers at Montreal are less confident as to an early revival in business, and report country orders smaller than in the like period of 1895. Cotton and woolen mills throughout the Dominion are running on short time, yet stocks are accumulating. Shoe manufacturers at Quebec city report few orders ahead. There are 37 business failures reported from the Canadian Dominion this week, 6 more than last week, 13 more than in the corresponding week last year, and only 6 more than in the like week of 1894. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $17,252,000, compared with $20,550,000 last week, and $17,532,000 in the concluding week of July, 1895.

FINANCIAL.

The Money Market.

Apart from the activity shown in time money, there is little in the New York loan market for the past week to indicate that anything unusual has been in progress. The steps by which the banks and bankers have restored the gold reserve and checked specie exports have, however, caused a much quieter feeling to assert itself, and the disappearance of demoralization in the stock market was also effectual in the same connection. Call money has been abundant at 1½ @ 2½ per cent., and there is little doing in commercial paper. The supply of acceptable names is small, and rates are on the basis of 5½@6½ per cent. for doubles. The inquiry for time loans comes from Stock Exchange and other borrowers, whose principal object is to be secure beyond the November election. There is a good deal of variation as to rates and forms of notes, while collateral receives a severe degree of scrutiny. Open efforts to secure gold from the Treasury for hoarding have apparently ceased, or are confined to individual instances, involving small amounts. Rumors have been heard that premiums ranging from ¼ to ⅝ per cent. are offered for Assay Office checks and "free gold" in other forms. Leading bullion dealers and money brokers discourage such operations, though the London press is discussing the possibility of a gold premium here and the shipment of gold from that side. The chief actual manifestation of this kind here is in connection with time loans and the preference shown for gold notes in such transactions. Nominal quotations are 5@6 per cent. according to date and other circumstances.

The New York Banks.

The statement of bank averages made public last Saturday showed much larger changes in the leading items than there had been any reason to expect. The principal difference of this kind was in deposits, which decreased over $12,600,000, the loans showing a reduction of $5,300,000. The decrease of over $6,000,000 in specie was, of course, attributable to payments into the Treasury on account of the recent arrangement between the banks and the government. On the other hand, the loss in legal tenders was only $329,000. The heavy gold exports of last week, and the fact that the transfer of specie from the banks to the Treasury in exchange for legal tenders did not count in the averages until the close of the week, would partially explain the discrepancies in the statement. The figures of the statement compare as follows with those of the preceding week:

	July 18, '96.	July 25, '96.	Changes.
Loans	$479,540,900	$474,239,900	Dec. $5,301,000
Specie	62,333,400	56,231,300	Dec. 6,102,100
Legal tenders	85,937,400	85,607,800	Dec. 329,600
Deposits	505,991,100	493,358,200	Dec. 12,632,900
Circulation	14,599,400	14,676,700	Inc. 77,300
Total reserve	148,270,800	141,839,100	Dec. 6,431,700
Reserve required	126,497,775	129,339,550	Dec. 3,158,225
Surplus reserve	21,773,025	18,499,550	Dec. 6,273,475

At the corresponding period last year the surplus reserve was $41,996,575, against $71,903,725 in 1894.

The Boston Banks.

	July 25, '96.	July 18, '96.	Changes.
Loans	$162,542,000	$162,642,000	Dec. $100,000
Circulation	9,957,000	9,937,000	Inc. 20,000

Foreign Exchange.

The syndicate, details in regard to which are given in another column, has apparently assumed complete control of the foreign exchange market. As also stated, it would seem that some of the largest buyers of exchange are taking part in the arrangement. At any rate, the exchange market has been very dull, with an extremely light inquiry. Rates, however, have been firmly maintained by concerted action, demand sterling being held at 4.88¾ early in the week, but advanced to 4.89 firm before its close, and posted quotations were marked up on Thursday ½c.—to 4.88@4.89½. It seems to be the recognized policy of the syndicate to obtain full rates for all the exchange it is to sell under the agreement, and in this way offer a discouragement to remitting or buying bills in lieu of gold hoarding.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

July 25.	July 27.	July 28.	July 29.	July 30.	July 31.

4.87¾	4.87¾	4.87¾	4.87¾	4.88	4.88

Closing quotations on Friday for other classes of bills were: Cables, 4.89¼; commercial bills, 4.87½ @ 4.87¾; francs, 5.16¼ @ 5.14⅜; reichsmarks, 95⅜ @ 95⅞.

The Bank of England discount rate is unchanged at 2 per cent. The bank this week lost £370,000 specie, and its proportion of reserve is 59.38 per cent., against 59.46 per cent. last week. In the London open market call money has been ¼ @ ½

per cent. and discount 5/8 @ 9/16 per cent. Money rates have advanced at the continental cities. The feature this week was the success of the Russian loan for 1,000,000,000 francs offered in Paris by the Rothschilds. It is said to have been oversubscribed twenty-five times, but this is considered an exaggeration.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending July 24, 1896:

	1896.	1895.
Dry goods	$2,241,696	$3,338,628
General merchandise	5,054,421	6,635,154
Totals for the week	$7,296,117	$9,973,782
Previously reported	268,991,152	290,206,761
Since January 1	$276,287,269	$300,180,543

The exports (exclusive of specie) from New York to foreign ports for the week ending July 28 were $951,631 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$5,693,706	$6,311,003
Previously reported	215,213,510	191,747,016
Since January 1	$221,197,216	$198,058,019

Silver.

The market this week has been featureless, with scarcely any change in quotations. Trading in bullion certificates here amounted for the week to 230,000 ounces at from 68¾c. up to 69¼c.

THE STOCK MARKETS.

The New York Stock Market.

While low records were made in the prices of many stocks early this week, and while the subsequent rallies have been moderate, a change has occurred in the temper of speculation on the New York Stock Exchange. The declines were not accompanied by demoralization, and the fear of a panic, so prevalent in the preceding fortnight, has disappeared. In fact, the depressions were more the work of manipulative operators working on the bear side than the result of liquidation. Lack of any public interest whatever in current speculation, however, gave opportunity for such maneuvering, and though London, as will be noted later, seems inclined to buy, there is no other outside support, and the market has been and continues a purely professional one, so far as its quality is concerned.

The change of feeling which the street has displayed is, however, more important than any slight improvement in the quotations. It is due to the energetic and successful steps taken by the banks and bankers here and elsewhere to restore the Treasury gold reserve and to put a check upon gold exports. In both respects the financial interests engaged in the work have been completely successful. The total gold supplied by the banks here and in Boston, Philadelphia and Chicago to the Treasury in exchange for greenbacks foots up over $20,000,000, and the gold reserve now stands at $110,000,000, and will be increased as soon as the work of counting and weighing the specie is completed. Equally important is the formal banding together of the foreign banking and exchange interests, details of which are given in another column. The further alleged fact that large importing interests are also in sympathy with the arrangement may have an important effect. At any rate, the control of the combination over the exchange market is evidently complete. No gold shipments are in prospect, and exchange rates are held steady at figures sufficiently high to discourage European remittances or purchases of sterling for the purpose of hoarding. These steps have served to dispel exaggerated symptoms of alarm in regard to the Treasury and the possibility of a bond issue in the face of the silver agitation. At the same time the beginning of active campaign work by the advocates of the sound money cause has relieved the financial community from the impression that the inflationists were in complete possession of the field, and arrested the growth of probably erroneous impressions that the silver cause was developing unexpected strength in all portions of the country.

London's part in this week's stock market has been a peculiar one. The favorable effects of the arrangements for protecting our Treasury were partly nullified by the fact that the fortnightly settlement there, which began on Tuesday, disclosed a very large bull account in the American market. It was mainly speculative, and, under existing circumstances, the conservatism of London's moneyed interests made the "carry over" troublesome, if not dangerous. No serious difficulties transpired, but some liquidation of weak accounts were enforced, making London a seller in this market on Tuesday and Wednesday. It subsequently purchased, but its transactions here for the week are about equally divided.

The inactivity of the investment bond market and the unwillingness of investors to do anything even in the best class of municipal obligations has been referred to before. Startling evidence of this condition was afforded by the practical failure of the 3½ bond issues offered by the cities of New York and Brooklyn, to which attention is elsewhere directed. These incidents were made use of as bear arguments by operators on that side of the account, though a better understanding of the circumstances and recognition of the futility of pushing offers of that nature on an unwilling market have modified the unfavorable impressions they originally created.

Crop prospects, though, on the whole, excellent, have received scant attention, and the street is not particularly impressed with the outlook for railroad earnings, in view of the shrinkage of mercantile business and consequent falling off of traffic. The features of the actual market have been mainly the stocks which are the favorites of speculative and professional manipulation, notably Sugar, which, after declining from 105⅞ to par on Wednesday, was rallied sharply by Friday 105⅝. The latter movement was assisted by a marking up in the price of the refined product. The extent of the early declines may be measured by the fact that Chicago Gas fell to 49¾, St. Paul to 66⅝, Burlington to 62¼ and Tennessee Coal to 15⅝. On the recovering St. Paul rose to 68⅞, Burlington to 65¼, and Rock Island, which touched 53 on Wednesday, closed at 56.

Boston Stock Market.

The market has shown more weakness, and active stocks generally close lower. Atchison has ruled quiet and closes 1¼ points lower, with Chicago, Burlington & Quincy active, but down 3¼ points. Boston & Montana loses 2 points, and General Electric is 2⅛ points lower. Bell loses 3 points for the week, while Sugar is active and off 2¼ points. Bay State Gas has held steady, with a fair trade, while United States Leather preferred closes 2⅝ points lower.

Prices of principal shares, with volume of transactions, have been as follows:

TRADE FEATURES.

RESTRICTED PURCHASES AND CREDITS

FAIR CROP PROSPECTS.

(Special to BRADSTREET'S.)

Larger Eastern Cities.

Boston, July 31.—In all kinds of merchandise trade is slow, with an absence of any life noticeable. The political uncertainty is sufficient to force a general drawing in of operations, and the demand is of a slow, hand-to-mouth character. The money market is quiet, but the tendency is yet towards firmer rates on all loans other than quick calls. Time money is generally held at 6 per cent., although the range is as low as 5 per cent., while the best commercial paper is quoted at 6 per cent. Money is in good supply, but the disposition to keep strong is very marked. The boot and shoe trade continues quiet, although the factories are generally busy making up previous orders. Leather is quiet, but the price is below the cost of production, and values are firm. Hides have shown some weakness, but are yet above the parity of leather in price.

Philadelphia, July 31.—Wool is waiting and hoping for better things. Dry goods are very quiet. Demand for boots and shoes has fallen off. Leather is somewhat depressed. In all lines purchases are made only to meet actual needs. The usual summer dullness is this year intensified.

Pittsburgh, July 31.—General business here remains quiet. In the dry goods and boot and shoe lines some orders are being received for future delivery, but the fall trade generally has not opened up as yet to any extent. Collections are reported unsatisfactory, and merchants are showing a disposition to curtail orders until they have fully paid up their accounts. The raw iron market has not been as dull for three years as during July. Several furnaces have been shut down since last week, and it is predicted many more will close. The trade generally do not look for much improvement until after the November elections.

Buffalo, July 31.—Jobbers in dry goods report their travelers doing fairly well, but there is no visible improvement in general trade, and the business situation is regarded as decidedly unpromising. The slump in the market and recent developments regarding the situation of several large western concerns has created a decidedly uneasy feeling.

Baltimore, July 31.—Jobbers report salesmen sending in orders in fairly satisfactory quantities, but there appears to be a tendency to delay larger purchases until the political situation is more definitely settled. Collections seasonable.

West and Northwest.

Cleveland, July 31.—General wholesale trade continues quiet, with no material change looked for until after midsummer. The iron and iron-ore markets are lifeless and freight interests very unsatisfactory.

Cincinnati, July 31.—Business is without essential change.

Detroit, July 31.—The movement of staples continues light. Trade is through mail orders principally. Collections are poor and prospects for fall business unsatisfactory.

Chicago, July 31.—There is no improvement in general trade, and the situation is the same as a week ago in dry goods and collateral lines. In light and heavy hardware, business is confined to filling small orders, and prices are well maintained. Orders for steel billets and rods are scarce, and the Joliet Steel Works, which run largely on them, has been closed, owing to the lack of orders, and 3,500 hands are thrown out of work. There are small orders being received for steel rails, and manufacturers here have enough on their books to run until November. At present they are being rushed to get rails out, as railroad people demand prompt deliveries. Buyers of pig iron are scarce, and the few who have been in the market during the week refused to name prices at which they would take large lots. Holders have offered to make concessions without bringing out counter bids. Produce is slow and prices low. Wool receipts, 3,138,088 pounds.

Louisville, July 31.—Trade in general merchandise is quiet. The intense heat of the past few days seriously interferes with all kinds of business.

St. Louis, July 31.—There is but little activity in any line, although a seasonable business is being done in leading staples. The dullness continues of more than the usual midsummer proportion, orders being small and almost altogether for immediate use. A betterment is not looked for until the political horizon clears. Even the hardware business, which has been satisfactory all along, shows signs of dullness. Leather is bought in a small way only. Hides are weaker and buyers scarce. The wool market is quiet and much neglected. Receipts and shipments of lumber are small, with lower values. In both banking and trade circles credits are closer looked into, short time accommodations having the decided preference. Collections are unsatisfactory.

Kansas City, July 31.—Jobbers of dry goods, boots and shoes, clothing and hardware are having very unsatisfactory orders for immediate and future delivery, with average collections. Retail dealers report fair business. Live stock receipts are liberal, with low values.

Sioux Falls, July 31.—Trade is slow, both with wholesale and retail houses. All dealers are more conservative. Collections are fair.

Milwaukee, July 31.—There appears to be no improvement in the condition of general business throughout this section, and, with some exception in staples, reports indicate inactivity in the movement of merchandise. Collections, in the main, are slow and unsatisfactory.

Minneapolis, July 31.—Some lines report an inclination on part of country merchants to postpone placing full orders for fall goods, though it does not seem to be by any means general. Staples are in good demand; lumber is quiet and flour more active than last week.

St. Paul, July 31.—There are no prominent trade features this week, dry goods being the only line showing an improvement, that in other lines remaining unchanged. The falling off in collections noted always shows itself as the end of the month approaches.

Duluth, July 31.—There are no new trade features. Collections are reported fairly satisfactory, and the volume of business is about same as last week.

Omaha, July 31.—Good rains during the past week have assured abundant crops, and trade in all lines shows improvement. Collections are improving.

Southern Cities.

Charleston, July 31.—Wholesalers in fall lines complain of a drop off in business. Retail trade is about the same. Collections are very poor.

Savannah, July 31.—Trade for the week is fair. Collections are good for the last of the month as compared with this time last year. Both trade and collections are heavier. Naval stores receipts are about the same as last week. Shipments are lighter, tone firm and prices very low.

Atlanta, July 31.—No material change is noted in the state of trade.

Augusta, July 31.—No change is noted in the condition of business. Retail trade is very dull, owing largely to the extremely hot weather of the past two weeks. The cotton crop is large and in good condition.

Jacksonville, July 31.—There is no change in general trade.

Birmingham, July 31.—Hot weather prevails. Business is lagging, collections are slow, and merchants do not appear to be buying.

Chattanooga, July 31.—Trade is quiet. Iron prices have dropped.

Nashville, July 31.—The movement of merchandise is small in volume. Country collections continue favorable for the season. The stock market is dull and money largely in excess of demand. There is some little demand for a gold clause among street lenders, but no such requirement among banks.

Memphis, July 31.—General trade and collections are only fair.

New Orleans, July 31.—General trade is about the average for the season, but some cancellations are reported on account of the drouth affecting crops in north Louisiana and south Arkansas. Cotton is moderately active. Sugar is dull and rice quiet. The new crop is beginning to move. Money is in good demand for crop purposes.

Galveston, July 31.—Jobbers in all lines report an improvement in trade, and with the excellent crop outlook feel hopeful.

Pacific Coast.

San Francisco, July 31.—Wheat threshing is now in progress, and returns are favorable both as to quality and quantity. Rates on flour to China have been increased from three to six Mexican dollars per ton. The price of sugar declined ¼c. Collections are slow.

Portland, July 31.—The salmon run in the Columbia river is not up to expectations, and the pack will, in all probability, be short. The wool market is very flat, lumber is quiet, and wholesale trade in

general shows no improvement. Collections are a little better.

Seattle, July 31.—General trade is holding up well for the season, though groceries are somewhat quiet. A steamer left for Central American ports with general cargo valued at $35,000. The first steamer on the new Japanese line leaves here September 5.

Tacoma, July 31.—Oriental traffic seems encouraging, with two ships out of the port this month and freight lett over. Three China steamers will arrive in August. Flour shipments are increasing and rates have been greatly advanced. The eastern Washington harvest is well on, and latest reports claim heavier crop than last year, partly due to greater acreage. Local business is very dull.

Canada.

Toronto, July 31.—Business is quiet in wholesale circles. This is the usual midsummer dullness, but prospects generally are considered fair. Wheat is firmer. In the Niagara section the yield of winter wheat is small. Payments are fair.

Montreal, July 31.—Trade continues dull, without any immediate prospects for revival. Country orders, although as numerous as last year, are smaller. City retailers complain of very light sales. Cotton and woolen mills are running on short time, orders are scarce, and stocks are not accumulating. Quebec city reports shoe manufacturers having no orders ahead. Crops throughout the province promise a good yield.

Halifax, July 31.—There has been a fair amount of activity in wholesale trade during the week, and a large influx of visitors has considerably stimulated retail orders. Collections are fair.

Wool.

The demand is very small, and the tone of the market is generally easy. Prices are held about the same, as a rule, but, in the absence of trade, quotations are entirely nominal. Stocks at the seaboard are excessive, and many commission houses are refusing to increase their obligations by accepting additional consignments on the present dull market. The wool will not sell, and there is no use piling up more stocks until it begins to be wanted. Western holders are easier in their views and more anxious to get their wools consigned, even, in some instances, if no advances are made. Manufacturers will not buy wool until they sell their goods, hence the market is a waiting one. Foreign wools are held firm by the strong position in Europe, but sales rule slow. Importers feel that they cannot be replaced at the market, and will only sell at full prices. About 290,000 pounds of foreign wool was sent to Europe from Boston the past week.

Dry Goods.

The general market continues very quiet, without life in any department. The curtailment in the production of cotton fabrics continues, but while this tends to prevent stocks from accumulating, it does not increase demand. Raw cotton has shown more steadiness, but the present price of goods is not much affected by that. Printed fabrics for fall have been generally opened and some are being sold, but it does not take much to meet buyers' present needs. Ginghams are dull and featureless. Dress woolens are slow with agents, and mill orders are small. Jobbers report best call for blacks in mohair effects and plain mohairs, but purchases are slow. In men's-wear woolens business drags. Agents have samples for light weights ready to show, but only some of the cheaper lines have attracted attention as yet.

Bushels of Indian Corn Exported.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only for four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2	3,965,731	3,142,578	3,196,400	3,008,020	5,321,500
Jan. 9	3,471,681	2,587,178	2,409,850	3,308,907	4,183,121
Jan. 16	3,202,124	3,564,459	3,332,050	3,637,687	4,522,219

BRITISH MINERAL OUTPUT FOR 1895.

The London *Times* says: "The Home Office has now issued the annual returns of the output of minerals in the United Kingdom. The output of coal in 1895 was 189,661,362 tons, which exceeds by 1,383,837 tons the output of 1894—the highest previous record. Including ironstone and fireclay the total recorded output of minerals in 1895 under the Coal Mines act was 201,738,351 tons, which is 2,287,000 tons more than in the previous year. The number of mines at work in 1895 was 3,512 as compared with 3,419, while the number of hands employed in the mines under the Coal Mines act fell to 700,284 from 705,240. The fall of prices, with the relatively high wages paid and the irregularity of employment, caused the year to be a conspicuously bad one for both employers and employed. In some districts the average week's work per man employed throughout the year was not more than four to four and one-half days. Then, again, the older mines have had to contend with the competition of new pits, of which 93 were opened during the year. As a general rule new mines can produce, for a year or two at least, cheaper coal than mines where the workings are a mile or two from the bottom of the shaft. The most important developments have taken place in South Wales, but almost equally remarkable advances have been made in Durham and Northumberland and in Scotland. It is probable that the selling price of coal in 1895 was nearly sixpence per ton less than in the previous year, which means a sum of £4,500,000. There is no industry that suffers to-day to a larger extent from overproduction and ruinous competition.

"The returns under the Quarries act show that quarrying is one of our largest industries, a fact of which direct evidence is now afforded for the first time. The number of quarries at work in the kingdom in 1895 was 8,062, and the quantity of minerals produced—mostly stone—was 29,813,734 tons. The total number of hands employed was 104,623. Besides these there were 33,373 persons employed under the Metaliferous Mines act, so that the total number employed in and about our mines and quarries last year was 838,282."

THE MILLS TO THE COTTON.

The Baltimore *Manufacturers' Record* says: "About two years ago the *Manufacturers' Record* announced that half a dozen leading New England mill companies would shortly begin an investigation, with a view to building large cotton mills in the south. This was generally criticised by New England papers, which denied that the mills of that section would build in the south. Since then the Dwight Mill has been built at Gadsden at a cost of $500,000, the Massachusetts Mill at Rome at $600,000, the Whittier Mill at Atlanta, with 10,000 spindles, with the intention of eventually making 40,000; contracts have been signed for a $250,000 mill, to be located at Anniston, Ala., to be increased in the future to $500,000, by the American Net and Twine Company, of Boston, and to-day we give particulars of the commencement of work on a $600,000 mill in Alabama, to be built by New England people. Here is an aggregate of about $2,500,000 capital invested in these mills. Half a dozen or more other companies are now studying the situation, and will build as soon as business resumes its natural conditions. The building of these mills by the oldest and strongest mill companies in New England has had a very marked effect upon New England's sentiment regarding cotton manufacturing in the south. The start has been made, and prosperous times will see a very rapid movement in that direction. With a satisfactory settlement of the currency question business will quickly revive, and then the southward trend of New England money will steadily increase."

MAINTAINING BITUMINOUS COAL RATES.

An important meeting of officers of the railroad companies that do a bituminous coal trade was held at the office of the Pennsylvania Railroad Company in this city Monday. The Philadelphia *Press* says: "This meeting was the first that the bituminous coal roads have had for a long time, and it was called by the Pennsylvania Railroad Company. For some time past there have been a number of small irregularities in the transportation of this coal, and while there was a disposition to maintain rates and prices the actions of some of the railroads have created considerable uneasiness. At first it was thought that it would be best to submit the matter to arbitration, but it was later decided to get the presidents of the roads together and try to bring order out of chaos.

"The presidents present were George B. Roberts, of the Pennsylvania Railroad Company; John K. Cowen, president and receiver, and Oscar G. Murray, receiver of the Baltimore & Ohio; M. E. Ingalls, of the Chesapeake & Ohio; Chauncey M. Depew, of the New York Central, which owns the Beech Creek Railroad, and F. J. Kimball, receiver and president of the Norfolk & Western. Besides these each official had representatives with him, the Pennsylvania having First Vice-President Thomson, Second Vice-President Green and General Coal Sales Agent Searles. The meeting lasted for some time, and at its conclusion it was agreed to bury all differences and continue to maintain rates.

"The bituminous coal trade has been in a bad condition for some time past, but notwithstanding the fact there has been little demand for this variety of coal, the coal companies have maintained prices, and very little cutting has been indulged in. The coal operators in the early part of the year formed an association for their own protection, and it included all the operators in the soft coal districts of Pennsylvania, Virginia, West Virginia and Maryland. When this association was completed coal prices were advanced, and for a time everything was harmonious. Early in the spring the usual custom of making contracts for the ensuing year was begun. The railroad companies of the New England states have heretofore been large purchasers of bituminous coal, but when they received the bids from operators who were members of the association they refused to entertain them and threatened to purchase the coal from Nova Scotia if the prices were not reduced.

"This action of the New England roads created considerable agitation among the coal men, and for a time it looked as if there would be a break, but the matter was taken in hand by the stronger members and the bids were not changed. The eastern roads were firm in their decision, and up to the present time have not given any large orders for bituminous coal. The consequence of this has been that there is a vast amount of soft coal mined and stored at the various yards of the different companies."

THE "WORLD PROSPEROUS EXCEPT THE UNITED STATES."

In his weekly letter, under date of July 8, the English correspondent of the *American Manufacturer*, speaking of the export trade of Great Britain in iron and steel for the first half of 1896, gives the following facts. It should be remembered that a large part of Great Britain's production of iron and steel is exported, and that an increase in the exports of these articles means that the world, which deals with Great Britain, is prospering and increasing its purchases. The correspondent says:

The exports of all forms of iron and steel to all countries from Great Britain for the six months were 1,672,220 tons, compared with 1,286,581 tons last year, an increase of 29 per cent., and the value was £11,586,354, compared with £8,994,321, or an improvement of 28 per cent. In the various departments there is a pretty general rise in June values compared with a year ago, both for the month and for the six months, pig and puddled iron having improved 5 per cent. and 23 per cent. for these periods respectively; bars and angles, 33 per cent.; railroad, 106 and 108 per cent.; wire, 14 per cent. and 22 per cent.; cast and wrought, 65 and 32 per cent.; hoops and sheets, 42 and 78; old iron, 80 and 89; unwrought steel, 23 and 45, and galvanized sheets 66 and 50. Telegraphic wire has decreased 80 per cent. on the month, but has improved 51 per cent. on the six months. Tinplates have improved in value fractionally on the month, but on the six months they have decreased 26 per cent. The quantity sent to the United States for June was 11,753 tons, against 13,760 tons for June, 1895, and 17,247 tons for June, 1894. The value of the hardware and cutlery exports sent to the United States in June this year was £13,424, against £14,503 last year and £6,917 in 1894. The June value of machinery and mill work sent to the United States was £47,622, compared with £44,488 a year ago. The value of the pig iron shipments to the States for June was £3,203 compared with £2,174 a year ago. In ordinary years our exports of all kinds to the United States may be estimated at about 30,000,000 sterling, and though this total is small relatively to the trade we were accustomed to do with the States before the McKinley tariff, it is still much in excess of our exports to any other foreign country. It will be easily understood that while our greatest foreign market continues depressed, British trade, however healthy or active, cannot possibly attain its full development. The quietude on your side is, indeed, reflected unmistakably in both our metaliferous and textile exports during the half year. Our Australasian colonies, apparently, are recovering their buying power, as shown more particularly in their augmented imports of hardware, machinery, galvanized sheets and other iron, and recent events in South Africa do not appear to have had any deleterious effects upon our valuable trade with that part of the world. Our exports of galvanized sheets show an increase of over 37,000 tons, and about 500,000 sterling for the first half of the year. The increase in our shipments of unwrought steel, about 40,000 tons, or £378,000, is not less noteworthy, the most conspicuous advances being with Russia, Germany and India.

The *American Manufacturer* adds: "The letter is written by one of the most careful, intelligent and accurate of English journalists, who has been connected with English trade journalism for more than twenty years. The facts he names are worthy of the most careful study. English export trade in iron and steel, he tells us, has increased in the first six months of 1896 as compared with the first six months of 1895 29 per cent. in amount and 28 per cent. in value. But the increase in values in the several items included in iron and steel is still more remarkable; bars 33 per cent, wire 22 per cent., railroad iron and steel 108 per cent., hoops and sheets 78 per cent.

"In the midst of this increase in quantities and values the trade with the United States is stationary, or even less. There are conditions under which this fact would be a source of congratulation; for example, in good times it would indicate that we were supplying our own markets, but the above figures indicate that while all the world is increasing its purchases, depression rules in the United States. That while Australia, Russia, Germany and even India are buying more freely, we cannot buy.

"What is the cause of this reduced purchasing power of this country which these figures indicate? It is one fact, and only one fact, a question as to the future growing out of the free silver agitation. Men will not buy, will not invest in new enterprises, with this feeling of insincerity; with the avowed belief on the part of many of the intelligent, honest free silver men that the first effect of a free silver victory will be a panic, with idle money in immense quantities anxious for safe investment, with bountiful crops to men, with important developments to be made, with all of the usual conditions of prosperity we are passing through a period of unusual depression, simply because there is this free silver agitation, because one great party has approved of repudiation and attacked the United States Supreme Court, which is our last resort against dishonest and ample legislation. With a triumph of sound money this fall there will be an instant revival; with the triumph of free silver such a period of suffering and depression as this country has never dreamed of. We have confidence that the good sense and honesty of the country will assert itself and sound money will triumph."

THE WORLD'S SUPPLY OF COAL.

The following is taken from *Cassier's Magazine*: "In 1780, about the time the steam engine was invented, the consumption of coal in Great Britain was some 6,500,000 gross tons a year. It has arisen to 27,000,000 tons in 1816; to 50,875,000 tons in 1850; to 84,042,698 tons in 1860; to 112,875,525 tons in 1870; to 146,969,469 tons in 1880; to 181,614,288 tons in 1890 and to 188,277,525 gross tons (210,870,828 net tons) in 1894. The result of the discussions on the subject of the duration of the coal supply of Great Britain was the conclusion that if the output increases in the same ratio as it has for twenty or thirty years, the coal will be exhausted in a little over a century. These estimates are now regarded as excessive, as it is conceded that there is in each nation a limit to industrial development, which, without considering the great economies in the use of fuel, will also limit the expansion of coal production. Mr. Gruener places this limit for England to 250,000,000 tons, which supposes a mining population of 1,000,000 miners and a working population of 5,000,000.

"In the United States the production of coal has been increasing in a much greater ratio than in Great Britain. We cannot go back to the eighteenth century and give figures of production of coal, nor is that necessary in order to indicate how enormous has been the increase in its production and consumption in the United States. At the tenth census, 1880, the production of coal in the United States is reported at 71,481,570 net tons; at the eleventh census, 1889, it had risen to 141,229,513 net tons, nearly double, and in 1893, according to the report of Mr. E. W. Parker, of the United States Geological Survey, it was 182,352,774 net tons, an increase of more than two and one-half times in thirteen years, doubling about every five years.

"Similar increases could be shown for the other great coal-producing countries, as Belgium, Germany, Austria, France and Russia. The world's demands for heat and power are increasing marvelously, while the world's supply of coal is a definite quantity, and it is an evident proposition that with the exhaustion of its coal not only will the power and influence of a nation decline, but even its existence may be imperiled."

OUR UNEXPLORED GLOBE.

The New York *Literary Digest* says: "We are apt to think that we moderns have very little to do in the way of exploring the globe, and that the recent explorations in Africa have quite put the finishing touch to geographical knowledge, so that he who wishes to set foot on virgin soil must sigh, like Alexander, for another world. Those who entertain such opinions may calm themselves with the thought that no less a portion of the earth's surface than 20,000,000 square miles is yet a fit subject for investigation, and on a large part of this the foot o civilized man has not yet trod. We translate from 'Cosmos' (Paris, June 6) an article that brings this fact out very clearly. It runs as follows:

"'At the London Geographical Congress Mr. Logan Lobley gave a very interesting study of the present state of exploration of the globe. It appears that modern geographers have an immense amount of labor before them to make us acquainted with all parts of the earth. This conclusion will astonish some people, for there is a general impression that almost all regions of the earth are well explored.

"'Mr. Lobley reminds us that, in the first place, toward the middle of the sixteenth century, all seas had been traversed by navigators, and that if the maps of the continents were not yet very exact, at least their relative positions and their general configuration were known. Australia itself appears on a French map of 1542 under the name of Great Java. In the course of the sixty years included in the last decade of the fifteenth century and the first half of the sixteenth, a pleiad of navigators had advanced geographic knowledge in a degree that has never been reached in any other period so short. Sebastian d'Elano had made his first voyage around the world; Vasco da Gama had doubled the Cape of Good Hope; Christopher Columbus had added the two Americas to the map; the voyages of Cabot, of Magellan, had completed this wonderful list of new discoveries.

"'To-day, outside of the polar regions, we must confess that all the seas have been explored, but this is far from being the case with the land. An immense extent is entirely unknown to us; another, still more considerable, has been only imperfectly explored; travelers have traversed it, commerce has exploited some of its products, but good maps of it do not exist. Finally, only the least part is well known; geodesy has covered it with a network of triangles, and the maps of it are complete even from a topographical standpoint.

"'After the Arctic and Antarctic regions, which have remained inaccessible up to the present time, Africa is the part of the world that is least known to us, notwithstanding the admirable explorations made in this century, which are daily clearing up the map. The earliest explorers, however, could not dream of serious efforts, and many years will pass before the country will be thoroughly explored.

"'After Africa, Australia offers the vastest field to the investigation of explorers; we must remember that even its seacoast was not fully explored till 1843. Since that time, at the price of great suffering, it has been crossed from south to north, but no traveler has yet traversed it from east to west.

"'In the two Americas, except the extreme northern and southern parts, the continent is known; nevertheless, the whole central region of South America, though in great part explored for commercial purposes (for mines, wood, caoutchouc, etc.), is not exactly mapped.

"'To sum up, the yet unexplored parts of the globe cover an area of about 50,000,000 square kilometers (about 20,000,000 square miles), approximately divided thus:

	Square miles.
Africa	6,500,000
Australia	2,000,000
America	2,000,000
Asia	200,000
Islands	400,000
Arctic regions	3,600,000
Antarctic regions	5,300,000
Total	20,000,000

"'Opportunity will not be wanting here for a long time, to the explorers who wish to undertake their part of the immense task that must be achieved by humanity before it knows its own world.'"

CO-OPERATIVE CONGRESS.

As a result of the deliberations of the first convention of the National Coöperative Congress at St. Louis, a new organization has been formed. The St. Louis *Globe-Democrat* states: "It has been christened the American Coöperative Union, and its officers are as follows: President, Alonzo Wardall, of Kansas; vice-president, Sheridan Webster, of St. Louis; secretary, Mrs. Imogene C. Fales, of New York; treasurer, C. K. Demoree, of Missouri; directors, N. O. Nelson, of Missouri; James Rhodes, of Massachusetts; Rev. Ralph Albertson, of North Carolina; O. Cravath, of Nebraska; C. B. Hoffman, of Kansas; M. W. Wilkens, of California; A. S. Edwards, of Tennessee; Henry D. Lloyd, of Illinois; R. A. Southworth, of Colorado; J. M. Moore, of California; Rev. H. M. Cassin, of Massachusetts; Rev. N. W. Lermonde, of Maine; Helen S. Johnson, of Pennsylvania; B. O. Flowers, of Massachusetts, and Miss Julia Cadwell, of Colorado.

"Yesterday's (July 25) sessions were held in Entertainment Hall of the Exposition building, it being thought that the attendance would be much larger than on the opening day. The failure of the Populist convention to adjourn, however, kept many from being present, as those mostly interested in the movement are delegates to the convention. Consequently the promoters of coöperation were disappointed in respect to the size of their audience.

"Mr. N. O. Nelson, of this city, opened the proceedings by delivering an address of welcome. After extending the hospitality of the city to the visitors, he spoke briefly on the merits of coöperation. 'The real work of coöperation,' he said, 'lies in small beginnings, in small business enterprises conducted on coöperative principles. There are plenty of recorded experiences to refer to, and the history of coöperative success is an open book, yet men are slow to follow methods that are in successful operation elsewhere.'

"Chairman Wardall appointed a committee to prepare a plan for a national federation of all coöperative concerns, consisting of the following: A. S. Edwards, Tennessee; O. Cravath, Nebraska; Mrs. Elizabeth M. Wardall, Kansas; R. A. Southworth, Colorado; A. E. Gage, Illinois; N. O. Nelson, Missouri; Mrs. Imogene Fales, New York; John Marshall, Kansas; Mrs. Helen S. Johnson, Pennsylvania, and T. S. McBride, Illinois.

"While the committee was at work Alonzo Wardall made an interesting address on the 'Aims and Objects of the Congress.' He was followed by Mrs. Imogene C. Fales, who discussed the topic 'Why Coöperate?' Mrs. Fales treated on various phases of the subject, and endeavored to convince her hearers that coöperation would result in the raising up of the middle and lower classes of mankind intellectually, morally and financially. Her remarks were well received, and when she had concluded Miss Julia Cadwell rendered several vocal solos.

"Sheridan Webster, of this city, was on the programme to make an address on the 'Labor Exchange.' He was unable to be present, so Thomas C. P. Myers, of Milwaukee, Wis., discussed the subject in his stead, explaining at length the nature and motives of the movement. Andrew H. Baker, of Durand, Ill., and Fred Liscomb, of Pierce City, Mo., also spoke on the same subject.

"At the afternoon session addresses were made by A. S. Edwards, of Tennessee, and Helen S. Johnson, of Pennsylvania. The former's subject was 'Coöperative Colonies,' and the latter's paper was entitled 'Domestic Coöperation.' Both papers were highly entertaining.

"It was late in the day when the federation committee reported. It recommended articles of federation providing for one central governing body, consisting of a president, vice-president, secretary, treasurer, a board of directors and an executive committee, to consist of five members appointed by the board. The report provides that each state is to have its coöperative institutions federated in state organizations, and the latter to be federated in the Union. The objects of the American Coöperative Union are the advancement of the educational, social and business welfare of its members.

"The principal address of Saturday evening was delivered by Prof. Thaddeus B. Wakeman, of New York, on 'The Coöperative Commonwealth.' Other addresses on coöperative topics were made by C. B. Hoffman, of Kansas; Helen S. Johnson, of Pennsylvania; A. S. Edwards, of Tennessee; Prof. Ruth B. Ridges, of Ohio, and Alonzo Wardall, of Kansas. Miss Cadwell sang several songs, and, altogether, the entertainment was a very enjoyable one."

BRITISH INDUSTRIAL SITUATION.

The Labor Department of the English Board of Trade reports that 109 trade unions, with a membership of 422,602, 13,605, or 3.2 per cent. were unemployed at the end of the month. This compares with 3.3 per cent. in May and 5.6 per cent. in May, 1895, from which it appears that English labor is better employed than it was a year ago. The report goes on to say that the number of new trade disputes in June was 95, involving about 11,000 workpeople, as compared with 135, involving about 41,000 workpeople, in May, and 65, involving about 9,000 workpeople, in June, 1895; 22 disputes took place in the textile trades, 20 in the engineering and shipbuilding trades, 18 in the building trades, 11 in the mining and quarrying industries, 6 each in the clothing and metal trades, 4 in connection with dock, etc., labor, and 8 in miscellaneous trades. Of the 83 disputes old and new, involving about 16,300 workpeople, of which the settlement has been reported, 46, involving about 4,850 persons, terminated in favor of the workpeople; 23, involving 8,732 persons, in favor of the employers, and 14, involving 2,715 persons, in a compromise. About 43,000 workpeople were affected by the changes in rates of wages reported during June, about 40,000 receiving increases and 3,000 sustaining decreases. The estimated effect of all the changes was an average advance of about 1s. 2d. per week in the wages of the total number affected. About 5,000 iron and steel workers, 18,000 workpeople in the engineering and shipbuilding industries, and over 9,000 workmen in other branches of the metal trades secured increases. About 4,000 building operatives also obtained advances. The principal decrease affected 1,980 blast furnacemen in the northwest of England.

CANAL CARRIERS' COMPLAINT.

The Erie Canal carriers have made the following appeal to the New York Produce Exchange for relief from grain elevator extortions and railroad discriminations against the state grain traffic at Buffalo and New York:

"To the Board of Managers, Produce Exchange, New York City:

"Gentlemen—The boat-owners and navigators engaged in the business of transporting grain by the Erie Canal from Buffalo to New York, whose business is identical and inseparable from yours, beg leave to state that it is utterly impossible for us to successfully compete with the railroads centering here for the bulk of the vast grain traffic coming by lake to this port.

"The reasons for our inability to successfully cope with the railroads for the carrying trade to and from the metropolis comes from the fact that the roads own or control not only the mammoth propeller lines upon the great lakes, but operate the grain-elevating and terminal facilities at Buffalo

as well as at Philadelphia, Baltimore, Newport News, Norfolk and New Orleans. This being the fact of the case, the railroad magnates, in order to illegitimately divert trade away from the people's canal route and away from the metropolis to their own ports, have placed what, in effect, is an export tariff for transferring canal grain at Buffalo, a power which alone rests with Congress. At the same time, rail grain is transferred here at the actual cost of the service performed. And as you are aware the Brooklyn grain elevator and wharf trust is ably assisting the diversion of the grain traffic from New York by elevator and storage extortions to competing ports. The result of such unjust methods on the part of the railroad and the wharf trust has been the accumulation of nearly four hundred canal boats at this port; or nearly half of the entire diminished canal fleet is here to-day unable to obtain cargoes at the low rate of 3¾c. a bushel on wheat, 3½c. a bushel on corn and 2⅜c. a bushel on oats to New York, out of which we, the canal carriers, must pay trimming, tugging, insurance on cargo and scalpage here, Hudson river towing, wharfage and trimming cargo at New York; also we must make good the shortage in cargo.

"After these deductions it leaves us about 2½c. a bushel net on wheat to run and man our boats. If we are lucky, we will obtain a west-bound cargo to Buffalo at 45c. gross ton free in and out. If we cannot secure an up-freight we are compelled to come to Buffalo light, so that in all consistency we are down to hard-pan rates all around. On the other hand, the charge for tranferring grain direct from lake vessel to canal boats at Buffalo is $1\frac{3}{10}$c. a bushel, and for like service at New York it is $1\frac{5}{10}$c. a bushel, or at both ports the extortion amounts to $2\frac{8}{10}$c. a bushel, or a clean gouge at both ports of plump 2c. a bushel, that is, against canal grain; if the grain is stored on its way to the world's markets, the extortion doubles up in short order. Contrast this robbery with the next-to-nothing terminal charges at the railroad docks of New York's fierce competitors, and who can wonder that the trade that legitimately belongs to New York is, like water, seeking the lowest level, not to say anything about the full cent a bushel differential railroad rate against your port. The result on this gigantic railroad conspiracy against New York and New York's canal is to keep boats here in idleness from fifteen to twenty days, waiting for cargoes, while at the same time competing railroads are flooded with grain. It may be truthfully stated that about all the grain and other freights that the canal and New York gets is that portion which slops over the railroad grain elevator dams, as aforesaid.

"Therefore, in view of the deplorable canal situation, we unitedly call upon your powerful commercial body to use your utmost endeavors in securing the lowest schedule of grain elevator and terminal charges at the ports of Buffalo and New York that we, the partners of the state in the transportation business, may again be able to restore to you the bulk of the grain traffic coming here within the borders of this state. In other words, please endeavor to make our great Erie Canal free in fact as in name only. Also, please bear in mind this fact, that grain is the easiest and cheapest commodity of all land products to handle when not done under trust methods, which increase the charge many fold over a reasonable compensation for the service rendered."

IMPORT DUTIES ON GRAIN.

The *American Agriculturist* says: "The high wall of protection is strongly maintained in many importing countries which otherwise could absorb a much larger quantity of our surplus crops. The United Kingdom, Holland, Belgium and Denmark admit grain and flour duty free, and the rate is very small in few less important countries which buy sparingly. France and Italy impose a duty of about 37c. per bushel on wheat, and relatively high rates on flour and other cereals; Germany demands 32c. on every bushel of wheat and 30c. on rye, while the duty in Spain and Portugal is nearly or quite prohibitive. In the following table the statement of duty imposed is in cents per bushel of grain and barrel of flour. Under the present United States law foreign grain, excepting barley, pays a duty of only 20 per cent. ad valorem. The old law provided for specific duties of 10c. to 30c. per bushel, or much higher than the present rate:

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, AUGUST 8, 1896.

So far as can be gleaned from surface indications, the movement in favor of the nomination of a third ticket by the gold-standard Democrats appears to be growing in favor. A gathering of committeemen representing members of the party who will not support the Chicago platform is now in session at Indianapolis. This gathering, it is expected, will adopt a vigorous declaration against the Chicago platform and ticket, and its composition, made up as it is of representatives of over six-sevenths of the states of the Union, will emphasize the widespread character of the revolt against the Chicago ticket. Of the committeemen in attendance it is expected that about five-sixths will declare for a third ticket, while the remainder will be opposed to such action. The suggestion has been made in some quarters that while the gold-standard Democrats in all the states should meet in convention in all the states and adopt platforms repudiating that adopted at Chicago, they should make the nomination of electors in the several states dependent on existing conditions in each, so that where a third ticket would do good in insuring the defeat of Bryan it should be nominated, but that when conditions point to another result no electoral ticket should be nominated.

Maine is one of the comparatively few states in which the election for state officers is held in advance of the election day generally observed throughout the Union, and it is a state in which the conditions are particularly favorable for a forecast as to the outcome of the electoral struggle in November. It is worthy of special note, therefore, that the Democratic state convention, which was held in Waterville on Thursday, resulted in a practical division of the party in the state. A free-silver candidate for governor was nominated by the convention, and the passage by the convention of a resolution indorsing the Chicago platform was followed by the withdrawal of the gold-standard Democrats. The bolting delegates adopted an address to the people of the state, in which they declare that the free coinage of silver at 16 to 1 means the substitution of silver now worth about 50 cents on the dollar for existing money, which would result in an advance of about 100 per cent. on the prices of commodities, but means no advance on the wages of labor, but, on the contrary, a loss of about one-half of the purchasing power of wages, pensions, savings bank deposits of widows and orphans, insurance policies and similar instruments, hard times at home, and disgrace before the world. The platform, continues the address, does not express the belief of the great Democracy of the United States, and an appeal is made to Democratic citizens to unite in a determined effort to save the party from the threatened betrayal of its trust.

Speaker Reed was renominated for Congress this week, and responded in a speech in which he dealt with the issue uppermost in the minds of the public. Referring to the history of the attempts to maintain a system of bimetallism in the United States, Mr. Reed said that we never were able, when there was a difference of 2 or 3 per cent., to keep the one metal alongside the other. It was always either gold or silver, never both, and he asked if the United States could not lift a silver dollar that was worth only two cents less than the gold dollar, can it now lift a 50-cent dollar to the height of a hundred cents, and if we could, why should we want to do it? Suppose, he said, you have got a house. Is it worth any more, is it any different house whether it is worth two thousand silver half dollars or one thousand gold whole dollars; and if you want to count your house at more dollars, why not cut the gold dollar in two and measure it by gold? As to the changes in the price of farm products, wheat or cotton, or any other, they happen, Mr. Reed said, from a thousand things outside of the measure of gold or silver, and added: "Credit plays a great part in this silver question. If your merchants buy goods from England, you'll find that credit amounts to a great deal, and on a silver basis we will pay a big sum for this credit. That's why the merchant does not want a silver basis. They say on a silver basis you'll scale down your debt one-half. Would you do it, and deprive the man you owe of one-half of what you owe him? Shall the nation do it? I say no; and not from sentiment do I make this statement, but from a selfish reason. We must preserve our credit in the world, and if we adopt a silver basis we'll ruin it the world over. We want no silver basis to help us out of these hard times, because the silver basis is dishonorable."

There went into operation at the port of New York this week a system of harbor transfers from steamers direct to railway lines of mail matter received from Europe properly pouched to be transferred without going through the New York post office. About one-third of the mail matter so received was thus handled. The experiment resulted in making a difference of two and a half hours in the mail for Philadelphia, getting it over in time to be delivered by one of the new midday letter carriers' trips rather than after office hours. The mail reached Buffalo six hours earlier than it formerly did on the regular run, the mail being delivered by the first letter carriers' trip in the morning rather than by the one at midday. Similar gains were accomplished for all the large cities, and the Mexican mail will reach the city of Mexico twenty-four hours earlier than formerly. This latter is of importance on account of the fact that our postal service handles nearly the entire European mail for the Mexican people. Altogether the post office authorities are well satisfied with the success of the experiment.

Prices of certain common articles of produce in Mexico are given in a communication by Consul-General Crittenden, just made public. Among the prices given by him the following will attract attention, viz.: Ham, uncured, from $3 to $3.25 an arroba of twenty-five pounds; ham, cured, from 50 to 60 cents a pound; breakfast bacon, 50 cents a pound; beef, not choice parts, 10 cents a pound; beef, choice parts, from 15 to 20 cents a pound; mutton, from 10 to 15 cents per pound, and wheat, from $9 to $10 a caraga—300 pounds; corn has ranged from $7.50 to $8 a caraga—300 pounds. The consul says he thinks corn has risen in price to $9 a caraga, and, as the crop is quite short in many parts of Mexico, the price will continue to rise unless the government removes the tax and admits it free. Suffering is apprehended in some parts of Mexico in consequence of the failure of the usual rains. Rye and oats are not raised in Mexico to any extent; sugar, refined, is quoted at 8 cents per pound. Some of the prices above given are remarkably high. They are in Mexican currency with the exchange at from $1.85 to $1.90; that is, $1 of the United States gold, silver or paper equals $1.85 or $1.90 in Mexican silver or paper. The bulk of imported articles are high, and the cost of transportation, duties, commissions and exchange enter into the high prices as a rule.

An International Socialistic Congress has been in session in London recently. A considerable part of the time of the congress was taken up in disputes regarding the admission of certain classes of delegates, considerable objection being felt to the admission of anarchists, who finally withdrew. The congress adopted resolutions declaring that the only solution of the land question lay in socialism. The congress also adopted the report of the committee on education and physical development, favoring a government system of public education extending from the kindergarten to the university, and including physical, scientific, artistic and technical subjects to be genuinely accessible to every one by freedom from fees and public maintenance of the scholars. The report advocated prohibiting the employment of children under eighteen years of age in night work, or in any work involving labor extending over twenty-four hours weekly. Before adjourning the congress decided that the next meeting would be held in Germany in 1899, and that anarchists would not be admitted. One of the American delegates said that the congress established the necessity of a united movement by the economic and political forces of labor. It had also virtually given notice to the old-fashioned English trades-unionists who supported the Liberals and Tories that they could not be recognized by the international labor movement unless they dropped their old ideas.

Some information regarding the opportunities of the American manufacturer in the German market is given in a report just received at the State Department from United States Consular Agent Carpenter at Furth, Bavaria. In his district, it appears, the leading manufacturing interest is that of mirror plates, of which over a million dollars' worth are annually exported to the United States. These sales are effected through the personal efforts of the manufacturers themselves, who go often to the United States, and ride the country over from New York to San Francisco and from St. Paul to New Orleans. The consul says the Germans unquestionably admit the superiority of American manufactures and workmanship, and they pattern after them whenever possible. They have American dentists, stoves made after the American plan, which they call American stoves, American fashion plates in their tailor shops, and many of the toys are made after American samples. The word American attached to anything is intended to convey the idea of superiority, and yet exceedingly few American goods are sold there, simply for the reason that no effective effort is made to introduce them.

ONE OF OUR FARMER FRIENDS OF SILVER.

The following letter from a farmer friend of silver explains in part one point of view as to the proper standard of value:

To the Editor of BRADSTREET'S:

SIR—I am sixty-two years old, a farmer and retired lawyer. The trouble with the times is just as apparent to most men as to say two and two make four. Let me illustrate. I have 315 acres of good land, which cost me over $20,000. I sell a bunch of hogs, say, and they bring me 3¼c., and by the time I have paid my taxes, grocery bill and other necessaries I have not a dollar left to go to general store with and buy a decent suit of good woolen clothes. I consequently put up with some cheap shoddy suit, which I can buy for nearly nothing. The consequence is the merchant cannot send orders to the jobbers, nor the jobber to the manufacturers, and, presto, business declines.

A schoolboy could readily tell you that were Congress to unconditionally repeal one thousand Sherman laws and authorize the issue of ten billion dollars' worth of gold bonds when the world has only $3,600,000,000 of gold, it would not give me one single dollar which I could apply to the purchase of a coat. Nor would the merchant be thereby enabled to add one more dollar to his order to the jobber, nor the jobber one to the manufacturer. And the farmer is the broad basis upon which all must rest.

Failures increase notwithstanding pig iron and cotton (were) are advancing, but wheat is falling, and the farmer has to sell it for whatever the pig iron or cotton man will give, eh?

The agony of it is we have no money, and get none, and you are helping kill the goose that lays the golden egg if you do not try to get in touch with those who will have to pay bills either in cash or repudiation. You say:

"Produce markets tend downward." Certainly. "Corn is a shade lower and both pork and lard are "off."

These are farm products, and of course they go lower, and every time a gold bond is sold they go lower and lower still.

We have been led a long ways, but we are about to cry halt. If you will only get in touch with the farmers you will know much more of what is necessary for the good of this great republic. MC.

Blankville, Iowa.

The cause of the decline of business advanced in the first paragraph of the letter overlooks too much. The American wheat farmer has been struggling with silver-standard, wheat-producing India, and, until recently, Russia, and with Argentina and Australia, where almost limitless, cheap, virgin soils are tilled in opposition to higher-priced land in the United States. Further than this, he finds the whole country, himself included, suffering from a decline in prices in all lines, the outcome, in part, of overproduction—excessive competition, if one chooses—but due, as much as anything else, to business disturbance, to restricted demand, and, consequently, smaller outputs, because of enforced excessive coinage of silver prior to the repeal of the compulsory purchase feature of the Sherman law in 1893, to the tendency to spoil the quality of the financial cream in the pan by the injection of so much silver water. Investors at home and abroad prefer not to place loans when the outlook or the prospect favors repayment in money of a lower standard of value. A result was withdrawal of loans, and the outcome, naturally, a restricted volume of business in industrial and commercial lines, and in transportation circles. Credits were naturally scrutinized, often challenged, and, in many instances, turned down. The panic of 1893 followed. The compulsory purchase clause of the Sherman act was repealed, but the shock from widespread panic requires more than a few months to overcome. But when, in addition to panic and the necessary depression following it, excessive cereal and other agricultural production throughout the world is aided by a misguided but widespread and sincere demand for a change from a gold to a silver money standard, there is little opportunity for improvement in business. This is what has hurt our Iowa correspondent and thousands of others equally sincere but mistaken. It is not easy to understand how the free coinage of silver, at the ratio of 16 to 1, could put more money honestly in the hands of anyone unless he earned it, borrowed it, or had it given to him. If one may presume, therefore, that under proposed free coinage of silver a billion more dollars of silver were coined, how could it be distributed? Is there anyone to-day entitled to money, either in payment for merchandise or services, or able to furnish good collateral for a legitimate business loan, who cannot get it?

It is true, the repeal of the Sherman law did not furnish any of our farmer friends with "one single dollar" which he "could apply to the purchase of a coat." But its continuance, even more so the inauguration of free silver at 16 to 1, would so derange business as to intensify the strain they complain of. It would make it worse for them because no such change of monetary standard could be made without resulting in a worse business derangement than that we have just gone through. Are they prepared for this?

Further withdrawals of or refusals to make investments would mean restricted opportunity for business, for work, as well as restricted purchasing power—hence lower prices But even after a further and long drawn out business strain, struggle and disaster, consequent on free silver coinage, if there should ultimately come an advance in prices, particularly for wheat, the purchase of that particular coat to which reference has been made would be more difficult than ever. A $10 suit would be much higher with 53c. silver dollars as the standard of value, as would hats and shoes, and horses and harrows, and reapers and everything else. The farmer might, indeed, pay off a mortgage in the 53c. dollar on the basis of 100 cents each. But waiving the dishonesty of such an act he would be compelled to sell his wheat and other crops for 53c. dollars. If he finds fault with the returns for his labor in 100-cent dollars, what would be the charm about a dollar worth less?

The sole beneficiaries of free silver at a ratio of 16 to 1 will be domestic and foreign miners of gold, and foreign bankers who may buy silver bullion in anticipation of free silver here, in order to present it at our mints for coinage—these same foreign bankers whom florid free silver orators are fond of denouncing for insisting on the gold standard.

THE BANKING COMBINATION AND THE TREASURY.

Whatever symptons of disturbance the money and stock markets have exhibited this week, they were not the result of misgivings as to the Treasury gold reserve or of fears that specie would be exported to Europe. The part the speculative troubles in Chicago have played in creating a firmer feeling in this and other money markets of the country is referred to in another part of this issue, while the declining tendency that has been shown in stock values has been the result of unsettled feelings regarding the political outlook, combined with vigorous bearish manipulation of a market ready to respond to such attacks.

The fact that the position of the Treasury has not been called in question even in the slightest degree, under these circumstances, is the highest tribute to the efficiency of the steps taken by the banks and bankers of the principal financial centers to help the situation. The Treasury gold reserve has, under the plan set on foot by the principal New York banks, and in the execution of which those of other cities joined, been raised to $110,000,000. In fact, on August 1 the amount of free gold held by the Treasury amounted to $110,782,000, and the total of specie contributed by the banks and exchanged for legal tenders has been over $18,000,000. The amount of gold held in the Treasury has, it is true, diminished slightly, and at the close of the week its total is $110,000,000. A few belated deposits by banks have been made, but, on the other hand, some withdrawals of gold have occurred for Canadian account, about $550,000 gold in all having been transferred during the week from New York to Montreal. It would also seem that some scattered instances of the withdrawal of gold from the various Sub-Treasuries have occurred by interests which were not reassured by the vigorous action of the leading banks and bankers of the country in regard to the matter. Such cases are, however, very few, and, considering the danger of a run on the Treasury, which existed little more than a fortnight back, the renewed confidence which is shown is little less than surprising.

Nor have the steps taken by the foreign bankers to act in concert and prevent gold exports at a time when their consequences would be of the most serious character been any less successful and noteworthy. Apart from the Canadian demand for gold referred to above, there have been no exports of specie from this country through banking channels during the week, and every day has added to the evidence that the combination of international banking houses has obtained a complete control of the foreign exchange market and proposes to exercise it for the protection of the government gold reserve. The details of this arrangement on the part of the bankers were referred to in last week's issue of this journal. No formal announcements whatever have been made as to the methods to be pursued, though the fact that exchange rates have ruled high this week, demand sterling selling up to 4.89@4.89¼, shows that the managers of the pool are selling their drawings at the best figures that can be obtained without the danger of gold shipments. The belief that large importing interests are acting in harmony with the pool is confirmed by the extremely limited character of the inquiry for exchange, which has shrunk to abnormally small proportions. In short, from this standpoint, the money market and the Treasury alike seem to be receiving all the assistance that skill and financial weight could afford them.

CIRCULATION IN VARIOUS COUNTRIES.

One of the most interesting statistical tables contained in the lately issued Treasury Department circular, to which reference was made last week, has reference to the money in circulation in the different countries of the world. Taking the circulation per capita as furnishing the best basis for comparison, we find that France leads all the other nations of the world as regards the total circulation per capita, being credited with $35.77 per head of population. It also leads all the other nations as regards the circulation of gold and silver, with the exception of Australia, which has a larger gold circulation. The second place as regards the per capita circulation of money of all kinds is held by Belgium, which, on January 1, 1895, the date for all the countries other than the United States, had a per capita circulation of $27.82. Australia held third place with a total per capita circulation of $25.96, of which all but $1.49, in silver, was gold, there being no paper circulation. The Netherlands held fourth place with a per capita circulation of $24.25, Portugal came fifth with a per capita circulation of $23.11, the United States following with $22.55 (July 1, 1896), and then the United Kingdom with $20.78.

Among the states having less than $20 and more than $10 per capita, the first place was held by Egypt, which had a per capita circulation of $19.85, of which all but $2.20, in silver, consisted of gold, there being no paper circulation. Next came Germany with $17.59 per capita, the South American states with $17.22, Spain with $16.55, Greece with $11.09, Denmark with $11.00, Cuba with $10.83, Italy with $10.79, Austria-Hungary with $10.67, Roumania with $10.50, Hayti with $10.10 and Canada with $10.00. Of the states having the smallest circulation the lowest place was held by Bulgaria, which had a per capita circulation of only $1.76. A little above Bulgaria stood China, which had a per capita circulation of $2.08. Next above stood Sweden with $3.10, the Straits Settlements with $3.26, India with $3.33, the Central American states with $3.66, Servia with $3.78, Japan with $4.00, Turkey with $4.09, Mexico with $4.95, Norway with $6.55, Russia with $8.46 and Switzerland with $9.97.

As has been already pointed out, Australia leads in the volume of gold circulation per capita with $24.47, France being second with $22.19, Egypt third with $17.65, the United Kingdom fourth with $14.91, Germany fifth with $12.21, Cuba sixth with $10.00, Belgium seventh with $8.73, and the United States eighth with $8.41. In the amount of silver circulation per capita France leads with $12.94, the Netherlands being second with $11.96, Spain third with $9.49, the United States fourth with $8.77, Belgium fifth with $8.71 and Switzerland sixth with $5.00. In the volume of paper circulation per capita the South American states stood first with $15.28, Portugal second with $10.80, Belgium third with $10.38, Greece fourth with $10.18, Italy fifth with $6.24, the Netherlands sixth with $6.08, Canada seventh with $6.04, and the United States eighth with $5.37.

CHICAGO'S SPECULATIVE COLLAPSE.

This week's speculative sensation was the complete collapse of a local inflation at Chicago. Involving, as it did, the closing of the Stock Exchange of that city for an indefinite period, the effects on a disturbed and apprehensive situation were at first rather serious in their tendencies. These first impressions have, however, been modified, in view of the fact that the losses, serious as they are, fall upon one particular interest, so that no real disturbance of general business is likely, while the prompt steps taken by the Chicago Stock Exchange itself, by the banks of that city, and by the largest local capitalists, to arrange the troubles in some way have aided in suppressing undue excitement. The incident, occurring at a time like the present, is, no doubt, unfortunate, but an examination of the circumstances would

tend to create the impression that the speculation itself was one which under any circumstances would have probably broken, and that its promoters depended for success upon the development of a train of future events which made their position prëeminently unsafe.

The local stock market at Chicago has for some months past been the scene of an exaggerated speculation, in which the shares of the Diamond Match Company and the New York Biscuit Company have been the principal, if not the sole, features. Both concerns were controlled by the Messrs. William H. and J. H. Moore, two Chicagoans of large means. The concerns in question are profitable and successful ventures. The Diamond Match Company owns factories and other properties in various states, and its capital stock, which was increased under the management of the Moores from $7,500,000 in 1889 to $11,000,000 last year, has paid dividends of from 10 per cent. to 12 per cent. per annum. The New York Biscuit Company paid good dividends for several years, but made no returns to its shareholders in 1894 or 1895, though it resumed them in April of the current year with a dividend of 1½ per cent. The principal difficulty, indeed, seems to arise from the speculations of the Moores in the Diamond Match stock, and it should be noted that so far nothing has occurred to controvert the assertions of all interested that both companies are in successful operation, and are in no way affected by the circumstances that have overtaken the leading individuals in their management.

About the beginning of the present year Diamond Match stock was quoted on the Chicago Stock Exchange at around 120@125. Early in February last an upward movement began; by April it had touched 200, and on May 4 the stock touched the top figure of 248. This movement was accompanied by reports that profitable contracts were being closed for the sale to the French, Austrian and other European governments, which maintain a match monopoly, of the company's patent rights to certain improved machinery and processes, and the names of the largest match manufacturers in Great Britain were also mentioned in the same connection. It is to be noted, however, that a rival corporation, the Continental Match Company (in which Mr. Edwin Gould, a son of the late Jay Gould, is the leading capitalist), has not only entered into active competition with the Diamond Company here, but has also been opposing its efforts to secure the adoption of its machinery in Europe, with the result that, up to this date, the negotiations abroad have reached no conclusion.

This week's developments reveal a fact that might have been suspected from the extreme advance of the Diamond Company's stock in such a narrow market as the Chicago Stock Exchange affords. The speculation, in short, was conducted almost entirely by the Messrs. Moore. By judicious manipulation, aided by the circulation of the reports referred to in the preceding paragraph, they were able to mark the quotations up to a dizzy height. Needless to say, there was considerable speculation of a general character in the stock. But though the Messrs. Moore, in all probability, held to the belief that the consummation of contracts with the European governments would carry the stock to 300 or over, the delay and the general financial situation, combined with the inevitable tendency of outside holders to secure such tempting profits, resulted in an unloading process. It is this tide which the Moore Brothers endeavored to stem. In doing so they were forced to increase their holdings until they seem to have acquired more than a majority of the entire capital stock, a great deal of it having been taken at high prices and carried on margins, either through loans by the local banks and capitalists, or through a trust agreement with the stockholders who sold out. To do this in a falling market, such as has lately been seen, is a manifest impossibility, and it would also appear that the banks and other lenders were not willing to make advances on the security of Diamond Match stock at more than 150 to 170. The decline, though gradual, was, nevertheless, severe. The monthly settlement on August 1 on the Chicago Stock Exchange developed difficulties and very high rates for carrying the security to the next account, and on Monday last Diamond Match was quoted in the neighborhood of 120.

The ability of the speculators to put up more margin having been exhausted, the end came, and at a meeting on Monday evening of the leading bank officials and Stock Exchange representatives the steps already related in regard to the closing of the Chicago Stock Exchange, and so forth, were resolved on. This was the easier in the case of the Stock Exchange, since nearly all its transactions for some months past were confined to Diamond Match and New York Biscuit stocks, and the termination of the August 1 settlement three days before had left very little new business open, although some confusion has been created by the fact that local operators had used the facilities for dealing both for cash and for the account, and there are many thirty and sixty-day contracts outstanding. It would seem that the interest of New York and other outside financial centers in the speculation was slight, and that though local brokers were in some instances involved, the main loss falls upon the Messrs. Moore, who are, according to current accounts, involved to the extent of some $7,000,000.

The speculation in New York Biscuit stock followed closely upon the lines of that in Diamond Match. The upward movement in that stock was from 30 to 108, and was supported by rumors of favorable trade combinations. Its rise was from 30 to over par, and in this case, too, the Messrs. Moore are believed to have purchased a majority of the shares and to be carrying the same on margins, while the banks would lend no more than 60 upon it.

The subsequent developments have taken the form of the appointment of committees by the banks and capitalists and by the Stock Exchange, which have the matter under advisement. Various suggestions have been made, among them the creation of a syndicate to take over the Moores' holdings on the basis of the figures at which loans were made on it, and thus secure a gradual liquidation.

FINANCES OF THE GREATER NEW YORK.

Several more installments of the proposed charter of the Greater New York have been submitted by the draft committee of the commission. Of the new provisions perhaps the most important have relation to the funding of the debt of the municipality. The section specially dealing with this subject provides for the eventual funding of the city debt in interminable bonds, or bonds for the payment of which, except as to the payment of interest, no definite period is fixed. It would, according to the view of the committee, relieve the city, if adopted, of the imperative necessity of raising from $5,000,000 to $8,000,000 annually by taxation to swell its sinking fund. It has no model, unless it be in the character of British consols, and is regarded as particularly applicable to municipal debts in New York, because of the section of the constitution of the state which renders it impossible for any city to create a debt in amount exceeding 10 per cent. of the assessed valuation of its real estate. Under this constitutional provision, it is contended, there can be no sound reason why a city should be compelled to pay off any portion of its debt within fixed periods of time.

Mr. De Witt, in his letter transmitting the provision to the press, says: "Liquidation of debt by a city is made use of only for the purpose of creating new and further debt. The taxpayer pays off an outstanding obligation to the end merely that another obligation shall take its place. It may be, therefore, much wiser to permit the city voluntarily to raise annually only so much toward the payment of its debt as may be in keeping with the financial condition of the time or needful to an economical conduct of its finances. Arbitrary sinking funds were, of course, indispensable before the adoption of the constitutional amendment to which I have alluded, since it is quite apparent that when a large volume of bonds are to fall due at a given date, preparation to meet them must be made in annual installments in anticipation of their maturity; but with interminable bonds, never in whole to exceed 10 per cent. of the value of the real estate of the city, there could be no reason why sinking funds should not be voluntarily instead of arbitrarily collected from the taxpayer." He adds that the longer a bond has to run the higher is the price it would bring; that these bonds will run forever, and that the city could only redeem them by purchase in the market.

The machinery by which the financial operations of the new municipality are to be carried has at its head a comptroller, whose duties include, among other things, the settlement of claims upon the city. He is given power to appoint, "and, for cause to be stated in writing and published in the *City Record*," remove a deputy comptroller. The deputy may be authorized by the comptroller, at the latter's pleasure, to fill his place at times for periods limited to three months. Five bureaus for the department are also named, respectively, for the collection of rent and similar revenues, for the collection of taxes, for the collection of assessments and taxes, rents, etc., in arrears; to audit accounts in which the city is concerned, and to receive payments. A financial statement must be annually published by the comptroller. Provisions are also made in this department for the dedication of certain lands for markets.

A chamberlain is to be appointed in the same manner as are heads of departments, to hold his office four years, and must give a bond in the sum of $500,000. He is to receive all moneys paid into the city treasury, and his accounts must be examined by the commissioner of accounts. The chamberlain must exhibit a statement of the balance in the treasury to the municipal assembly at its first meeting in the month, after his entrance upon his office. He must also make a report to the comptroller regarding the state tax collections on the first day of every month. He must provide for the execution of the state inspection laws by payments to the commissioners of emigration out of duty moneys on alien passengers. His fees are also specified, and his duties in regard to money paid into court are the same as those of the present county treasurer. A majority vote of the chamberlain, comptroller and mayor decides upon the banks in which public money is to be deposited.

Provision is made for the continuance in substance of the sinking fund system. It is provided that the board of commissioners of the sinking fund will consist of the mayor, chamberlain, comptroller, president of the council and chairman of the finance committee of the board of aldermen. They are to have powers and duties similar to those vested in the present commissioners. The redemption sinking fund is to be continued. Any alteration of rates affecting the revenues of the sinking fund is prohibited, and the sinking fund is not allowed to be alienated or impaired. The commissioners are allowed to lease wharf property, to call in bonded debt, and upon the application of the department of education to sell at public auction lands reserved for educational purposes. Other provisions in regard to the sinking fund are specified, covering nine sections in all.

CONDITION OF THE TREASURY.

The Treasury accounts issued on August 1 cover only a period of a month, the fiscal year having begun on July 1. The receipts for the month of July amounted to $29,029,209.33, which represents an increase of over $1,200,000 as compared with the preceding month, but a nominal decrease as compared with the corresponding month of last year. The receipts from customs amounted to $12,157,330.70, which represents a decrease of over $1,900,000 as compared with the corresponding month of last year, while the internal revenue receipts amounted to $14,302,532.15, an increase of over $1,400,000 as compared with the like month of 1895. Miscellaneous receipts amounted to $2,569,346.48, an increase of over $475,000 as compared with the month of July last year.

The expenditures for the month amounted to $42,088,468.05, which represents an increase of over $16,600,000 as compared with the preceding month and of $3,500,000 as compared with July, 1895. The principal item of increase was in civil and miscellaneous expenditure, amounting to nearly $2,300,000. Expenditures on account of the navy showed an increase of over $1,300,000; those on account of the Indians showed an increase of over $270,000, and those for pensions showed an increase of over $345,000. Expenditures on account of the War Department showed a falling off of a little over $150,000, and those on account of interest showed a decrease of over $597,000. As will be seen by comparing the statistics of receipts and expenditures, the latter showed an excess over the former for the month of over $13,000,000, whereas for the corresponding month last year the excess of expenditures amounted to less than $9,500,000.

The aggregate interest and non-interest-bearing debt amounted at the end of July to $1,222,312,984, which represents a net decrease of $416,366 for the month. The certificates and Treasury notes offset by an equal amount of cash in the Treasury amounted to $555,212,973, an increase of

$8,102,000 for the month. The aggregate of debt, including certificates and Treasury notes, amounted to $1,777,525,957. The gold coin and bars in the Treasury were valued at $150,012,224, an increase of nearly $6,000,000 for the month. The cash balance in the Treasury at the close of the month, including the gold reserve, amounted to $256,158,472.40, which represents a decrease of $11,273,624.30.

SMALLEST WORLD'S WHEAT STOCKS SINCE 1892.

Notwithstanding the relatively rapid rate of reduction of stocks of wheat at home and abroad in late months, the falling off in July fell rather below expectations.

Totals of stocks of wheat available, both coasts of the United States, together with those in Canada, on August 1, as reported to BRADSTREET'S, are contrasted with those on like dates in preceding years as follows:

	East Rockies.	*Pacific coast.*	*Totals.*
August 1, 1896	58,414,000	1,917,000	60,331,000
August 1, 1895	46,767,000	6,850,000	53,617,000
August 1, 1894	66,311,000	8,579,000	74,890,000
August 1, 1893	68,689,000	4,437,000	73,126,000
August 1, 1892	31,310,000	2,770,000	34,080,000
August 1, 1891	23,132,000	2,044,000	25,176,000
August 1, 1890	24,087,000	2,863,000	26,950,000
August 1, 1889	16,071,000	5,941,000	22,012,000
August 1, 1888	29,176,000	3,800,000	32,976,000

From the foregoing it appears that while Pacific coast stocks of wheat are very much smaller than on August 1, 1895—smaller, in fact, than on a like date for years past—supplies of wheat east of the Rocky mountains are considerably larger than on August 1, 1895, so that the net result shows an increase as compared with one year ago of about 6,700,000 bushels. The encouraging side is found in the decrease from 74,890,000 bushels of available wheat on August 1, 1894, to 60,331,000 bushels on August 1, 1896, and from 73,126,000 bushels on August 1, 1893, to 60,331,000 bushels to-day. Prior to 1893 stocks of available wheat here and in the Dominion of Canada on August 1 were only from one-half to two-fifths what they are now.

The total quantities of wheat available for immediate distribution in the United States and Canada, both coasts, plus the quantity afloat for Europe from all exporting countries, on August 1, added to available stocks in Europe, as reported to BRADSTREET'S, are as follows:

	East of Rockies.	*Pacific coast.*	*Europe and afloat.*	*Grand total.*
August 1, 1896.	58,414,000	1,917,000	36,800,000	97,131,000
August 1, 1895.	46,767,000	6,850,000	65,240,000	118,857,000
August 1, 1894.	66,311,000	8,579,000	67,464,000	142,354,000
August 1, 1893.	68,689,000	4,437,000	77,944,000	151,070,000
August 1, 1892.	31,310,000	2,770,000	64,448,000	98,528,000
August 1, 1891.	23,332,000	2,044,000	60,668,000	85,864,000
August 1, 1890.	24,087,000	2,863,000	41,872,000	68,822,000
August 1, 1889.	16,071,000	5,941,000	47,120,000	69,132,000

The increase in the quantity of wheat available east of the Rocky mountains, here and in Canada on the 1st inst. as compared with one year ago is 11,700,000, but on the Pacific coast the falling off, due largely to the demand from Australia and South Africa and China, the decrease is 4,900,000 bushels. As a result, the total net decline in American and Canadian wheat supplies as contrasted with a year ago is 6,700,000 bushels. On the other hand, supplies of wheat afloat for and in Europe on August 1—36,800,000 bushels—were 28,400,000 smaller than one year before. At no corresponding date for seven preceding years have wheat stocks afloat for and in Europe been so small as at this time. Evidently the European importer has reckoned on unexpectedly large supplies abroad, and feels entirely able to get along by letting the producer or foreign holder carry the wheat. Owing to the extraordinary reduction in supplies of wheat in store, in and afloat for Europe, therefore, we find the aggregate of American, Canadian and afloat stocks of wheat on August 1 21,700,000 bushels smaller than one year ago, 45,200,000 bushels smaller than two years ago, and 53,900,000 smaller than on August 1, 1893.

Even as compared with the like date in 1892, the aggregate reported on the 1st inst. is 1,400,000 smaller. But on August 1, in 1891, 1890 and 1889, the aggregates of wheat held here, in Canada, in Europe and afloat therefor were, respectively, 85,864,000, 68,822,000 and 69,132,000, as contrasted with 97,131,000 bushels so held on August 1, 1896.

TOTALS OF AVAILABLE WHEAT IN THE UNITED STATES, CANADA AND EUROPE AND AFLOAT FOR EUROPE.

* Decrease. † Increase.

In July domestic wheat stocks fell away 3,000,000 bushels, less than one-half the decline reported in these columns in July, 1895, but about the same decrease as that noted in July, 1893. In July, both in 1894 and 1892, domestic wheat stocks showed an increase, net.

During the past seven months American and Canadian supplies of wheat fell away only 44,534,000, as compared with a decrease of 73,490,000 bushels in the like seven months of 1895 and 65,512,000 bushels in a similar portion of 1894, all of which points as much as anything else to the continued underestimates of wheat crops in this country of late years.

The movement of the world's wheat supplies during August in the past six years tended to show increases, a decrease having resulted in only one, 1893, when the August decline net was about 1,600,000 bushels. In August, 1892, the world's stocks increased 13,000,000 bushels and in 1894 9,300,000 bushels. In August, 1891, the gain was about 1,000,000 bushels, and in that month in 1890 and in 1895 the increase was about 300,000 bushels in each instance. The outlook, therefore, is for a smaller total supply of wheat here, in Canada and in and afloat for Europe on September 1 next than on a like date since 1891.

AN INCREASE IN CIRCULATION.

Statistics issued on the 2d instant make the following showing, in detail, of the general stock of money coined or issued, the amount in the Treasury, and the amount in circulation on August 1:

	General stock, coined or issued.	*In Treasury.*	*Amount in circulation Aug. 1, 1896.*
Gold coin	$564,665,228	$119,371,284	$445,293,944
Standard sil. dollars.	431,852,041	379,852,244	51,999,797
Subsidiary silver	75,667,706	16,004,145	59,663,561
Gold certificates	40,687,189	1,393,710	39,293,479
Silver certificates	344,032,504	12,375,833	331,656,671
Treasury notes, act July 14, 1890	128,343,280	34,394,748	93,948,532
United States notes.	346,681,016	109,270,478	237,410,538
Cur. certificates, act June 8, 1872	42,150,000	610,000	41,540,000
National bank notes.	226,030,042	11,933,422	214,096,620
Totals	$2,200,109,006	$685,205,864	$1,514,903,142

On the basis of these figures there was a net increase for the month of $5,177,942, as compared with a net decrease for the preceding month of $11,859,083. There were decreases as follows, viz., $10,834,539 in gold coin, $176,201 in standard silver dollars, $336,244 in subsidiary silver, $3,027,280 in gold certificates, $1,268,829 in Treasury notes of 1890, and $1,235,307 in national bank notes. The increases comprised $397,162 in silver certificates, $11,959,180 in United States notes, and $9,700,000 in currency certificates.

The statement regarding changes in money and bullion in the Treasury shows a net decrease of $3,562,255. The decreases comprised $71,171 in Treasury notes of 1890, $11,959,180 in United States notes, $1,576,083 in gold bullion, and $299,937 in silver bullion. The increases included $7,567,944 in gold coin, $1,238,201 in standard silver dollars, $273,169 in subsidiary silver, and $1,264,802 in national bank notes.

As compared with the corresponding date of last year the gold coin in circulation shows a decrease of nearly $40,500,000. Standard silver dollars show a slight increase, amounting to a little over $250,000. Subsidiary silver shows a falling off of over $860,000. Gold certificates show a decrease of over $8,800,000, while silver certificates show an increase of over $11,300,000. Treasury notes of 1890 show a decrease of over $20,000,000; United States notes show a decrease of over $33,900,000, and currency certificates show a decrease of nearly $15,400,000, while national bank notes show an increase of over $8,300,000. The total circulation on August 1 amounted to $1,514,903,142, which represents a decrease of over $99,600,000 as compared with the corresponding date last year. The circulation per capita, based on an estimated population of 71,518,000, is put by the Treasury experts at $21.18. This represents an increase of 3 cents for the month, but a decrease of $1.88 as compared with the corresponding date last year.

National bank circulation outstanding on July 31 amounted to $225,942,455, which represents an increase of $29,495 for the month and of $14,660,547 as compared with the corresponding date last year. The portion of the circulation based on the deposit of bonds amounted to $206,103,504, which represents an increase of $564,575 for the month and of $19,526,071 for the twelve months ending therewith. The portion of the circulation secured by the deposit of money amounted to $19,838,951, which represents a decrease of $535,080 for the month and of $4,865,524 for the twelve months ending therewith.

MIDSUMMER BANK CLEARINGS.

July bank clearings show a slight gain over the total for June, 1.4 per cent., and, in fact, are the largest reported in any month since January. Compared with July a year ago, however, the showing is not so favorable, a decrease of 4.4 per cent. being shown. Compared with June, 1894 and 1893, there is, naturally enough, a considerable increase to be reported, the gain over that month in 1894 being 24.1 per cent., and over 1893 4.9 per cent. The total clearings at 67 cities for the month just closed aggregate $4,347,519,645, against $4,547,846,615 in July a year ago and $4,285,000,000 in June this year. It is a fact worth noting that bank clearings at New York, the financial center of the country, do not show as large a decrease as did the rest of the country during July, the total clearings at that city aggregating $2,480,389,600, a decrease of 1.8 per cent. from July a year ago, while outside of New York the clearings aggregate $1,867,129,955, a decrease of 7.5 per cent. Compared with July, 1894, New York city clearings show an increase of 34 per cent., and compared with July, 1893, the gain is 3.6 per cent.

The showings made by the various groups of clearing house cities during July and the first seven months of the year compare with preceding months as follows:

	April, 1896.	*May, 1896.*	*June, 1896.*	*July, 1896.*	*Seven mos. 1896.*
New Engl'd.	Inc. .8	Dec. 8.4	Dec. 2.4	Dec.10.2	Dec. 2.3
Middle	Inc. .3	Dec.16.0	Dec. 3.2	Dec. 2.8	Inc. .6
Western	Dec. 1.7	Dec. 9.5	Dec. 4.4	Dec. 8.9	Dec. 2.5
Northwestern	Inc. 7.6	Dec. 4.1	Inc. 4.5	Dec. 4.2	Inc. 2.0
Southwestern	Dec. 4.0	Dec.15.9	Dec. 7.2	Dec. 9.5	Dec. 5.1
Southern	Dec. 3.3	Dec. .6	Inc. .1	Dec. 1.6	Inc. 5.3
Far-western	Inc. 3.4	Dec. 2.7	Dec. 4.1	Dec. 7.7	Inc. .5
Totals	Inc. .9	Dec.13.0	Dec. 2.4	Dec. 4.4	Inc. .3
Canada	Inc. .5	Dec. 6.3	Dec. 9.5	Dec. 4.4	Dec. 1.6

Every group of cities, it will be seen, showed a falling off in July from July a year ago. The heaviest decrease was that reported in New England, 10.2 per cent., but the decreases in the western and southwestern groups approach closely the decrease above noted. The smallest decreases are those reported by the southern and middle states groups, namely, 1.6 and 2.8 per cent. It is interesting to observe that the decrease in the northwestern group, hitherto very well situated in clearings matters, closely

approximates the decrease shown in the country as a whole. This group, by the way, reports the largest number of increases reported for the month over a year ago, fully one-quarter of all the increases being located in the northwest.

The following table of percentages of increase and decrease during the first seven months of the past four years will be found interesting:

	1896.	1895.	1894.	1893.
January	Inc. 4.8	Inc. 8.4	Dec. 31.9	Inc. 4.8
February	Inc. 20.3	Inc. 6.3	Dec. 36.9	Dec. 2.7
Two months	Inc. 11.7	Inc. 7.4	Dec. 34.0	Inc. 1.2
March	Inc. 2.2	Inc. 7.4	Dec. 30.7	Inc. 2.1
Three months	Inc. 8.4	Inc. 7.4	Dec. 33.0	Inc. 1.4
April	Inc. .9	Inc. 14.2	Dec. 25.0	Dec. 3.0
Four months	Inc. 6.4	Inc. 9.1	Dec. 31.0	Inc. .5
May	Dec. 13.0	Inc. 25.0	Dec. 26.3	Inc. 4.6
Five months	Inc. 1.9	Inc. 12.5	Dec. 30.2	Inc. 1.2
June	Dec. 2.4	Inc. 22.4	Dec. 20.8	Dec. 8.1
Six months	Inc. 1.1	Inc. 16.5	Dec. 28.1	Dec. .2
July	Dec. 4.4	Inc. 29.8	Dec. 15.4	Dec. 10.5
Seven months	Inc. .3	Inc. 16.2	Dec. 27.2	Dec. 1.6

The decrease shown in July, it will be noted, was larger than that shown in June, although the July aggregate was slightly larger. The decrease shown, however, was not nearly so pronounced as was that shown in May.

Among the larger cities reporting gains for July, too, the heaviest increases are reported from this territory. Omaha, with an increase of 32 per cent., is specially notable in this respect, while Minneapolis, with a gain of 15 per cent., is also notable. A city hitherto prominent in the matter of increase shown is that of Cleveland, which, however, shows a gain of only 2.4 per cent. The list of cities showing decreases is a long one. The falling off reported by New York, 1.8 per cent., is one of the smallest to be noted. Boston shows a decrease of 11.3 per cent., Philadelphia 11.4 per cent., while Chicago reports a decrease of 7 per cent., St. Louis of 10.6 per cent. and Kansas City of 11 per cent. Louisville and Detroit show about the heaviest decreases of any of the larger cities, with decreases of 14 per cent. each, while Richmond reports a falling off of 12 per cent. Other decreases are those of Providence 6.8 per cent., Pittsburgh 1.7 per cent., Buffalo 3.5 per cent., Cincinnati 9.9 per cent., Indianapolis 9.5 per cent., Milwaukee 2.8 per cent., New Orleans 1.3 per cent., and San Francisco 7.3 per cent. In Canada, Montreal shows a decrease of 14 per cent., while Toronto reports a decrease of 13.5 per cent.

The total clearings at 67 cities for the seven months aggregate $29,862,738,251, an increase over 1895 of only three-tenths of 1 per cent., but an increase over 1894 of 16.6 per cent. Compared with 1893, however, there is a decrease shown of 15 per cent. Three groups of cities in the United States, the New England, the western and southwestern, show decreases from a year ago varying from 2.3 to 5 per cent., while the middle states, the northwestern, the southern and the far-western cities show gains varying from one-half of 1 per cent. to 5.3 per cent. The Canadian group of cities shows a falling off of 1.6 per cent.

BANK CLEARINGS AT 87 CITIES FOR JULY, AT 81 CITIES FOR THE MONTH AND FOR SEVEN MONTHS THIS YEAR AND LAST, AND AT 74 CITIES FOR FOUR YEARS.

RUSSIAN LOANS AND FINANCE.

More or less attention has been called to the success of the latest emission of Russian loans upon the Paris market. There may be some exaggeration in the statement that the amount called for by the St. Petersburg Treasury, and offered to the Parisian financial and investing world through the Rothschilds, was oversubscribed twenty-five times. The transaction, however, was a complete success, and it is only another proof, if such proof were needed, that the French alliance is a financial necessity to Russia, even if there is little real basis for political sympathy between the most autocratic government in the world and the foremost representative of democracy in Europe. It is pointed out by critics of the operation, particularly English critics, that while M. de Witte, the Russian Finance Minister, shows large paper surpluses for the last few years, and contemplates, it is said, the long-deferred resumption of specie payments not later than January 1 next, the prevalent haze about the real condition of Russian finances makes the operation in question a matter of uncertainty to foreign investors—one which can only be accounted for on the theory that France fears that its position among the nations would be jeopardized but for the alliance between its government and the northern colossus. It is even pointed out that the loan just brought out is very favorable to the Czar's government, the bonds bearing 3 per cent. interest, and the undertakers—Berlin and Paris bankers—taking them at a price yielding about 3⅓ per cent., while the issue price to the public on the recent successful subscription was 92, making the return to the investor 3¼ per cent. Now, though Russia borrows abroad upon a 3 per cent. basis, her 4 per cent. internal loans are quoted on her own markets as below par, and, though she has so far maintained a scrupulous fidelity in meeting all her obligations toward external creditors, the increase in the capital of her debt goes on, meantime, at a pace that is, to say the least, suggestive.

The London *Financial News*, which has lately published an article in which these circumstances are taken into consideration, opens up a new and very interesting inquiry into that unknown world of Russian finance and economics by taking up a report upon the condition of the empire's landed proprietors, published in the Moscow *Gazette*. It says: "The tale disclosed by the government organ is sad indeed. The record begins with the remark that the economic circumstances of great and small landed proprietors alike become more and more embarrassed in spite of a probably good harvest. The low prices have almost ruined all agricultural interests, and as the vast majority of the Russian population depends for its very existence upon the produce of the soil, the calamity is exceedingly widespread.

"As the landowners could not sell at the ruling quotations without incurring actual loss, they retained their crops and took advances thereon at the nearest banks, whereby the difficulties were aggravated, for, after having paid wages, taxes, etc., they found themselves without money and heavily incumbered. In many important districts the peasants look to the great proprietors for work and wages, but, as the number of failures amongst the latter class has much increased, and vast areas are consequently abandoned until a new proprietor enters into possession, in the meantime the laborers are quite unable to earn wages. The value of land has decreased, according to locality, from 10 to 50 per cent. The custom-house officials in the provinces of Oufa and Orenburg state that the harvest was a good one, but the prices so depressed that the peasant proprietors had to sell their whole crop in order to pay the taxes, and were then left without money or bread. Similar accounts are to hand from the governments of Penza, Viatka, Kazaw, Volhyery, and, in fact, from most parts of the vast empire. The doleful official statement concludes thus: 'Although these reports refer to the position of affairs at the close of 1894 and the first months of 1895, no change for the better has taken place since; on the contrary, things have gone from bad to worse,

considering that rye, wheat and oats fetched respectively 10½, 7 and 9 per cent. less on June 30, 1896, than in the middle of last year.' If Russia were not almost exclusively an agricultural country she might prosper notwithstanding this great distress; but it is certainly marvelous that under existing circumstances her revenue should increase by fits and starts."

ENGLISH AUTHORITIES ON OUR MARKETS.

It would still seem that the disposition of the London speculative world to interest itself rather largely in American stocks does not meet with the approbation of the leading financial critics on that side of the water. Up to this time, indeed, it would seem that the British public has kept aloof from the American market. The latter has been strengthened, no doubt, by the return to it of some of the operators who in the last few years have been devoting their energies to the "Kaffir circus." Their purchases, supplementing the buying by large houses already more or less interested in our securities, would account in a considerable degree for the movement of speculative stocks from this market to London, though it must be remembered, as was referred to in these columns a fortnight or so ago, that a suspicion still exists that certain interests have been transferring long accounts from New York to the other side.

The views of the leading London financial papers are, however, of interest at this juncture, though it must be remembered that the expressions in question are now two weeks old, and that the increasing evidence of the feeling in favor of sound money throughout this country had not had time to make any impression upon English observers. At the same time the cautious, not to say bearish, attitude of the English market toward American stocks in the meantime would indicate that the criticisms to which reference is made have had due weight, while it is quite natural to conclude that such an incident as the breakdown of a local speculation in Chicago and the closing of the Stock Exchange in that city could scarcely fail to give apparent confirmation to unfavorable feelings. That London has bought at all and has not been a heavy seller under the circumstances is an indication that the professional speculators and large interests there are still inclined more or less to believe in the settlement of our financial and political struggle upon a sound-money basis.

The London *Statist*, to quote some of the criticisms after commenting on the plan for relieving the Treasury and for preventing gold exports, says, briefly: "Should this plan be carried out, it is possible that gold shipments may for a time be stayed, and that the necessity for a new loan may be postponed until the beginning of 1897, or, at any rate, until the elections in November have been held. The United States government has already issued four loans to replenish its gold reserve, and it is anxious not to make another issue immediately before the elections. Whether it will succeed in postponing the loan remains to be seen. At any rate, the position is not such that purchases should be made of American securities."

The *Economist*, of the same city, also takes an unfavorable position with regard to Americans, saying, in its issue of July 25: "Ever since the period of the Baring crisis the volume of transactions in United States railroad shares and bonds has been a steadily diminishing quantity, and the market, which, up to within the past couple of years, had, at more or less distant intervals, shown some semblance of life and activity, has been since the present year commenced in a condition closely bordering upon suspended animation. From time to time efforts have been made by what remains of the professional element to galvanize the department into life, but they have seldom proved successful, unless for a very few days, and the reaction has usually carried prices to a lower level than they stood at before the spasmodic revival was inaugurated. The last distinct movement of the kind took place a few weeks ago, when the talk about 'sound money' and a 'gold plank' at the St. Louis convention was put forward as an event of happy augury for the American railroad companies. On the strength of the Republican deliberations some of the operators, who a few months previously had migrated from the American market to the 'Kaffir circus,' returned to their old haunts, and, it is understood, bought somewhat freely such shares as Louisvilles, Milwaukees, Denver preferred, Ontarios and Missouris; but outside investors have shown as little disposition as ever to take up American securities, and the professionals have since found how very much easier it is to purchase than to realize when the public is off the feed."

The London *Daily Financial News*, which has been less discouraging about the American market, in a recent article has this to say concerning the situation here:

"Whatever advantages the farmers of the western states would gain by an expanded currency would be insignificant in comparison with the ruinous effect of the change on American credit. No nation, not even one so rich in natural products as America, could with impunity make such a financial experiment without the cöoperation of combined Europe. Until this peril is decisively averted, until the sober sense of the American people shows itself strong enough to combat this rash project, speculation for the rise in American securities is like trying to get a bone out of the jaws of a hungry lion. We subscribe to the dominant faith on this side that gold will triumph, or, to put it more correctly, that the folly of independent action in favor of silver will be recognized and acted upon in time. But that faith may prove to be ill-founded; Mr. Bryan may be elected, and the new Congress, when it is returned, may be steeped in monetary prejudices. The possibilities cannot prudently be thrust into the background, and that is why the American market is still charged with risks. Today, in spite of the fact that English financial houses are said to have been buying heavily, the outlook is not of a nature to encourage anyone except a neck-or-nothing gambler to have anything to do with American rails. Let the silver danger be swept out of the way, and an economically sound plan be adopted for preventing the ever-recurring drain on the Treasury's gold, and we will promptly pipe to another tune."

Taking these illustrations of the opinions held by representatives of English financial and speculative interests into account, it is not strange to learn, as the cable advices of the present week would indicate, that the Kaffir operators who bought Americans heavily on the recent decline are openly prepared to unload them at the first favorable opportunity.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

A Washington dispatch gives an account of the latest results of an investigation conducted by the United States Hydrographic Office with a view to increasing the information available about ocean currents. The investigation in question was carried on, as has been the case for several years, through the instrumentality of strong Indian-club shaped bottles of special design, bearing government marks, which are distributed to shipmasters to be set adrift at various points at sea, with data papers to be properly filled in and sealed in the bottle. These papers, in a great proportion of instances, are returned to the naval hydrographer. Ninety-five papers recently returned from floating bottles for the six months ending June 1, clearly illustrate the two main features of the general surface circulation of the waters of the North Atlantic, the first being a vast but gentle eddy, extending from the equator on the south to the parallel of 48 degrees on the north, and completely inclosing that portion of the ocean lying between the trades and the anti-trades, the region of the Sargasso sea, in which the currents are feeble in force and variable in direction; the second being a so-called extension of the Gulf stream.

It appears from a chart prepared by the Hydrographic Office that bottles cast away along the United States coast invariably sweep eastward, some dropping on the Azores, others passing to the Canaries, and those avoiding these islands eventually drift south and west across the ocean, to be found on the Windward or Caribbee islands or Mexican Gulf beaches. Those dropped overboard along the Nova Scotian coast and the Grand Banks appear to make a direct northeast voyage to the British Isles and Norway, while half of those commencing their wanderings on the equator, in mid-ocean, go south along the Brazilian coast, and the other half enter the Caribbean sea. One of the results arrived at is that a steady diminution in the velocity of drift is apparent after leaving the equator. The groups of bottles furnish knowledge of currents averaging from seven to fifteen miles per day. One of the important conclusions reached in this latest investigation is the great increase of velocity during the winter season from Newfoundland toward Great Britain and Norway.

CURRENT BUSINESS NEWS.

Industrial.

The employees of Van Wagoner & Williams, hardware manufacturers, of Cleveland, have struck in sympathy with the strikers at the Brown Hoisting Company's works.

An electrical paper reports that a combination has been effected between manufacturers of incandescent lamps to terminate the competition in that line. The concerns mentioned are the General Electric Company, the Westinghouse Electric & Manufacturing Company, the Bryan-Marsh Company, the Columbia Incandescent Lamp Company, the New York & Ohio Company, and the Perkins, Beacon and Bernstein companies.

After August 31 all employees of the elevators at Superior, Wis., will be discharged, and all grain now inspected there is to be inspected in Duluth and Sandstone, Mich.

The Chattanooga *Tradesman* says: "Matters in textile circles are quiet. A number of mills are running on short time, but others are still in full operation, with a fair number of orders on hand."

Southern lumbermen report increasing activity, with prospects favorable for a good demand.

A large number of looms in Bennett Mill No. 1 at New Bedford have stopped for a month, owing to overproduction. The Wamsutta mills have closed for a week, and other mills will curtail productions.

The fifth annual convention of the Brotherhood of Painters and Decorators has been opened in Chicago.

Advices received in Gloucester, Mass., from Iceland are to the effect that "the fishing has been almost a failure. Vessels went south, but found no fish. The fleet could not fish off shore on account of the ice, which extends forty miles and covers the best grounds."

The largest curtailment of production since the shut-down agreement went into effect in the Fall River cotton mills is now in force, 41,122 looms being idle.

The Arlington Mills, Lawrence, Mass., with the exception of the dyeing, finishing and packing departments, will shut down August 12 for five and a half weeks. About 2,500 operatives will be thrown out of employment.

The Johnson Steel Works at Lorain, Ohio, closed down last night at midnight, and 800 men are thrown out of employment. The suspension, which it is believed will be only for a short time, is owing to a lack of orders.

Great excitement is reported at Montrose, Randolph county, W. Va., "over the discovery of oil in paying quantities. Land is changing hands hourly, and all real estate in the country around is being leased as rapidly as possible. Pittsburgh oil men who have been communicated with will be on hand to commence operations."

Commercial.

The Georgia commissioner of agriculture has "issued an address to farmers urging them to hold their cotton and combine to defeat the advance of 100 per cent. in the cost of cotton ties."

The Philadelphia *Press* says: "Gulf harbor improvements have turned the tide of wheat and corn, particularly the latter, down the Mississippi, just as the Joint Traffic Association is seeking to advance rates. This country has only just begun to see the effect of water competition on railroad values. The opening of the 800-foot lock in the Sault Ste. Marie Canal is only one of many like enterprises in the future."

The wheat and oat crops in West Virginia are reported to have been "almost wholly destroyed by the incessant rains."

The Chicago *Prairie Farmer* reports the crop equal to about 259,000,000 bushels winter wheat and 147,000,000 bushels spring wheat. Most other reports range about 450,000,000 bushels, while one or two reduce the estimate to about 400,000,000 bushels. All are probably too low.

Beerbohm estimates Europe's wheat crop the past six years averaged 1,400,000,000 bushels; that this year's crop will be about 1,464,000,000 bushels, or about 1 per cent. less than in 1895. The United Kingdom crop will likely be 20,000,000 bushels more than last year. Many think the yield will average 32 bushels per acre, and harvest be the earliest of any in fifty years. France claims nearly a full crop, with prospects of imports being at a minimum point. Germany, Italy, Belgium, Holland, Prussia, all report favorable prospects.

Financial.

The following securities were sold at auction this week at New York:

40 Shares Blackwell's Durham Tobacco Co	$13 a share
10 Shares United States Trust Co	1071
$2,000 Bay State Gas Co. 7 per cent. income bonds, due 1899	28

At Chicago, Armour & Co. have offered employees Mexican dollars, containing eleven grains more silver than American dollars, for every 50 cents worth of work. Another Chicago house has offered any 50-cent article in their store and a Mexican silver dollar for $1 United States money.

Gold holdings of the prominent banks in fourteen cities in the United States on July 14, as reported to the Comptroller of the Currency, were about $95,000,000, the amounts being distributed as follows: New York, $48,869,499; Boston, $7,161,128; Philadelphia, $7,440,111; Chicago, $16,836,022; Baltimore, $2,020,270; Washington, $1,238,056; Cincinnati, $1,026,304; Cleveland, $1,586,275; Pittsburgh, $3,283,391; Detroit, $1,188,552; Brooklyn, $628,034: Milwaukee, $2,070,680; New Orleans, $594,899; San Francisco, $1,476,502.

The New York *Stockholder's* tables show that the disbursements of interest and dividends chiefly on railroad securities on August 1 of the years named were:

	1893.	1895.	1896.
Bonds	$362,515,143	$316,537,649	$359,443,643
Interest	8,848,006	7,813,163	8,709,350
Stocks	708,700,619	448,816,123	450,155,728
Dividends	18,809,841	14,113,116	13,886,463
Total disbursements	27,657,847	21,926,285	22,595,763

Government interest disbursements will bring the total up to $27,000,000.

"The fruits of the free-silver agitation in the United States are being brought home to Americans traveling in Canada," says the *Tribune*. "American silver money is no longer acceptable there. For years it has passed current, equally acceptable with Canadian coin, but the Canadians have decided that self-interest demands its rejection hereafter."

The Philadelphia *Press* says: "Wages in all silver countries are only from one-quarter to one-half what they are in the United States, and are much less than those in Europe. In addition, the purchasing power of those wages are one-half less than in the United States."

Clapp & Company point out that "about one-half the silver in circulation is in Asia; about one-third in Europe; about one-half Europe's supply is in France. Subsidiary coins principally comprise the world's circulating medium. A very small percentage of our business is with silver-using countries."

Mr. B. E. Walker, general manager of the Canadian Bank of Commerce, is in New York, and has given an explanation of gold shipments to Canada, which have subjected Canadian banks to criticism in some quarters. "The Canadian banks which have branches in the United States have," he said, "quite as large an interest in the finances and welfare of this country as the average American banker. They have not, as far as I know, shipped gold to Canada from a dread of future complications or fear as to the present situation, but it is well to understand their business necessities at times. Nearly half the products exported from Canada are sold in the United States. The purchase price of these sooner or later appears at the credit of a Canadian bank at its New York agency. Ordinarily the Canadian bank supplies the importer in Canada with exchange on London through their New York agency, and thus enables the Canadian people to pay England for their imports by the money arising from Canadian exports to the United States. But if such operations do not precisely balance themselves, as is frequently the case, the difference, if in favor of Canada, must result in the shipment of gold from the United States to Canada. Any shipments made by Canada banks having branches in this country."

The American National Bank of New Orleans has closed its doors, "having been unable on the previous night to meet its engagements with the Clearing House. It had a capital of $164,000, and, according to the last reports to the Comptroller of the Currency, owed depositors $350,000 and had borrowed $160,000."

The Conkling Brothers' banking house in Nevada, Mo., the Bank of Bronaugh, Bank of Sheldin and the Bank of Richards, all the property of Conkling Brothers, "have been closed under an injunction of the Vernon, County Court. The action was based on a report of the state bank examiner."

Railroads.

At the special election in Cincinnati, held on Monday, the proposition to sell the Cincinnati Southern Railway to the Southern Railway Company and the Cincinnati, Hamilton & Dayton interests, was rejected by a vote of 15,730 to 15,392.

The United States Court at Milwaukee has granted to the counsel for the first mortgage bondholders of the Green Bay, Winona & St. Paul Railroad Company permission to examine the report of Special Master Hoyt, with a view of moving for the reopening of the report.

The following gross and net earnings are reported for June:

	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.

The all-rail east-bound shipments of dead freight from Chicago last week were 46,486 tons, against 46,454 tons the previous week and 43,330 tons the corresponding week of the previous year.

The Western New York & Pennsylvania Railroad Company reports for the quarter ending June 30:

	1896.	1895.	Changes.
Gross earnings	$736,601	$815,950	Dec. $79,349
Operating expenses	449,097	583,354	Dec. 134,257
Net earnings	$287,504	$232,596	Inc. $54,908
Other income	1,172	6,074	Dec. 4,902
Totals	$288,676	$238,670	Inc. $50,006
Fixed charges	211,161	149,780	Inc. 61,381
Surplus	$77,515	$88,890	Dec. $11,375

The Columbus, Ohio, *Despatch* says that French capitalists have the major portion of the subscribed stock of the new Peoria & St. Louis road. It is the object of the company to secure an inlet from Springfield to St. Louis and operate an air line from Peoria to St. Louis, via Springfield.

The Chicago & Alton Railroad Company has declared a quarterly dividend of 2 per cent. on its common and preferred stocks, payable September 1.

Railroads now grant free lighterage to flour arriving at New York city, as well as five days' free storage instead of three. The new rule is satisfactory to members of the Produce Exchange.

One of the first things done by the Illinois Central Railroad on assuming control of the Chesapeake & Ohio Southwestern was to restore wages, which were cut 10 per cent. about three years ago by the receiver of that road.

The Fitchburg Railroad Company reports for quarter ended June 30:

	1896.	1895.	Changes.
Gross earnings	$1,845,988	$1,764,890	Inc. $80,898
Operating expenses	1,389,548	1,298,758	Inc. 90,787
Net earnings	$456,243	$406,132	Dec. $9,889
Fixed charges	382,158	365,643	Inc. 16,515
Surplus	$74,085	$100,489	Dec. $26,404
FOE THE YEAR ENDED JUNE 30.			
Gross earnings	$7,606,765	$7,149,313	Inc. $457,452
Operating expenses	5,462,316	4,970,766	Inc. 491,550
Net earnings	$2,144,449	$2,178,547	Dec. $34,098
Fixed charges	1,511,722	1,518,115	Dec. 6,393
Surplus	$632,727	$660,432	Dec. $27,705

The Boston & Albany Railroad Company reports for the quarter ending June 30:

	1896.	1895.	Changes.
Gross earnings	$2,340,882	$2,288,315	Inc. $52,567
Operating expenses	1,869,425	1,764,576	Inc. 104,849
Net earnings	$471,457	$523,739	Dec. $52,282
Fixed charges	109,366	137,467	Dec. 28,101
Surplus	$362,091	$386,272	Dec. $24,181

The Cleveland & Pittsburgh Railroad Company has declared a quarterly dividend of 1¾ per cent., payable September 1.

The Pennsylvania railroad has reduced the working time in the Altoona shops to five days of eight hours each per week, about 5,000 men being employed.

The South Carolina & Georgia Railroad Company contemplates remodeling a rice elevator into a modern grain elevator, with a storage capacity of about 200,000 bushels. The cost of the improvements will be about $10,000.

The Interstate Commerce Commission has begun an inquiry at Chicago into the alleged discrimination in grain freight rates. The traffic manager of the Santa Fé road, W. N. Biddle, testified that discriminations had been made, but that all the roads had abandoned the scheme on July 7, and were now complying with the law.

Foreign.

The government of Peru has effected a loan of 80,000,000 francs guaranteed by a salt tax, subscribed for partly in Paris and partly in Lima.

Austria is reported to have proposed to create "an international union to protect the central European grain producers against American competition."

Mr. Goschen says: "In Austria the manufacturers insisted they made considerable profit by the depreciation of the currency, as the cost of labor had not risen in the same proportion as the manufactured goods."

News has been received that Warner, Blodgett & Co., the American firm in the Philippine Islands, "have been forced out of business at Manila. The firm was one of the largest houses in the Asiatic trade, and the story of its abandonment of business" says the *Tribune*, "is a narrative of persecution on the part of Spanish authorities which has seldom been surpassed in exasperating features."

An English paper says: "A discovery of tellurium is announced from Kalgoorlie. Tellurium, an alloy of gold, is used in the manufacture of delicate scientific instruments, and particularly of thermo-electric batteries."

In the issue of the *Labor Gazette* for July some details are given respecting British profit-sharing in 1895–96, showing that "the total number of persons employed by the 85 firms now practising profit-sharing, and as to which particulars on this point have been received, is—minimum, 23,947; maximum, 26,187. Tables are given showing the number of working hours per week of the employees of workmen's coöperative distributive societies in Great Britain, and there is, too, a summary of the report for 1895 of the chief inspector of factories."

The Clyde (Scotland) crushed sugar market is idle. It is reported that a firm in Glasgow "have suspended, and that their failure largely involves Greenock refiners."

Minister Romero, who has just returned from a visit to Mexico, says: "Everything is progressing satisfactorily in Mexico, and the country is prosperous. With its natural richness Mexico needs only capital, labor and peace to advance with rapid strides. As to politics, the people of Mexico are interested in anything that interests the people of the United States, with whom they are on such friendly terms."

The London *Financial News* says: "Zululand promises to become of some importance as a gold-mining country. The number of prospecting licenses in force at the beginning of this year was 498, as against 297 twelve months earlier; the number of Europeans engaged in prospecting and mining was 264 against 13, and of natives 1,115 against 370."

Burmah's whole system of state railroads, 1,000 miles in length, has been bought up by a syndicate for $30,000,000.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Homestead—Debt—Mortgage.

The Supreme Court of Louisiana held, in the recent case of Stewart et al. vs. Sutton, that where a party sells the homestead for an existing debt as the price, and immediately the purchaser transfers it back to the vendor and takes a mortgage and vendor's lien on the property, the transaction will be viewed as one of mortgage to secure the debt, and in violation of article 222 of the Louisiana constitution.

Husband and Wife—Creditors.

The Supreme Court of Georgia held, in the recent case of The Hawkinsville Bank and Trust Company vs. Walker, that mere inadequacy of consideration in a deed from a husband to his wife, even if he were insolvent at the time of its execution, will not of itself alone avoid the deed at the instance of creditors, if there was no intention to hinder, delay or defraud them, but that the inadequacy of consideration, if gross, would be a badge of fraud, and might be so gross, when combined with other circumstances, as to amount to proof of actual fraud.

Constitutional Law—Warehouses.

The Supreme Court of Minnesota lately held constitutional chapter 64, sections 7724–7729, General Statutes of 1894, entitled "An act providing for the erection of public grain warehouses and grain elevators on or near the right of way of railways, and providing for condemnation proceedings in connection therewith," and decided that this statute authorizes a party who has erected a public elevator and is operating it on the site sought to be condemned under a license from the railway company which has been revoked, to take effect in the near future, to acquire the right and easement, to continue for a fixed term, and to maintain and operate a public elevator on such site. In re application of Stewart vs. Great Northern Railway Company.

Corporation—Conveyance—Purchaser.

The Supreme Court of Louisiana held, in the recent case of The Shreveport Rod and Gun Club vs. The Shreveport Gun Club, that where, under a conveyance of immovable property under a resolution of the board of directors of the corporation accepting the offer to buy, the vendor was assailed by parties claiming they were the purchasers intended by the resolution, and were deprived of the property by the fraudulent substitution of those to whom the conveyance was made, it was competent for such parties holding the title by competent deed to show by testimony that the conveyance was in pursuance of their offer to buy accepted by the board, and thus that the conveyance accorded with the resolution, such testimony not infringing on the prohibition of parol to create or destroy title to immovable property.

Contract—Breach—Limitation.

The Kentucky Court of Appeals held, in the recent case of Davis vs. Brown, that a suit to recover damages for breach of a parol contract not to sell buggies in the town of Owenton was barred after the lapse of five years from the date of the contract, the defendant having continuously disregarded the contract from the time it was made; that the fact that the breaches for which the plaintiff sought to recover occurred within five years before the action was instituted did not prevent the statute from operating as a bar; that as the petition averred that the contract has been continuously disregarded and violated from the time it was made, the averment in the answer that more than five years had elapsed since the contract was alleged to have been made constituted a sufficient basis for the plea of limitation, and that the defendant having denied the making of the contract sued on, it was error to permit plaintiff to prove statements made by defendant relating to another contract.

Warehouse—Lease—Notes.

The Supreme Court of Georgia held, in the recent case of Lightfoot et al. vs. West, that where in a written contract for the lease of a warehouse for a term to begin upon a day named in the future, it was stipulated that the specified rental, for which contemporaneous promissory notes were given, should not abate by reason of the destruction or injury of the property by fire, but that the lessor, in such event, should rebuild in a reasonable time; that the lessees were "to keep said property in as good repair as it is when turned over to them, and to turn it back to the lessor in as good repair as it is now," and that the lessees were to pay for, and not remove at the end of the lease, all extra improvements they might put upon the premises, and a shed attached to and constituting a valuable and useful part of the warehouse fell before the term of the lease began and before the lessees took possession, it was the duty of the lessor, and not of the lessees, to rebuild the same, and that on the trial of an action upon one of the rent notes, the court erred in refusing to allow the defendants to amend a plea of partial failure of consideration, already filed, in which it was alleged that in consequence of the plaintiff's failure to rebuild the shed, the rental value of the premises had been reduced in an amount stated, by further alleging that the defendants were induced to hold on to the lease and to take possession at the beginning of the term because of a verbal promise to rebuild made by the lessor, with which he subsequently refused to comply, and but for which they would have declined to carry out the contract. This plea, as thus amended, the court said, should have been passed upon by the jury, in connection with such evidence as might have been offered in support of it.

Insurance—Fire—Damage.

The Supreme Court of Georgia held, in the recent case of Cuesta vs. Royal Insurance Company of Liverpool, that where there was an action upon an insurance policy insuring the person to whom it was issued against "all direct loss or damage by fire" on certain described goods, and it appeared from the plaintiff's evidence that after the building in which the goods were located had been considerably injured by fire they were permitted to remain therein until the building had been repaired by putting a new roof upon the same, that after this was done the owner of the goods, by his agent, resumed his business, in the course of which some of these goods were sold, and that they were subsequently injured or destroyed by the falling of the walls of the building, this occurring some twenty-five days after the fire, the trial judge did not on this state of facts err in holding that the loss sustained by the plaintiff was not the result of the fire, and was therefore right in granting a non-suit.

Stockholders' Liability—Minnesota Law.

The Supreme Court of Minnesota held, in the recent case of Cowling vs. Zenith Iron Company et al., that under section 3 of article 10 of the Minnesota constitution, which provides that "each stockholder of any corporation, excepting those organized for the purpose of carrying on any kind of manufacturing or mechanical business, shall be liable to the amount of stock held or owned by him," a mechanical business within the meaning of said exception is one closely allied to or incidental to some kind of manufacturing business; that the mining of iron ore is such a mechanical business; that the stockholders of a corporation organized for that purpose are exempt from the stockholders' "double liability," and that section 2834, General Statutes of 1894, being one of the sections of the act under which such a corporation was organized, does not prevent it from being a corporation whose stockholders are exempt under the constitution, if the corporation never took the benefit of that section.

Carrier—Bill of Lading—Delivery.

The Kentucky Court of Appeals held, in the recent case of The Louisville & Nashville Railroad Company vs. Hartwell, that the shipper of goods may, even after their delivery to a carrier, and after the bill of lading has been signed and delivered, alter their destination and direct their delivery to another consignee, unless the bill of lading has been forwarded to the consignee or some one for his use; that, however, this would not be the case if a state of facts existed which made the delivery of the goods to the carrier a delivery to the consignee and the owner of them; that while the consignee in the bill of lading is presumptively the owner of the goods, yet when the shipper gives notice after the goods have been received by the carrier and before they are delivered to the consignee that he is not to deliver them to the consignee, the carrier must take notice that the consignor intends to retain control of their ultimate disposition, and after such notice the presumption no longer obtains that the consignee is the owner of the goods; that bills of lading are assignable, and when properly indorsed and delivered with the intention of passing the title to the goods, it is a constructive delivery of them, and that where the shipper of goods, after delivering them to the carrier and receiving a bill of lading, made a draft upon the consignee in favor of a bank and delivered it to the bank, together with the bill of lading, at the same time notifying the carrier to deliver the goods to the consignee unless he presented the bill of lading and paid the draft, the carrier having delivered the goods to the consignee without requiring him to present the bill of lading and pay the draft, was liable to the shipper for such damages as he had sustained not exceeding the value of the goods or the amount of the draft.

BUSINESS NOTES.

Corea's Concession to Americans.

Dispatches to the St. Petersburgh *Novoe Vremya*, from Vladivostock, announce that Corea has conceded to a syndicate of Americans the right to construct a railroad from Seoul, the capital, to Chemulpo, the main port and harbor. The Americans, in addition, have the right to work the minerals along the line of this road. Other concessions have been granted to France and Russia. Seoul, it is said, is now quiet, the British sailors who were landed for the protection of the consulate of Great Britain have been withdrawn and the American sailors who were sent ashore to protect the United States consulate will be withdrawn in a few days.

Trade in Constantinople.

The Constantinople correspondent of the London *Times* writes, under date of July 10: "Among the symptoms of the prevalent economic prostration may be mentioned the fact that the number of sheep and oxen killed by Constantinople butchers in May and June was less by 40 per cent. than it was in the corresponding months of 1895. Merchants, and, indeed, all business folk, are reducing their establishments; brokers who a year ago had full work for ten clerks now scarcely employ two, and shopkeepers have dismissed half their assistants, male and female. This loss of occupation to so large a number of breadwinners necessarily causes much distress in the class to which they belong."

The Billet Pool.

The Philadelphia *Press* says: "The pool formed last April by the steel billet manufacturers has not proved a success, because of lack of fair play, so called. Certain of the plants worked up billets, which are really raw material, into finished product. They charged pool rates to outsiders, but in making estimates on finished work put the billets at a low valuation. The resulting ill-feeling became intensified, until it was determined to hold a special meeting. It gathered at the Holland House. The great majority of those present were deeply anathemizing the Carnegie and Illinois works for their so-called grasping policy. At the finish of the day's talking it was said that the price schedule had been reaffirmed, but the disputed question of allotment was not settled."

Street Railway Statistics.

The *Street Railway Journal* furnishes statistics of the street railways of the United States by motive power and by states. The mileage under the different systems by groups of states is as follows, miscellaneous motive power omitted:

	Horse.	*Electric.*	*Cable.*	*Total.*
New England	88	1,729	....	1,823
Eastern	414	3,884	148	4,634
Central	210	4,105	241	4,600
Southern	164	793	1	1,096
Western	343	1,622	209	2,317
United States	1,219	12,133	599	14,470

The capital stock and funded debt, by groups of states, is as follows:

	Capital.	*Debt.*
New England	$57,904,115	$41,438,100
Eastern	379,268,236	303,633,284
Central	229,862,755	168,914,650
Southern	30,582,275	22,058,300
Western	87,196,400	54,552,057
United States	$784,813,781	$590,546,391

Values of Silver Coins.

The Philadelphia *Press* says: "The following figures showing the decline in the value of silver coins of various countries since 1874 is interesting, as showing that the free coinage of silver in India up to 1893 did not protect the rupee of that country, which fell in value with silver coins with the rest of the world:

	Austria florin.	*Russia rouble.*	*Mexican dollar.*	*Peru sol.*	*India rupee.*
Unit	47.6	77.2	101.6	96.5	45.8
1874	47.6	77.1	104.7	92.5	45.8
1875	45.3	73.4	99.8	91.8	43.6
1880	41.3	66.9	90.9	83.6	39.7
1883	40.1	65.0	88.2	81.2	38.6
1884	39.8	64.5	87.5	80.6	38.3
1885	39.3	63.6	86.4	79.5	37.8
1886	37.1	60.1	81.6	75.1	35.7
1887	35.9	58.2	79.0	72.7	34.6
1888	34.5	55.9	75.9	69.9	33.2
1889	33.6	54.4	73.9	68.0	32.3
1890	42.0	68.0	92.3	85.0	40.4
1892	32.0	51.9	66.9	61.6	29.3

1894	....	41.3	50.4	46.4	22.0
1895	....	35.3	62.2	48.6	23.1

Iron Ore Mines Shut Down.

The Philadelphia *Ledger* says: "The closing of what are known as the Rockefeller Iron Mines, at Bessemer, Mich., in the Gogebic range, was in pursuance of the following dispatch, dated New York, July 30, and sent to W. J. Olcott, general superintendent Tilden Iron Mining Company, at Bessemer: 'We have decided to discontinue mining iron ore at the Tilden mine July 31. We are not selling any ore. Our regular customers have not bought their supply, and tell us they now find it impossible to sell their pig iron product because the agitation in favor of free silver has stopped investments in enterprises which would otherwise have enabled them to operate their works as usual.' This dispatch was signed by C. F. Rand, president. Ordinarily the Tilden mine produces 600,000 tons of ore a year. President Rand said to-day he did not think there would be any destitution among the miners. It was summer, and the men could find other work. The Iron Belt mine, also on the Gogebic range, has, it is announced, reduced its force from 280 to 80 men for the same reason the Tilden mine was closed."

Canadian Pig Iron.

A London exchange says that "it is a question if the change in the bounty on Canadian pig iron will come into effect. Heretofore the Dominion bounty was $2 a ton, but the iron must be the product of Canadian ore. Last month that condition was modified by an order in Council which extended the bounty to pig iron made in Canada from ore part of which is imported, the manufacturer getting a percentage of the $2 equal to the percentage of domestic ore in the mixture. This concession was made for the reason, first, that there was too much uniformity in the available Canadian ores for the production of all grades of iron required; second, that the Ferrona Iron Works have bought hematite deposits in Newfoundland, and that the Hamilton Blast Furnace Company have to import hematite from the Lake Superior district. This, of course, was not relished by the Canadian ore merchants, who regarded it as free trade with a premium on importation. But as the order in Council has never been ratified by Parliament, and as the Liberals are now in charge, the new arrangement may be canceled."

Why Cuba Rebels.

The New York *Independent* says: "Mr. Elbert Rappleye, staff correspondent of the *Mail and Express*, gives in brief the reasons why the Cubans fight—taxes, debt, discrimination against them in trade, oppression, disfranchisement. Of the twenty-six millions paid in taxes, barely 2 per cent. goes to the island itself. The Cuban pays twice what a Spaniard pays in Europe and gets absolutely nothing in return. A debt of four hundred millions is laid on the people of Cuba, the heaviest tax by nearly twofold of any country in the world. And meanwhile 'the ports are practically closed to foreign commerce.' Shipments, even of American flour, go first to Spain and afterwards to Cuba. All this cost is added to the goods the Cuban buys. It is shown, further, that by the election laws only about three in a hundred of the Cubans have a vote. Scarcely one has ever sat in the Spanish Cortes. All the offices are held by Spaniards, and the corruption among officials is almost beyond belief. Even the reforms sometimes reluctantly granted by the Cortes are not carried out. Campos himself did not dare guarantee their enforcement."

The International Labor Congress.

The London *Times* says that at this congress, which was to meet recently in London, "Great Britain will be represented, in round numbers, by 500 delegates. The Germans will not be so numerous as at Zurich, where they deputed 92 delegates. On the other hand, the French, who only sent 40 delegates to Zurich, are likely to be represented by more than 100 in London. The Paris Municipal Council has voted a subvention of £400 to send over a delegation of 40 to 50 representative workingmen, and out of the 50 Socialist members of the French Chamber of Deputies a considerable proportion will also come to London. From Belgium there will be a strong representation of what is called the intellectual proletariat. The Brussels Society of Socialist University students and ex-students sends seven delegates—three are students and four are professors at the new university. One of them, Professor La Fontaine, is also a member of the Belgian Senate. Members of the Belgian Parliament who will speak on behalf of the Labor party of that conntry are likewise announced. From Austria, Italy and Hungary there will not be so many delegates as at Zurich. But other nations which were not represented last time—namely, Sweden, Denmark and Portugal—are sending a few delegates. There is also some hope that one or two representatives may come directly and expressly from Russia. The Balkan States, Roumania, Bulgaria, Servia and Poland, which counts as a separate nation in these congresses, are sending delegates. On the other hand, Australia and the United States of America will be but feebly represented at the congress. Taking all these facts together, it is necessary to provide room for something like 800 delegates."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

In nearly all lines trade is unchanged, in some departments lifeless. South and southwest the heat has had an unfavorable influence, but merchants in all directions continue to buy for needs only. While it is too early for fall trade to assume large proportions, distribution of clothing and shoes at Chicago has improved somewhat, although less active than one year ago. At several centers bankers have preferred not to loan as freely as heretofore. Merchants not wishing to be refused have accordingly curtailed their requests for accommodation. Mercantile collections are slow, in some instances more difficult to make. Renewed scrutiny of credits has had an effect in restricting the same. Iron and steel industries remain excessively dull. Makers of pig are piling stock. Large lots could be obtained at concessions. Cotton yarn manufacturers have agreed to curtail production 50 per cent. during August, and owing to lack of demand western packing-house emyloyees have been laid off. There is no improvement in wool, and some Philadelphia mills have shut down. Portland advices are that no considerable movement of Oregon wool will take place until after election. Cotton goods remain unchanged, notwithstanding the higher price for cotton. The relative activity among makers of boots and shoes is because of orders on hand rather than new business.

Stock values in the New York market have broken on liquidation and bearish pressure, with an utter lack of buying support. Besides the uncertainty of the political outlook and the slackness of trade there have been several depressing factors, including the breakdown of a local speculative inflation at Chicago, the appearance of pressure in the money market, and talk of damage to railroad earnings. London is less bullish in regard to American securities, but bought on the extreme breaks here. The success of the bankers' efforts to restore the Treasury gold reserve is disregarded, as well as the stand taken by foreign bankers in preventing gold exports. Demand sterling is held firmly at 4.89 by the syndicate.

Although reflecting midsummer dullness, July bank clearings are larger than those for June, and, in fact, larger than for any month since January, 1896, although 4.4 per cent. smaller than July a year ago. Compared with July, 1894, there is a gain this year of 24 per cent., and of 4 9 per cent. over July, 1893. Total clearings for July aggregate $4,347,519,645, against $4,285,000,000 in June. Only one-third of the cities show gains over a year ago. Heaviest decreases are outside of New York city. Most numerous gains are in the northwest. The smallest increase is in the south. For seven months total clearings aggregate $29,862,738,251, a gain over last year of three-tenths of 1 per cent. and over 1894 of 16.6 per cent., but a falling off of 15 per cent. from 1893.

Weaker quotations for iron and steel are followed by those for hides. Indian corn is off on the effects of the intense heat on the crop, and wheat in sympathy with it and free sales and lack of buying demand. Other declines are for coffee and petroleum. In addition to a higher price for cotton on damage to the crop from extreme heat, prices for sugar, lard and pork are higher, the last two in sympathy with a speculative movement in those products. The week's clearings at 77 cities during the past six business days amount to $912,000,000, 12.5 per cent. more than last week, but 6.6 per cent. less than in the first week of August, 1895. As compared with the corresponding week in 1894 this week's increase is 18 per cent., and 14 per cent. as compared with 1893. Contrasted with 1892 the falling off in bank clearings this week is 8.7 per cent.

Stocks of available wheat here, in Canada, in and afloat for Europe are 21,700,000 bushels smaller than a year ago, 45,200,000 bushels smaller than two years ago, and 53,900,000 bushels smaller than on August 1, 1893, these heavy decreases being due to the extraordinary falling off in the quantity of wheat being carried in and afloat for Europe compared with like dates in years referred to. For seven months American and Canadian supplies have fallen away a little more than one-half what they did in 1895, and about two-thirds the decline in seven months of 1894.

Business failures throughout the United States this week number 269, a decrease compared with one week ago, when the total was 294. The falling off is principally in the middle and New England states. As compared with one year ago this week's total shows an increase of 60, and with two years ago an increase of 72. In the first week of August, 1893, during the panic, the total number of failures was 474.

Comparatively favorable reports concerning general trade are more numerous than in preceding weeks. Pittsburgh jobbers report a slight increase in the volume of trade, but at Baltimore there is a marked improvement, with jobbers receiving orders freely. Owing to lower rates of water freight, Duluth is shipping lumber east freely. Minneapolis jobbers report shipments of merchandise in nearly all lines about equal to those in the like week of 1895, but advance orders are smaller than a year ago. Omaha merchants report collections above an average for the season, but country merchants are buying sparingly. New Washington wheat will begin to move freely soon. This is expected to improve trade on the coast. The favorable condition of the Texas cotton crop continues to help jobbers at Galveston. Notwithstanding unfavorable reports as to cotton in Louisiana, expected payments of sugar bounties next week and favorable reports as to the Louisiana sugar crop tend to stimulate trade at New Orleans. Both Savannah and Augusta report a fair volume of business, with improvement in some lines, although collections are slow.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 2,747,000 bushels, as compared with 2,648,000 bushels last week, 1,550,000 bushels in the corresponding week one year ago, 3,417,000 bushels two years ago, and with 5,018,000 bushels in the like week of 1893.

General business in the Province of Ontario is quiet, even featureless. Toronto jobbers report orders are slow, but the outlook for fall trade is fairly satisfactory. No improvement in business is reported from Montreal. Purchases are of the sorting-up character, and collections smaller than usual, with more frequent requests for renewals. At Quebec city business is quiet in all lines, except among shoe manufacturers. Collections, however, are generally unfavorable. Crop prospects in the Province of Quebec are fair, except for hay, which will be only half a crop. Advices from Newfoundland are that the fisheries outlook is not encouraging. St. John, N. B., continues to make heavy shipments of lumber, and the crop prospect in that province is favorable. General trade at Halifax and throughout Nova Scotia is fairly active, and collections are satisfactory. Demand for fish is good, and the crops are looking well. Bank clearings at Winnipeg, Hamilton, Montreal, Toronto and Halifax aggregate $19,290,000 this week, about $2,000,000 more than last week, 11 per cent., but $1,600,000 less than in the corresponding week last year, a falling off of 8 per cent. There are 35 business failures reported from the Canadian Dominion this week, compared with 37 last week, 31 in the week one year ago, and 40 two years ago.

FINANCIAL.

The Money Market.

Some disturbance and calling of loans was witnessed in the New York market this week. This is attributed to the influence of the Chicago troubles, which has caused a demand for money there and at the same time created conservatism on the part of institutions which have outstanding loans in Chicago. There have also been heavy borrowings in this market for account of large interests in the former city. In addition to this the demand for money at the south and west in connection with the crop movement is beginning to show itself. Call money has consequently been more active and was at times rather scarcer than customary of late, and rates varied from 1½ to 7 per cent., with renewals much firmer, especially on Friday, when banks marked up standing loans to 4 per cent., and borrowers who paid off their loans found, on going to the Stock Exchange, that the supply was limited, forcing the rate up to 6@7 per cent. Time money is dull, the inquiry being rather good for long time, while lenders are not as plentiful and show increasing firmness in regard to rates, collateral, etc. Rates are 5@5½ for short and 6 per cent. for long periods. At the end of the week the scarcity of time money was very marked. An inquiry for sterling loans is reported, but little is doing of that nature. Commercial paper is very dull. Offerings are light and the buying limited, the current rates being nominally 5½ @6 per cent.

The New York Banks.

Last Saturday's averages were regarded as unfavorable, though the showing made in the Clearing House statement corresponded with the known movement of funds for the week. The change in cash was a net loss of $2,857,000, the gain in legal tenders and loss in specie being in keeping with the transactions between the Treasury and the banks in connection with the so-called relief plan. The decrease of $4,700,000 in loans and the reduction of $4,704,000 in deposits were the unfavorable features. As a result of the other changes the surplus reserve decreased $770,000, the figures comparing as follows with those of the week before:

	July 25, '96.	Aug. 1, '96.	Changes.
Loans	$474,239,900	$469,535,900	Dec. $4,704,000
Specie	56,231,300	45,254,700	Dec. 9,976,600
Legal tenders	85,607,800	92,727,400	Inc. 7,119,600
Deposits	493,358,200	485,014,000	Dec. 8,344,200
Circulation	14,676,700	14,80[illegible],000	Inc. 124,300
Total reserve	141,839,100	138,982,100	Dec. 2[illegible]
Reserve required	129,339,550	121,253,500	Dec. 2[illegible]
Surplus reserve	18,499,550	17,728,600	Dec. 77[illegible]

At the corresponding period last year the surplus reserve was $40,917,175, against $69,053,700 in 1894.

The Boston Banks.

	Aug. 1, '96.	July 25, '96.	Changes.
Loans	$162,209,000	$162,542,000	Dec. $333,000
Circulation	9,986,000	9,957,000	Inc. 29,000
Deposits	97,483,000	98,448,000	Dec. 965,000
Due from reserve agts	19,036,000	19,644,000	Dec. 608,000
Legal tenders	7,399,000	7,449,000	Dec. 50,000
Specie	7,571,000	8,964,000	Dec. 1,393,000
Surplus reserve	1,576,143	2,672,400	Dec. 1,096,257

Silver.

The silver market has been steady and altogether featureless. Fluctuations in the quotations for bars, both here and in London, were of a fractional nature, and left the price in the latter market 1/16d. lower. The speculative price of bullion certificates here was affected by the general decline in the stock market, the trading aggregating 33,000 ounces, at from 69⅛ down to 68⅝.

SILVER PRICES.

	Aug. 1.	Aug. 3.	Aug. 4.	Aug. 5.	Aug. 6.	Aug. 7.
London	31⅜d.	31⅜d.	38⅛d.	38⅜d.	31 5-16d.	31 5-16d.
N. Y.	68¾c.	68¾c.	68¾c.	68⅝c.	68⅝c.	68⅝c.

Foreign Exchange.

The control of the syndicate over the exchange market is complete, and while no formal announcement is made of its policy, the line of action followed seems to be to keep rates as high as possible without incurring the danger of gold exports. The feature of the market is the very slack demand for bills. The large importing interests which have allied themselves with the syndicate are not buying, and the inquiry from other sources has shrunk to very small proportions. The current rate for demand sterling held steady at 4.89 early in the week, but on Tuesday bills became scarce, and the quotations were 4.89@4.89¼, while posted rates were marked up ½c. for both long and demand—to 4.88½@4.90. On Wednesday free offerings by the syndicate depressed the actual market for sight drafts to 4.89, and the posted figures for that class of bills were also lowered to 4.89½. There was some increase in the offerings of commercial bills toward the end of the week, and stock bills created a weaker market on Friday.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Aug. 1.	Aug. 3.	Aug. 4.	Aug. 5.	Aug. 6.	Aug. 7.
4.88 @ 4.89½	4.88 @ 4.89½	4.88½ @ 4.90	4.88½ @ 4.89½	4.88½ @ 4.89½	4.88½ @ 4.89½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.89 @ 4.89	4.89 @ 4.89	4.89 @ 4.89¼	4.89 @ 4.89	4.89 @ 4.89	4.88¾ @ 4.89

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.88 @ 4.88	4.87¾ @ 4.88	4.88 @ 4.88¼	4.88 @ 4.88	4.88 @ 4.88	4.87¾ @ 4.88

Closing quotations on Friday for other classes of bills were: Cables, 4.89@4.89¼; commercial bills, 4.87¼@4.87½; francs, 5.16¼@5.14⅜; reichsmarks, 95½@96.

The Bank of England discount rate remains at 2 per cent. The bank this week lost £736,000 specie, and its proportion of reserve fell from 58.54 per cent. to 59.38 per cent. In the London open market discount is 11/16@¾ per cent. and call money ½ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending July 31, 1896:

	1896.	1895.
Dry goods	$2,310,655	$3,150,726
General merchandise	6,215,006	6,096,108
Totals for the week	$8,525,661	$9,246,834
Previously reported	276,287,269	300,180,543
Since January 1	$284,812,930	$309,427,377

The exports (exclusive of specie) from New York to foreign ports for the week ending August 4 were $1,398,220 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$7,381,926	$6,569,968
Previously reported	221,197,216	198,058,019
Since January 1	$228,579,142	$204,627,987

THE STOCK MARKETS.

The New York Stock Market.

During the past week speculation in the New York market has shown renewed bearish tendencies, culminating on Friday in a severe liquidation and general demoralization of prices. The failure of prominent Chicago operators and the collapse of a local boom, with the closing of the Stock Exchange there, had no immediate connection with Wall street. Nevertheless, the incident created fears that injury might be more widespread than is said to be the case, and it may be observed, indeed, that the hardening of the call loan market here is attributed mainly to complications created by the Chicago troubles. At the close of the week, however, the rise of call loans to 6@7 per cent. and the difficulty in obtaining time loans were effective in creating liquidation. The market here took the matter calmly, in the first instance, though its effects have been to still further limit the amount of public interest and to embolden the bear operators who have been engaged in the work of depressing prices. This latter process has gone on with considerable success, and resulted in materially lower quotations for a number of stocks. The disturbance at Chicago, the expectation of higher money, the political situation in its relation to the silver agitation, and the fact that railroad earnings are becoming decidedly unsatisfactory, were all used by the bear party with more or less effect upon prices. The ease, however, with which such interests have produced an impression upon the share list is mainly due to the fact that the most influential people in the street are not giving any apparent protection to their stock specialties and that the public is taking no part whatever in the market, the declines in prices attracting no buying whatever except that traded by covering of short contracts of the purchases for London account. The latter market, however, has not exhibited the same degree of bullish feeling in regard to American securities that it showed for some weeks past. It has become plain that the buying from that quarter was professional, that the leading financial authorities there opposed a bull speculation in Americans at this time, and that the British public has been and continues totally indifferent. According to some cabled accounts, the "Kaffir" and other operators who formed the purchasers of such a large amount of American stocks within the past six weeks have become somewhat overloaded with them, and, in view of the uncertainty and long wait that is before them, are desirous of selling. This statement is not altogether of the kind to be accepted without scrutiny, but the facts are that there has been selling for London account on advances in our market, and an absence of that eager buying which distinguished its participation for some weeks past. This has been not the least of the influences that have encouraged bear selling and given the market for the week such an unsteady and depressed appearance. On Friday London was, however, a buyer on the breaks in our stock list.

The declines in the market have been so general and striking that it is difficult to select particular instances of the current tendencies. Nor were there many individual factors in the various stocks. One of the most noteworthy examples was Burlington, which fell from 66 on last Saturday to 53 on Friday of this week. Reports have been circulated that the next quarterly dividend would be at a reduced rate. The stock, it is true, rallied to 57, but the influences that brought about its decline were also displayed in the fall of St. Paul from 69⅛ to 60½ and of Rock Island from 56¼ to 49½. Manhattan was another specially weak feature, going from 88 to 78, its decline being helped along by the fact that the company's proposals for an extension of its lines in New York was rejected by the Rapid Transit Commission. Sugar, of course, took part in the general downward movement, falling from 106 to 95½ in the face of an advancing market for the product of the refineries. The breaks in a number of the specialties were also of a noteworthy character, Friday's declines in particular being on small sales, with large variations between sales.

Boston Stock Market.

The tone of the market has been quiet and the general trend of values is lower. Atchison has declined ⅞ on moderate sales, while Chicago, Burlington & Quincy has sold down 6 points, with fair trading, and other railroad shares show a decline of 1@2 points. Coppers have ruled easier, with a decline of 3¾ points on Boston & Montana. Bell Telephone has declined 1 point, while Sugar has been forced down 2⅝ points, with liberal trading. Bay State Gas has been fairly attractive and closes ¾ point lower.

Prices of principal shares, with volume of transactions, have been as follows:

TRADE FEATURES.

DULLNESS IN ALL LINES, WITH SLOW COLLECTIONS AND RESTRICTED INDUSTRIAL OUTPUT.

Larger Eastern Cities.

Boston, August 7.—The tone of trade is dull in all departments, with a general lack of life noticeable. The money market appears stronger, but trade is quiet. Outside of call money rates are merely nominal and governed entirely by circumstances. On call, quotations are nominal at 4@4½ per cent., while the banks are taking care of their customers to a fair extent at 5@7 per cent. There is very little market for commercial paper. The boot and shoe trade is quiet, but the factories are yet quite busy on previous orders. Samples for spring goods in women's light wear are being sold. Leather is dull, but the market is quoted about steady. Hides are dull and prices have declined a trifle more.

Providence, August 7.—A meeting of the manufacturers of cotton yarns representing different sections of the northern states has been held in this city to take action looking towards curtailment of production. A resolution was adopted recommending a curtailment of at least 50 per cent. during August.

Philadelphia, August 7.—Wool continues very dull; very little is selling; prices are nominal, but the market is steady. A number of mills are closed for want of orders. A slight upward movement is noted in morocco and leather, and a better demand at this time than for the past two months. Iron and coal show no improvement and both are exceedingly dull.

Pittsburgh, August 7.—A slight increase is noted in the volume of business this week, but jobbers say trade is not what it should be at this time. Some orders are being received from country merchants for fall delivery, but they are small, and the trade generally show a disposition to be conservative in buying. No change is noted in the local iron market since last week. Business is dull and few sales are reported. The market is firm at present quotations, which is attributed to the action taken by the members of the billet pool.

Baltimore, August 7.—The trade report an improvement in business the past week. Orders are coming in freely. Quite a number of southern buyers in the city. Collections fairly good.

West and Northwest.

Cincinnati, August 7.—Business continues dull. Collections are easy.

Cleveland, August 7.—Commercial conditions have undergone no noteworthy changes during the week. General merchandise jobbing trade is quiet and along very conservative lines. The iron and iron ore markets continue unprecedentedly dull.

Detroit, August 7.—The volume of business in all lines continues light. Collections are unsatisfactory. Money is in fair supply; demand light.

Chicago, August 7.—There has been no change in the general business situation. It is too early for the fall trade to assume large proportions, and sales are in small lots, buyers, especially of dry goods, being unusually cautious, owing to the uncertainty in financial affairs. Considering the spotted condition of the crops in the west and the low prices for grain, there is a fair business being transacted. In a few lines, particularly clothing and shoes, sales are not up to last year. Steel manufacturers report the receipt of numerous inquiries, but have closed few new trades. Rail- and rods are receiving the most attention. Pig iron makers in the north are piling up stocks and holding for buyers to come in, as the big consumers are reducing their stocks and are expected to want supplies in the near future. Some inquiries are received, but no large sales closed. The feeling is easy, and large lots can be had at concessions. In other lines dullness prevails. Fruits are abundant and lower, and poultry, butter and potatoes higher. Wool receipts, 1,996,017 pounds.

Louisville, August 7.—Conditions of general business have a lifeless tendency. The movement among the Kentucky distillers to suspend the production of whisky for eighteen months has been consummated. No auction sales of leaf tobacco during the week beginning August 10. Collections are reasonably good.

St. Louis, August 7.—The general situation is nominally unchanged, and until conditions are steadier all classes of trade will undoubtedly make purchases in a small way only. Collections continue very slow, with a consequent contraction in credits. The extremely warm weather has its effect on business, but politics are chiefly responsible for the poor showing all around. Inquiries are largely for the purpose of keeping in touch with conditions. Iron of all kinds is dull. Leather is firm and wool quiet, with little disposition to trade. The movement of such leading commodities as dry goods, hats and caps, boots and shoes and groceries is only fair.

Kansas City, August 7.—No improvement is noted in jobbing trade over last week. Collections are slow. Packing houses report a scarcity of orders, and many of their employees are laid off.

Milwaukee, August 7.—Business continues upon very conservative lines and no new features are apparent. Collections continue slow.

St. Paul, August 7.—There is a fairly good demand for seasonable goods. Increased sales are looked for when the one-cent rate of fare made on account of the Grand Army encampment goes into effect September 1, as a large number of country buyers are expected to visit the city at that time. But owing to the threatened change in the national financial policy, there is a disposition to restrict credits except to parties of undoubted responsibility. Collections, on the whole, show a falling off.

Minneapolis, August 7.—In nearly all lines present shipments are equal in volume to a year ago, and advance orders for future shipments, if seasonable goods, are nearly as large. This applies to merchandise. Flour is active and lumber quiet.

Duluth, August 7.—General trade is featureless, and there is no disposition to buy in excess of absolute needs. Owing to the exceedingly low rate by water, lumber is making east more freely. In some cases, however, shipments are more to eastern distributing centers, to hold for future sales.

Omaha, August 7.—Business shows but little improvement over reports of last week. Country merchants are buying light and only for their immediate needs. Collections this week have been above the average.

Sioux Falls, August 7.—No change is noted in general trade features. Wholesalers continue to report small orders and conservatism. Retail trade is very quiet.

Southern Cities.

Charleston, August 7.—There is no change in the general trade. Cotton is beginning to come in. Crops in certain sections have been damaged by excessively hot weather. Trade reports outlook for business this fall good.

Savannah, August 7.—Retail trade, considering the hot spell, is fair, with average collections. Wholesale trade and collections are good, equal to the corresponding period last year. Spirits and rosin are about the same. Demand is strong. Prices very low and market firm. Cotton is beginning to move.

Atlanta, August 7.—Trade is quiet, with collections fair.

Augusta, August 7.—Wholesalers report some improvement in business, though collections are slow. All dealers appear sanguine of a good fall trade.

Jacksonville, August 7.—The long hot spell has done immense damage to crops, and few vegetables are in market. Collections are very dull.

Chattanooga, August 7.—Trade is quiet. There has been no change since last week.

Nashville, August 7.—Summer dullness prevails and the output of goods is limited. The recent hot weather was preceded by plentiful rain, and there has not been much damage in this section.

Memphis, August 7.—General trade shows no material change. Collections are fair.

New Orleans, August 7.—The volume of country orders is only fair. Crop reports continue unfavorable on cotton. Market has ruled very active, with sharp advances. Receipts of new rice met with prompt sale. Sugar is in fair demand. Crop reports on sugar are favorable. The suspension and voluntary liquidation of one small local depository is considered unimportant. Money is in good demand. The market is quiet but firm. The sugar bounty payments are confidently expected here early next week, which will no doubt provide an easy money market.

Galveston, August 7.—The early movement of cotton is creating a favorable impression among merchants in all lines. Business continues to improve.

Pacific Coast.

San Francisco, August 7.—No changes are reported in commercial markets. General business continues dull. Grain freights are nominal, grain bags weak. Fruits and produce are dull.

Portland, August 7.—It is pretty well understood that there will be no movement to speak of in Oregon wool until after the election. Wheat, however, will begin to be turned into cash in a very short time. The agitation over the money question has caused the money market to become very stringent, banks and capitalists preferring to be sure about legislation before making loans. Business in general shows no change. Collections are a little slow.

Seattle, August 7.—General trade in July exceeded that of June. For August groceries have not opened up as well as expected, but provisions, hardware and flour are good. General exports for July are valued at $43,192.

Tacoma, August 7.—Lumbermen report eastern orders light. Local business shows no improvement over the general dullness of last month. Collections are very slow, but the new wheat crop will soon be moving and the situation much improved.

Canada.

Toronto, August 7.—Wholesale trade is quiet and featureless this week. Orders for autumn goods are coming in slowly, but prospects are considered fairly satisfactory.

Montreal, August 7.—There is practically no improvement in business. Wholesale trade report orders light and for sorting-up purposes. Payments due on the 4th are reported below the average. Considerable renewals are being asked. Quebec city advices report business, with the exception of shoe manufacturers, as quiet and collections poor. Crop prospects in this district are fair, although hay is only half of the former yield.

Halifax, August 7.—The volume of business for the week has been light. Sales of provisions, however, are brisk; collections fairly satisfactory. The fish market, on the whole, is in a fairly good condition, and the crops all over the province are looking well. New Brunswick crop reports are also favorable. St. John reports large shipments of lumber, very little activity in general business, and coastwise freights very dull. Advices from the Newfoundland fisheries are not very encouraging so far.

Dry Goods.

The movement in dry goods continues slow, with conditions unfavorable. Cotton fabrics meet with slow sale at first hands and prices are low. The curtailment in production continues, many mills being closed down. Raw cotton has shown a sharp advance, but this does not affect the market, as goods are selling without regard to cost of production. Printed fabrics for fall are attracting some attention, but sales rule slow. Ginghams are quiet and the market featureless. Dress woolens continue dull and agents report little business at the mills. Jobbers are having only a very moderate trade. Men's-wear woolens continue slow, although small orders for some of the cheaper cost cheviots for spring are being booked.

Wool.

The market shows no improvement in tone or condition, the demand for supplies being very meager and confined to actual needs. Manufacturers are taking very few orders for woolens, and they will not buy wool except to make up goods sold. Meantime the stock of wool on the market is large, and, with almost nothing selling, the outlook is very unfavorable. Wools are nominally quoted at about the same range of prices, but there is not enough doing at present to establish quotations. Territory wools are in large stock, and are quoted on the scoured basis of 30c. down as to quality. Fleeces are in moderate supply, the strong prices asked in the country on this clip preventing shipments from coming forward. Foreign wools are quiet, but prices are held firm.

EVERYTHING DOWN BUT WAGES.

The *American Manufacturer* says: "In the discussion of present financial and industrial conditions there is great deal being said about constantly lowering prices and the way in which they affect some classes, particularly the farmer. Statistics show that prices of all products have been steadily trending downward for generations. But taking a period of fifty years, which brings us within the memory of those now living, the records show that prices have been getting lower. Everything used in daily life has fallen in price. Food products are lower, iron is lower, and prices of manufactured articles of all kinds, whether of iron, steel, copper, wood or leather, have had a decided fall. But there is one thing that has not followed the general tendency. While all other prices have sought lower levels, the price of labor has been steadily sustained. Throughout the period mentioned, wages have not only increased in amount, but they have also increased in purchasing power.

"This is due mainly to better methods and improved machinery. With the means now at his command the workman can turn out a much greater product than he could fifty years ago, hence his wages are higher. As illustrating this fact, take pig-iron manufacture. Fifty years ago the average furnace could turn out 125 tons of pig iron per week. With a very few more men, but with the vastly improved facilities a furnace to-day will turn out at least 1,500 tons per week. And so it runs all through the industrial world, for in all lines improvements have made labor more productive, and left more for the wages fund.

"This applies to the farmer equally with all labor, because the farmer is the greatest of the world's workers. And yet there is one point which the farmer too often fails to understand. In considering the lowering prices of his products he forgets several other very important facts. By the introduction of machinery his labor has been made very much more productive than it was fifty years ago. And in common with all other consumers, the cost of his living has been reduced. In argument the farmer often brings forward the fact that the product of an acre of ground can be only so much. But it is equally true that machinery enables the farmer to cultivate a greater number of acres, and greatly increase the total of his product. And with the fertilizers of to-day the output of the acre is increased. Consequently, while the farmer may not get as high prices as he once did, he has a great deal more to sell than he had half a century ago.

"But it is in something above material comforts that the farmer is much better off to-day than he was generations ago. It is in a higher, broader life. It is in the ability to surround himself with ennobling influences and means of mental culture which were beyond the reach of the farmer fifty years ago. And this is right. It is just as it should be. If there is any mortal who deserves the best things of this life, both material and intellectual, it is the farmer. And anyone who candidly examines the facts shown by statistics must admit that the farmer with all other workers is now getting more of his just dues than he got in any previous age."

RESTRICTED WHISKY OUTPUT.

A special dispatch to the St. Louis *Globe-Democrat* from Louisville says: "All but six of Kentucky's 300 distilleries closed their doors to-day, and for a period of eighteen months not a drop of the liquor which has made the old commonwealth famous will be manufactured. At the expiration of the period of suspension limited production will be begun, but it will be at least three and a half years thereafter before a drink of new Kentucky bourbon will be put on the market. Thus the suspension of operations, which goes into effect to-day for a period of eighteen months, really means that no raw Kentucky whisky is to be marketed for four or four and a half years.

"The suspension of the distilleries was brought about by overproduction and the consequent determined effort on the part of the Kentucky distillers to create a market for good whisky, and at the same time to reduce the amount in bond to a reasonable figure. It is a step never before resorted to in the history of the country, and the outcome will be watched with interest all over America.

"For the distillers of Kentucky to shut down

sounds queer. It is as though coals had ceased to come from Newcastle. The situation is so unique; it has so many interesting aspects; it will be so far reaching in its effects as to require more than a passing note. A glance at the past, present and future of the interests of Kentucky, as exemplified in her distilleries, one of the bulwarks of her commercial strength, will prove interesting.

"Only a few years ago the distillers of this state were in clover as high as grew the golden grain they took to their stills and converted into that ambrosial nectar known the world over as Kentucky whisky. During the past five years they have not been so prosperous. Increase in taxation from 90c. to $1.10 per gallon is one cause of today's depressed market, while another cause is the fact that in 1893 the production of whisky in Kentucky was vastly overdone; so much overdone, in fact, that in that year alone 45,000,000 gallons were sent from the stills, although consumption had even then began to dwindle from 30,000,000 to less than 20,000,000 gallons annually. But it has been since 1893 that matters have come to such a crisis that many distillers just prior to the meeting in this city, at which suspension was agreed upon, declared that another year such as the last one would wreck nearly every man in the state who handled whisky on a large scale. Since 1893 the surplus of whisky stored in bonded warehouses of the state increased so rapidly that fine Kentucky whisky became almost a drug on the market; competition, in order to get a sale for a product for which there was a continually decreasing demand, became so great that prices were cut to the bone; values went away below par, and in many cases the distiller could not get the cost of production and carriage for his goods. More than that, the confidence of the business men, not only in Kentucky, but in all parts of the world where Kentucky whiskies had been as staple as wheat, was shaken; they feared to buy on a declining market with the outlook very blue, and few had courage to buy whisky and have it stored in bond, as had been the custom with the big dealers from that time of prosperity before the war.

"This was, briefly stated, the condition of affairs at the beginning of 1896. Several efforts were made to get concerted action on the part of the distillers, but it was not effective until recently at a meeting in this city all agreed to close their distilleries for a period of eighteen months, beginning August 1. There are now in the bonded warehouses of the state 88,000,000 gallons of spirits of all kinds, so that there need be no fear of an inability to secure the genuine old Kentucky article even if no whisky were to be made in the state for four years. The amount of whisky now in bond exceeds that of any other year, and yet prices are down to such a point that distillers and dealers say they have ceased to make a dollar. The consumption of Kentucky whisky has fallen from 30,000,000 to barely 20,000,000 gallons annually; oversupply, coupled with greatly diminished demand, has forced competition to so keen a point that maintenance of value of the pure old Kentucky article was impossible. So, rather than see the product of the proud old state go begging for a song, the distillers have determined to suspend operations until there is a demand, and until the parched throat of the drinking public is forced to call for the golden extract from Kentucky's tasseled fields.

"That the retail price of whisky will be raised on account of suspension is not at all probable, as the very fact that there are 88,000,000 gallons of the Kentucky product in bond will serve to keep down any panic among the believers in the drink of the old commonwealth. During the past two years the annual consumption of Kentucky whisky was only 20,000,000 gallons, so there is hardly any likelihood of a drouth or of a thirst that cannot be quenched. True, the retailer will be forced to pay a trifle more for his Kentucky whisky, probably from 3c. to 4c. a gallon, but this he will do uncomplainingly, as in the end it will amount to but a trifle per drink."

CANNED GOODS IN MIDDLE STATES.

The *American Agriculturist* says: "While too early to expect any real activity, there is a little less lifelessness in the situation. Bearing light on the subject, a special bulletin sent out by Secretary Julius S. Edwards, of the Western Packers' Canned Goods Association, indicates a decrease in sweet corn acreage of about a third in the territory covered, and in tomatoes of 5 per cent. compared with last year. He estimates that in the central and middle states, from Ohio westward to Kansas, inclusive, there were on hand July 1 121,560 cases 1895 corn and 121,625 cases of tomatoes.

"Reports show that in nine states 123 factories had sold tomatoes 'futures' up to July 1, amounting to 87,165 cases, corn 89,050 and peas 148,125 cases. With the exception of peas these figures show a decided falling off in sales of 'futures' compared with previous years. Three years ago 89 factories reported July 1 that they had sold for future delivery 1,163,000 cases of corn. The following table compiled by Secretary Edwards shows the estimated pack (in cases) of 1896 in the states named:

ESTIMATED PACK BY CASES, WITH COMPARISONS.

	Peas		Corn		Tomatoes

PRODUCTION OF SUMATRA TOBACCO.

The London *Journal of the Society of Arts* says: "The United States consul-general at Singapore, in his last report, calls attention to the great increase that has taken place in the production of Sumatra tobacco, and the high price it commands on account of its superiority, especially for wrapping purposes, and he gives some interesting particulars of the origin and growth of the industry. It was in the year 1862 that an Arab drew the attention of a commercial house in Batavia to the district of Deli, on the east coast of Sumatra, a country where pepper and tobacco were being produced, and where a good market could be found for European goods. This led to a commercial expedition to Deli in March, 1863, which expedition was joined by a tobacco planter from Java, with the special object of inspecting the soil in Deli, and seeing whether it was suitable for tobacco cultivation. The result of this expedition was that the planter in question obtained a firm footing in Deli, and being provided with the necessary funds by a firm in Rotterdam, he sent his first 50 bales to Europe in 1865, and, in 1866, 189 bales. This tobacco attracted the attention of experts, and it was decided by a group of financiers in the Netherlands to embark capital in the enterprise. This was done, and a company was established in November, 1869, with a capital of 300,000 guilders. This is how the Deli Maatschappy was started—the pioneer tobacco planters in Deli. The tobacco crop from the east coast of Sumatra, which, since 1869, had been gradually increasing, reached a total of over 236,000 bales, of 174 pounds each, in 1890. This was too large a crop for the consumption, for heavy loss was sustained by planters, many of whom, working with slender means, had to close their estates, and even the Deli Maatschappy suffered a loss that year. In 1891 the crop was about 10,000 bales less, and prices improved, but although the big companies made comparatively small profits, many private planters had to close. This reduced the crop of 1892 to about 150,000 bales, which brought good prices, and evidently stimulated the production, for the crop of 1893 rose to 160,000 bales, and the 1894 crop was estimated at 200,000 bales or more. Consul-General Pratt says that, as far as he has been able to gather from the means at his disposal, there are at present on the east coast of Sumatra 26 public companies and about 25 private planters engaged in tobacco cultivation. As to the method of cultivation, the planting is done by Chinese coolies, imported chiefly direct from China. When the number from China proves insufficient, Chinese are engaged in the Straits Settlements on contract. Each Chinese coolie gets a field of three-fourths of a bouw (1 bouw = 1¾ acres). He has to plant tobacco on the field, and he gets payment for his labor when the tobacco is ripe and delivered by him to his master. When he delivers his tobacco, the coolie is paid per 1,000 plants, according to quality, from $1 to $8. During the planting season, however, he receives an advance equivalent to about £1 sterling a month. When the tobacco is in the fermenting sheds, the Chinese work in the sheds on contract until the planting season begins again. They are chiefly employed at sorting tobacco and receive about a halfpenny for each bundle of 35 to 40 leaves. Besides Chinese other coolies are employed, namely, Japanese, who, at the beginning, receive about 25s. a month, and the women 12s. per month. They are employed in roadmaking, shed-building, and junglecutting, or clearing work. Klings are also found in Deli, but they are comparatively few, and those who are there work as cattle-keepers and roadmakers, and earn from 25s. to 37s. 6d. per month. Plowing is paid for by the month. With a plow and two pairs of buffaloes, one-third of a field, or one-fourth of a bouw, can be plowed per day. A Japanese or Kling gets for this about 33s. a month, and for looking after the buffaloes, about 8s. 6d."

RAILROADS LOSING SUBURBAN BUSINESS.

The *Street Railway Journal* says: "In view of the amount of suburban passenger travel being taken away from the railroads in different parts of the country by electric lines, the table compiled by the *Street Railway Journal* will be of interest. Extraordinarily low rates per mile are indicated by the distance for which a passenger may ride for a five-cent fare, by the use of transfers, on some of the street railways:

City.	*Track mileage.*	*Miles for 5 cents.*	*Rates per mile.*
New York	558	12.5	.0040
Chicago	760	15	.0033
Philadelphia	462	11.75	.0043
Brooklyn	393	18	.0028
Boston	275	9.9	.0051
St. Louis	335	15	.0033
Jersey City-Newark	175	8.25	.0060
Cincinnati	263	10	.0050
Milwaukee	159	9	.0056
Denver	212	11.5	.0043

"Brooklyn appears to take the palm by giving an electric railway ride of eighteen miles for five cents, but Chicago beats this in the case of the Northwestern road, which carries passengers a straight trip of twenty-one miles for a nickel, and goes to the expense of printing, selling, collecting and auditing a ticket for each trip also. But, taking the average distance traveled, street railway rates are not so remarkably low compared with those of steam roads, for an immense number of their fares are received for short trips of one, two or three miles, for which five cents is a profitable rate, and passengers are constantly leaving and arriving on every run through a populous city. On the long runs the business would be done at a heavy loss were it not for the large return from the short trips."

SKILL IN ESTIMATING ENGINEERING WORK.

The *Army and Navy Journal* says: "The skill shown by the late General Casey, chief of army engineers, in estimating in advance the cost of engineering will be better appreciated when we recall the errors made by others in similar calculations. The estimated cost of the Manchester ship canal was $28,750,000. Nearly $80,000,000 was spent before the canal was ready for business. The international commission reported in 1856 that the cost of digging the Suez Canal would certainly not exceed $40,000,000. It had cost $94,500,000, to say nothing of Egypt's gratuitous building of lighthouses, dredging of the harbors, advance of money without interest, and gift of forced labor, the whole amounting to $20,000,000 more. Engineers spent a year collecting data for their report on the Congo railroad, which they asserted could be built for $5,000,000. They now say that the total cost will be from $12,000,000 to $13,000,000. The egregious underestimate of the cost of the Panama Canal nearly swamped that enterprise before wholesale stealing completed the ruin. The forts on the Meuse river, estimated at $4,500,000, cost $16,000,000; the Corinth Canal cost $12,000,000 instead of the estimated $6,000,000; a harbor and a railroad on the island of Reunion cost $13,500,000 instead of $6,800,000; the Senegal railroad, which was to be completed for $2,600,000, absorbed $9,000,000, and the Langson railroad in Tonkin, which was to open a conquered province for an expenditure of $500,000, bled the French treasury to the tune of $4,367,790."

REASONS FOR THE SIBERIAN RAILWAY.

"Siberia is a Russian Canada, larger and more populous, and, like Canada, it has a great future before it," says the *Fortnightly Review*. "It is very rich in gold, while there are whole hills of graphite (black lead) and lapis lazuli; coal can be picked up on the very road near Nerchinsk; there is silver in the same district, and there are rich mines of iron near Nikolaefsk. Siberia, like Canada, is rich in fish. On the Amur river 200,000 puds of the kita fish have been caught within a few weeks in August, when the fish ascend the rivers; the pud (pood) being 40 pounds, that means 8,000,000 pounds of fish. In the Khabarofka museum is a stuffed kaluga fish weighing 30 puds, or 1,200 pounds, caught in the Amur. The Russians have been struck by the fact that 'the prosperity of Canada and its productive activity have grown and continue to grow with a rapidity which appears to us (Russians) miraculous, and by us inimitable, just from the date of the completion of the Canadian Pacific Railway from the Pacific to the Atlantic ocean.' In 1889 they deputed two engineers to observe the Canadian line and its conditions and results. Attention in Russia was drawn to the facts that Canada, a country then of 4,000,000 people, had, by its own resources, without any pecuniary help from outside, connected the two oceans by an iron road 4,500 versts (3,000 miles) long, over very difficult and expensive ground for building, in the short time of four years; that the energetic population of Canada, 3,600,000 in 1871, and only increased to 4,300,000 in 1881, reached 5,000,000 a year or two after the first through train passed Winnipeg in 1886; that the quantity of grain carried in Canada had increased from 303,571 tons in 1886 to 500,000 tons in 1888; that in places without population there had arisen seven new towns, such as Vancouver, founded only in 1886, and holding 9,000 inhabitants in 1891. It was made known to Russia that 'the cost of the Siberian Railway should not be even 65 per cent. of the cost of the Canadian Pacific.'"

CONSUMPTION OF PETROLEUM FOR FUEL.

The *Shipping and Commercial List* says: "No official figures on the consumption of petroleum for fuel have been published since the statement presented in these columns on January 17, 1894. Then it was shown that the Ohio and Indiana oil fields had furnished for fuel purposes 7,000,000 barrels crude in 1890, a trifle over 9,500,000 in 1891, about 11,000,000 in 1892, and 9,000,000 in 1893. The consumption dropped to 8,000,000 barrels in 1894, and last year the total sales of fuel oil were 7,600,000 barrels. Since January 1 the movement of crude for that purpose has continued at about the same ratio. The decline is owing to reduced production and higher prices. In 1892, when consumption was at its highest point and producers were pushing the use of oil for fuel, the cost of Lima oil at the wells was 15c. per barrel, in comparison with 72c. as the average last year. The decreased yield of Pennsylvania crude compelled refiners to give more consideration to the so-called Lima oil. By improved processes they brought the Ohio refined to perfection, and it is now as acceptable for export as any other grade of petroleum. For that reason much less crude is used for fuel, and unless production should largely increase, the volume of business in fuel oil will continue to decrease so far as the Ohio and Indiana fields are concerned.

"A different story comes from California, where the production last year was 800,000 barrels, against 400,000 in 1894, half of which was used for fuel and the balance refined. Developments are rapidly increasing the oil wealth of that state, and until the oil is otherwise used great efforts are being made to push it forward as a fuel. It is now being used in locomotives with success, this feature being taken from Russia. The comparatively new fuel is meeting with favor on the Pacific coast, as it cheapens the cost materially to many industries and prevents a surplus."

LITTLE FARMS IN JAPAN.

The London *Times* says: "Japan, and not France or Belgium, would appear to be the land of petite culture. According to a recent American bulletin a couple of acres is considered a large tract for farming purposes. Most of the farms are smaller, and on a little plot a surprising variety of crops is cultivated—a few square feet of wheat, barley, maize and millet; a plot of beans perhaps ten feet wide by twenty feet long, a similar area of potatoes and peas, and a patch of onions 'about as big as a grave;' beetroot, lettuce, turnips, sweet potatoes and other crops occupy the rest of the area. The farmer examines his growing crops every morning, just as an engineer inspects his machinery, and if anything is wrong he puts it right. If a weed appears in the bean patch he pulls it up; if a hill of potatoes or anything else fails it is at once replanted. When he cuts down a tree he always plants another. As soon as one crop is harvested the soil is worked over, manured, and forthwith resown to another crop. It is estimated that nine-tenths of the agricultural land of Japan are devoted to rice, and as this is a crop requiring much water the paddy-fields are banked up into terraces, one above the other, and divided off into small plots twenty-five feet or thirty feet square, with ridges of earth between them to prevent the water from flowing away when they are flooded. All farming lands are irrigated by a system that is a thousand years old. Some of the ditches are walled up with bamboo wicker-work and some with tiles and stone. According to official statistics, 11,400,000 men and 10,948,000 women—nearly half the total population of Japan—are engaged in agriculture. Silk and tea, the two chief exports of the country, are raised almost by the work of women."

THE FARMER AND HIS PRICES.

The Chattanooga *Tradesman* says: "Official reports of the government show the following range of cotton crops and prices:

	Pounds, gross weight.	*Farm value, cents per pound.*
1893	3,352,658,458	8.00
1894	3,769,381,478	7.00
1895	5,036,964,409	5.21

"Increase of crop in three years, 50 per cent.; fall in price at the baling press, 35 per cent. So there was, after all, a liberal gain to the producer, for it cost him only a trifle more to grow and gather and bale the crop of 1895 than it cost to produce and make ready for market the smaller crop of 1893. Of course it is not surprising that prices fell. We need no occult philosophy of currency to tell why they fell. Cotton growers need go no farther than the crop returns to ascertain why prices are higher or lower at different times. The cotton grower who imagines that unlimited silver money or a flood of fiat paper money, or any form of debased, 'cheap' money, would do him any permanent good, is badly fooled. The one thing that will help the cotton planter is diversification, so as to always have some crop that would bring a good price. Supplement diversity with intensive farming and you can live an independent life, educate your families, and be free of many of the toils and troubles of city living. A good farmer will aim always to raise his own bread and meat and fruit and vegetables. If he understands his business right he will not buy much from his grocer besides sugar, spices, salt and such like side supplies, for he will get the substantials from his smokehouse, cellar and poultry lot.

"Such a farmer will not go yawping up and down the land about how he has been ruined by the crime of 1873. Such a farmer don't spend his Saturdays whittling sticks in front of the village store. He don't roost on the fence, under an umbrella, with one eye on a bottle of whisky among the grass below him. He leads his boys in the field; says come, not go, to his help—in a word, he works while he thinks. He takes one or more of the leading agricultural papers, his home papers; if near a city, he takes a daily. He buys each year a few good books for his sons and daughters and for himself and wife to read. He is as fit as the best to sit in the legislature, and he often does sit there. We know more than one such farmer who is a bank director, and two who are efficient bank presidents. They are apt to be sturdy, manly partisans, but they do not fool away much time on party caucuses, conventions and political intrigue.

"In a word, a really successful farmer, whether he raises cotton or corn as his main crop, is a business man who amounts to something in his community, and who has no fear of meeting the best of them from town, or would hesitate to entertain his member of Congress or the governor of his state in hearty, homely rural style.

"And he is one of the happiest, most independent and self-respecting of citizens. He would scorn the shedding over him of crocodile tears by political shysters, and feel like kicking them off his premises if they told him he was a poor, miserable, ground-down serf of the soil and slave of the city plutocrat. The really intelligent farmer knows better than that, knows that he and his fellows 'feed the world,' and that they have but to mind their business with diligence and judgment, to have the world pay good prices for the surplus they grow. He knows what raises and what lowers the prices of farm products, and he scorns those who try to pack the results of their own stupidity, laziness and crookedness upon the government.

"The country needs a lot more of such husbandmen as we here briefly describe. When he becomes numerous enough to educate the whole fraternity into the ways of industry, frugality, morality, and teach the farmers at large the dignity and real nobility of their calling, then the millenium, we think, will be within calling distance."

THE GOLD FEVER IN CAYENNE.

The British consul in French Guiana, in a report on the trade of that colony, "gives a description of the effect on the people there of the discovery of gold in the territory in dispute between France and Brazil. The district in question is called Carsevene, and one Demba was the discoverer of the existence of gold there. He went without exciting suspicion; but when his provisions ran out he sent to Cayenne for more, and incautiously wrote to his correspondent that he had secured 200 kilos of gold, and would not return until he had got 100 kilos more. The news soon spread through the town, which has about 11,000 inhabitants, of whom 7,000 were soon on their way to Carsevene. The only people who did not go were those tied to the town by their position, those who were too old to bear the hardships, and the women and children. 'Every one who could run abandoned everything; commercial enterprises were left at a standstill; clerks left their offices; even government officials and the editor of the only privately-published newspaper flocked to the land of gold.' The news was carried by the monthly steamer to the West Indies, and the gold seekers soon flocked in from there. Carsevene had no administration or authority, and accordingly the law of the strongest prevailed. The mortality was abnormal, and as the fields were twelve miles from the landing place, it was very difficult to get transport for the sick. Each miner had just as much land as he could hold by brute force."

TO THE HOLDERS OF

Reorganization Certificates or Receipts for Preferred and Common Stock

OF THE

NORTHERN PACIFIC RAILROAD CO.,

Deposited under the Plan and Agreement of March 16, 1896.

NEW YORK, PHILADELPHIA AND BERLIN,
July 23, 1896.

The sale of the Northern Pacific Railroad Company under decree of foreclosure of the Circuit Court of the United States having been ordered to take place on July 25th, 1896, notice is hereby given that, pursuant to the provisions of said Plan and Agreement, the third instalment, viz.:

$4.00 per share in respect of Preferred Stock, and
$5.00 per share in respect of Common Stock,

being the balance of the cash payments specified in the Plan, is hereby called for, and is payable at either of our offices on August 14th, 1896, and all holders of such certificates or receipts are notified to make such payment on or before that date. Their reorganization certificates or receipts must be presented so that such payment may be endorsed thereon.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

INSURANCE.

1850.——1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, AUGUST 15, 1896.

It may be questioned whether Mr. Hanna, the principal director of the Republican campaign, entertains quite the view of the nature of the contest under way which will enable himself and his colleagues to do the greatest service on the side of sound money, that is, if he be correctly reported. In an interview just made public he is quoted as saying that the party has had the money issue forced upon it, and that it is going to meet it; that it was brought about by a combination of circumstances; that for the next thirty days the fight will be against free coinage: "Then the people of the entire nation will remember that under Republican rule four years ago, with a gold standard, prices were high, and that now, with the same gold standard, but under a Democratic rule, prices are low. The tariff will then take its proper place in the campaign." The wisest and most earnest friends of sound money are in favor of subordinating every other issue to that until the end of the campaign, and it should not be forgotten that it is seldom that the strategy of a campaign can be changed during its progress without disastrous results.

Two important contributions to the discussion of the question at issue in the campaign will be made at meetings in New York city in the course of next week. One of these will be a speech by Mr. W. Bourke Cockran, of New York, at Madison Square Garden, on Tuesday night, under the auspices of the Honest Money League of America, and the other will be an address by ex-President Harrison on Saturday night to a Republican mass meeting in Carnegie Hall. Ex-President Harrison will naturally attract a large gathering. His eminence in the councils of his party and his skill as a political debater will bring to the meeting at which he will speak a gathering representing not only the full strength of the Republican party following, but also men of generally opposed political beliefs, but who, for the purposes of the present campaign, will sink all differences in an earnest effort to prevent the election of a free coinage President. General Harrison's discussion of the issues of the campaign should be an enlightening one, for none of the leaders of the Republican party during the period preliminary to the opening of the campaign manifested a clearer insight into the nature of the struggle to be fought, or as to the lines upon which the contest should be waged.

But even more interest will attach to the address of Mr. Cockran, by reason not only of the circumstances attending his entrance into the campaign, but also of the personality of the man himself. Mr. Cockran has always been a strong party man, and some time ago it would have been rather difficult to regard him in the light of a possible bolter from a nomination of a national convention. He now, however, finds himself impelled by his convictions to take up that position, and he will be looked to by the great bulk of the Democrats of New York who refuse to support the Chicago platform as a fit exponent of their views. Apart from this, Mr. Cockran has a national reputation as an orator, and he may be counted upon to make the most of the opportunity which the delivery of Mr. Bryan's speech has furnished him. Those who will go to hear Mr. Cockran will look forward not only to a clear and cogent exposition of the sound money side of the issue now joined, but to a display of the powers of an orator such as is seldom witnessed.

Preliminary arrangements have now been completed for the holding of a convention at Indianapolis, Ind., to voice the sentiments of the sound money Democrats, and to nominate candidates to represent them in a fitting way in the campaign. The third ticket movement has been growing both in earnestness and in strength during the last week or two, and the advisability of the movement as a means of securing the defeat of the Chicago nominees is now admitted in many quarters where it was at first regarded as unwise. The convention will not, of course, attract anything like the interest aroused by either the St. Louis or the Chicago gathering, for there will be little or no dispute as to the platform and hardly any contest for the nomination, which will be, of course, only a complimentary one, but it may have very important results, not only as regards the outcome of the present campaign, but also as regards the future of the Democratic party.

In the call for the convention issued by the conference at Indianapolis on the 7th inst. the declaration is made that the Democratic party during its whole history has been pledged to promote the liberty of the individual, the security of private rights and property, and the supremacy of the law; that it has always insisted upon a safe and stable money for the people's use and the maintenance of the financial honor of the nation, as well as the preservation inviolate of the institutions established by the Constitution; that these, its principles, were abandoned by the supposed representatives of the party at a national convention recently assembled at Chicago, and that the Democratic party will, therefore, cease to exist unless it be preserved by the voluntary action of such of its members as still adhere to its fundamental principles. The action taken, the irregular proceedings, and the platform enunciated by that body, are declared to be so utterly and indefensibly revolutionary, and to constitute such radical departures from the principles of true Democracy, which should characterize a sound and patriotic administration of the country's affairs, that its results are not entitled to the confidence or support of true Democrats. All such, therefore, who believe in sound money and law and order are requested to send delegates to a convention of the National Democratic party of the United States, to be held at Indianapolis on the date already mentioned.

It appears that inquiry was recently made of officers of San Francisco savings banks as to whether deposits in those banks might not at some future day be repaid in a circulating medium other than and inferior to gold coin in the possible event of the success of the free coinage movement. With a view to setting any such apprehension at rest, the cashier of the San Francisco Savings Union has, with the approval of the directors thereof, issued a circular to depositors in which it is declared that contracts for the payment of gold coin are lawful under the statutes of both California and the United States, having been so declared by the Supreme Courts of each; that as the constitutions of both state and nation forbid the enactment of laws impairing the obligation of contracts, it follows that creditors may collect in gold coin when such payment is stipulated, and that inasmuch as all evidences of indebtedness held by the Savings Union call for payment in gold coin, payment in that coin will be required from debtors, and the banks will repay depositors in the coin specified.

Reference is made in the circular to the fact that during the civil war and after gold payments were maintained in California, the savings banks participating, while gold was at a large premium in all the states east of the Rocky mountains, and that the by-laws of the institutions and the relations otherwise between the banks and their depositors were then the same as now. The publication of the circular has been indorsed by the principal savings bank officials in San Francisco. One bank president has pointed out in an interview that the specific contract law governs all business in California, every depositor being credited with so many dollars in gold and being entitled to be paid in the same coin. He recalls the fact that some years ago, when gold went to a premium and silver was depreciated, the banks were compelled to open gold and silver accounts, and depositors were repaid in the coin they deposited. The same practice would be followed in the event of gold going to a premium under a free coinage law.

The special contract system under which the California banks are acting is, as is well known, particularly obnoxious to the supporters of the Chicago platform. That document declared in favor of "such legislation as will prevent for the future the demonetization of any kind of legal-tender money by private contract." In his address at New York Mr. Bryan touched upon this feature of the platform on which he stands, and said that the money which is by law made a legal tender must, in the course of ordinary business, be accepted by ninety-nine out of every hundred persons, and that the one-hundredth man should not be permitted to exempt himself from the general rule. Mr. Bryan thus accepts and defends the declaration against the right of private contract made at Chicago. It seems probable that he will have extreme difficulty in convincing the people of California of the desirability of such legislation as that which he suggests.

An important declaration relative to the condition of the negotiations relative to the Venezuelan question was made in the House of Commons yesterday. Sir William Vernon Harcourt, the Liberal leader, asked for information regarding the progress of the negotiations, and particularly as to whether the apparent difficulties had been removed by the proposal of the United States contained in the dispatch of June 12. Mr. Balfour, the government leader, said that the government was still considering the latest proposals of Secretary Olney, which are regarded as opening the way for an equitable settlement, and added that the government had every reason to expect that the pending negotiations would lead to an early settlement of the dispute. Sir William Vernon Harcourt said he thought the House would regard Mr. Balfour's statement as eminently satisfactory.

MR. BRYAN'S SPEECH OF ACCEPTANCE.

Never, perhaps, in the history of American politics has the speech of acceptance of a candidate for the presidency been looked for with so much curiosity as that which was delivered by Mr. Bryan at Madison Square Garden, New York, on Wednesday night. The peculiar circumstances attending his nomination and the effect produced thereby upon the Democratic party, taken in connection with what was known of the personality of the candidate, who won his nomination by a speech, caused his discussion of the great question at issue in the campaign to be awaited with unusual interest. The surroundings of the notification ceremonies were prepared with skill by the managers of the campaign for the Chicago candidate, and the audience which gathered to listen to him was one of great magnitude. In some respects the affair turned out differently from what was expected. Mr. Bryan did not make an oratorical effort of the kind which was generally looked for, but, instead, read a long and carefully prepared address of a kind such as has been rendered familiar in the addresses of public men whose position, rather than oratorical skill, has given importance to what they have had to say.

The main portion of Mr. Bryan's address is naturally devoted to the question of free coinage, but some space is devoted to the discussion of other questions. Through it all there runs a note of defense and of apology. This is seen, for example, in the candidate's explanation that the Chicago platform expressly recognizes the binding force of the income tax decision so long as it stands as a part of the law of the land, and his question whether a future court has not "as much right to return to the judicial precedents of a century as the present court had to depart from them." The note of defense is here apparent, though the speaker declared that he offered no apology for the income tax plank of the platform.

The discussion of the question of the monetary standard by Mr. Bryan is not lacking in ingenuity, and it is not burdened by so much rhetoric of the sophomoric order as has marked some of his other speeches. A considerable part of the address is devoted to some remarks on international bimetallism, and the alleged advantages of bimetallism as asserted by some theorists. It is not international bimetallism, however, that Mr. Bryan and his supporters are striving for, but the free coinage of silver by the United States at the ratio of 16 to 1. They ask, he says, that the gold coins and the standard silver dollar retain their present weight and fineness. There is to be no attempt made to have the weight of the coins altered so as to have their ratio approximate more closely to the market value. The fifty-three-cent dollar is to be a standard equally with gold. Mr. Bryan does not explain how the experience of the past is to be reversed, and the two standards made to circulate together, when one of them represents a value far in excess of that of the other. The two coins could not be kept in circulation together prior to 1873, when the difference between the legal or mint ratio and the market ratio was very slight, and the task would seem to be vastly more difficult now.

Mr. Bryan finds a way out of the dilemma by means of an assumption pure and simple. He says that "the free and unlimited coinage of silver by the United States alone will raise the bullion value of silver to its coinage value, and thus make silver bullion worth $1.29 per ounce in gold throughout the world." How this exact result is to be brought about is explained as follows: Free coinage, he assumes, will create a new demand for silver which will raise the price. His proposition as to the attitude of the United States will be found in his suggestion that "any purchaser who stands ready to take the entire supply of any given article at a certain price can prevent that article from falling below that price. So the government can fix a price for gold and silver by creating a demand greater than the supply." In other words, the United States would stand in the position of offering to take all the silver in the world at $1.29 an ounce. There is, we think, little doubt that the holders of silver at 68c. an ounce would be glad to unload their product at the advance, but how would the American people regard the proposition. The suggestion that such action as is proposed would overstimulate production and bring us more silver than we need is lightly regarded by Mr. Bryan. He says that "if for any reason the supply of gold or silver in the future ever exceeds the requirements of the arts and the needs of commerce, we confidently hope that the intelligence of the people will be sufficient to devise and enact any legislation necessary for the protection of the public." The "confident hopes" of a candidate are a rather infirm security to trust to as a safeguard from threatened disaster.

Mr. Bryan proposes, in effect, as a cure for alleged financial ills, that the United States not only corner the world's output of silver, but maintain such a corner in the world's silver production, be it what it may, in order to make 68 cents' worth of silver worth $1.29. Right here Mr. Bryan and other free silver coinage advocates break down. He, and they who agree with him, say, in effect, "if my plan to corner the silver of the world doesn't work, then the people may 'enact any legislation necessary' for their protection. Try my plan, and if it doesn't work, no doubt you will be able to look out for yourselves."

The Chicago candidate, while advocating bimetallism, is unwilling to have bimetallism at the market ratio. Such a change from the ratio proposed by his supporters would, he says, result in great injustice, because it would result in a contraction in the volume of standard money, and would increase the debts of the world by several billions of dollars. The debtors of the United States cannot afford, he says, to increase the volume of their debts. Moreover, he adds, a change in the ratio is unnecessary. Apparently it would be, under his plan of offering to pay $1.29 per ounce for the entire silver product of the world. The "debtor class" appears to be the special object of Mr. Bryan's solicitude, but it is interesting to know just what he means by "debtor class." He says that "it is sometimes asserted by our opponents that a bank belongs to the debtor class, but this is not true of any solvent bank." Presumably, then, the statement is not true of any solvent individual. It is worth noting that, according to a statement of Mr. Bryan, "there can be no such thing as real bimetallism unless the option (as to which metal shall be used in the payment of debts) is exercised by the debtor." The programme is hardly an attractive one to solvent debtors, whether banks or individuals, however it may commend itself to the other kind.

RAILROAD EARNINGS STILL GAINING.

July gross railway earnings indicate the prevalence of midsummer conditions in transportation lines, although it is worth remarking that in July, as for some time previous, the revenue returns of the railroads have failed to show anything like the falling off which is being and has been reported in bank clearings. On the contrary, railway earnings have shown a gain in every month since January, and, in fact, not a decrease has been reported in any month for over a year past.

The total earnings of 119 railroads for the month of July aggregated $39,259,784, a gain over July a year ago of over 4 per cent., that month, in turn, showing a gain over two years ago of over 8 per cent. It is of interest to note that while gross earnings gained in the neighborhood of 4 per cent. in July this year over last, July bank clearings, on the other hand, fell off more than 4 per cent. from a year ago, and in no month since April has a gain in bank clearings been shown.

The following table shows the increases and decreases in each month for the past three years, and illustrates the position held by railroad earnings for July and the seven months' period of this year:

	1895.	1894.	1893.
August	Inc. 1.6	Inc. .9	Dec. 13.6
Eight months	Inc. 4.2	Dec. 14.0	Inc. .8
September	Inc. 4.6	Dec. 5.3	Dec. 9.5

Totals, U. S.	Inc. 3.5	Inc. 2.6	Inc. 7.3	Inc. 4.0	Inc. 6.4
Mexican	Inc. 1.9	Dec. .9	Inc. 2.3	Inc. 10.8	Inc. 3.5
Totals	Inc. 3.4	Inc. 2.4	Inc. 7.1	Inc. 4.1	Inc. 6.3

As for some time past, the best showing in July is that made by the granger roads, with an increase of 11.6 per cent. The next heaviest gain is that of the Pacific roads, 8.5 per cent. The other groups of American railroads report gains varying from 1.3 per cent. in the case of the southern roads to 5.2 per cent. in the case of the southwestern groups. One group shows a decrease in July from a year ago, the central western roads reporting a decline of 3.9 per cent.

The following increases exceeding $100,000 in amount are to be noted.

Baltimore & Ohio	$148,666
Chicago, Milwaukee & St. Paul	256,983
Chicago, Rock Island & Pacific	103,612
Great Northern	279,294
Norfolk & Western	111,084
Canadian Pacific	258,000
Northern Pacific	116,973
Mexican Central	116,470
Total	$1,391,082

The above eight systems showed an increase for the month of July of $1,391,082, against a gain on all roads of $1,553,000, showing that the above railroads accounted for nearly 90 per cent. of the entire increase reported. In no case was there a decrease exceeding $100,000 reported in July.

The total earnings of 113 roads for the seven months ending July 31 this year aggregated $250,580,879, an increase over a year ago of 6.3 per cent., and following a gain in 1895 over 1894 of 5.2 per cent. In the seven months' period, as in July, the granger roads report relatively the best showing, gross receipts increasing 15.8 per cent. over a year ago, and the Pacific roads make relatively the next best showing with an increase of 12.6 per cent. The southern roads report a gain of 8.2 per cent. and the trunk lines a gain of 2.6 per cent. Decreases are few and very slight, the falling off on the coal roads being only four-tenths of 1 per cent., the decrease on the southwestern roads only one-tenth of 1 per cent., and the falling off on the one eastern road reported only 2.6 per cent.

THE COURSE OF THE STOCK MARKET.

Whether the belief is well grounded or not, Wall street has certainly acted for several days past as if last week's decline in stock values was the culmination of the disturbance created in anticipation of the possibility of the success of the free-silver party in the coming presidential election. It is certain, however, that the recovery in prices that has taken place since last Saturday has been of a character almost as marked as the preceding decline, although the average range of values is still a low one, and there is plenty of room for further appreciation before Stock Exchange prices generally will stand at a level much above those touched in recent panics.

With a view to affording comparison between the quotations reached in last week's decline and the extreme declines and advances attained in the various upward and downward movements that have characterized the market since 1890, the accompanying table has been compiled. The stocks given in the list are those which have occupied the largest share of attention on the part of investors and speculators, as well as a certain number of the inactive securities, whose variations in price are in many cases even more significant as to the tendency of financial and speculative opinion in regard to securities in general. The quotations in each case comprise the lowest point reached in the panic of 1890, following the Baring crash and the heavy sale of foreign holdings in this market. This is followed by the lowest figures to which the same stocks fell during the panic of 1893, occasioned by the decrease of the gold reserve, and the first evidences of the effect of a pro-silver policy upon the currency and government finances, and, consequently, upon mercantile credit and general business. From this point an upward swing of values occurred, culminating in the speculative boom and high prices for securities during the summer and early autumn of 1895, the highest point in each case attained during that movement being indicated in the next column. This is followed by the lowest quotation which the stocks taken as examples of the course of the market reached during the recent depression, together with the recovery, indicated by the highest prices at which they have sold since the close of last week, on the reassertion of confidence, the cessation of bear attacks, and the decreased feeling of apprehension in regard to the possible success of the advocates of free silver.

Stocks.	*Lowest in panic of* 1890.	*Lowest in panic of* 1893.	*Highest,* 1895.	*Lowest recent fall.*	*Recovered to*

It has been the general subject of remark in speculative circles that the decline which culminated at the close of last week brought the market to a lower average level of prices than had been seen at any time since 1877, when the long-drawn period of contraction resulting from the panic of 1873 came to a close. Owing to the fact that nearly all of the prominent stocks dealt in on the Stock Exchange at that period have been increased in volume or represent reorganizations of old companies, while in many cases, particularly the popular industrial speculatives, the present objects of speculative attention were not in existence at that time, an accurate comparison cannot be made. An authority upon such subjects has, however, pointed out that in 1872, prior to the panic of the succeeding year, the highest average price of sixty active stocks dealt in on the New York market was about 76½ points. The lowest average for the same stock in 1877 was about 36⅜, while in 1881, on the boom which came to an end with the assassination of President Garfield, the sixty securities in question sold at one time at an average price of 99⅞, declining by 1885 to about 41¼. As stated before, these figures are of little value in a comparison involving the fluctuations of the last few years. It may, however, be remarked that a general recovery set in in 1887, which wiped out about 50 per cent. of the preceding decline, and that the next significant movement in the market dates from 1890, when the passage of the Sherman silver bill and the brief fictitious prosperity it induced caused an advance of values which, in the case of twenty active stocks still dealt in on the Exchange, brought their average price in May of that year up to about 78 points. The shrinkage in this case began, however, even before the Baring crash in the autumn of 1890, and under the pressure of exceedingly heavy foreign sales of American securities for the purpose of realizing upon investment and speculative holdings, the same twenty securities sold down by the middle of 1891 to an average level of 61½ points. The next noteworthy movement of stock prices was the panic of 1893, in which the twenty leading stocks fell to an average of 43½ points. The repeal of the Sherman act which ensued caused some appreciation, but it was not until the spring and summer of 1895 that the favorable crops and the renewal of business activity, with the remarkable increase in railroad earnings, created a boom in stock prices. The average of the twenty selected securities attained its highest level in the early autumn last year, when the figure touched 63¾. On the Venezuela panic of last December, the same stocks fell to an average quotation of 48½, a depreciation of about 15 points. The highest point of the present year was in April last, when the average was 56⅛, and from that until last week, when the decline in the values of the stocks selected as indexes of the market was nearly 12 points, bringing them to an average level of 43, the decline was almost continuous, or, at least, marked only by slight interruption, in the downward progress. The highest point in the recovery that has occurred since last Saturday is 45, a gain of 2 points.

The fall of values in the stock market that has just taken place will scarcely go down in speculative history as a true panic. In spite of the severity of the shrinkage, it was not attended by many of the manifestations that accompany such a state of affairs. There have, for instance, been virtually no failures. Demoralization, of course, existed, but the absence of any large public interest deprived the liquidation of much of its evil effects. The selling, too, was, to a considerable extent, by bear interests in the market, this fact being demonstrated very conclusively by the heavy covering of such contracts, which is responsible for the major portion of the succeeding recovery of values. It may also be noted that at no time during the last two weeks have the transactions on the Stock Exchange attained very large proportions. Taking the eleven last days, the average amount of dealings on the Stock Exchange have, if anything, fallen below 200,000 shares per day, a condition which, to those conversant with Wall street affairs, would indicate that the scare was mainly a professional one.

POOLING CHICAGO'S SPECULATIVE COLLAPSE.

The Chicago banks and capitalists who were affected by the failure of the Messrs. Moore last week have adopted the most sensible course that was possible under the circumstances. Their interest in the matter was due to the fact of their having made advances on the Diamond Match and New York Biscuit Company stock, which the unfortunate speculators had purchased at high prices and were carrying by the aid of such loans. Leaving out of consideration any question as to whether the banks acted prudently in lending even 150 on a corporation stock like Diamond Match, it was evident from the first that attempts to liquidate the loans would result, owing to the present state of the market, in a further decline, and, probably, in serious losses. A pooling arrangement that would allow opportunity for gradual liquidation of the indebtedness seemed to be the only remedy, and this is what the Chicago institutions have just effected.

A circumstance which has, perhaps, given encouragement to the holders of Diamond Match, and which may facilitate the course that has been determined on, is the news that a contract with Austrian capitalists for the use of the machinery and processes controlled by the company has actually been closed. This was one of the factors on which the Messrs. Moore relied to carry them through. The exact details are not known, but it is reported that the arrangement just effected contemplates the creation of a company with a capital of $10,000,000, of which the Diamond Match Company will receive 51 per cent. in return for its patents and machinery. It is stated that by their process the cost of manufacturing matches is reduced to one-seventh of that by the processes at present used in Austria and other continental countries, the capacity of the Diamond Match machine being between 4,500,000 and 5,500,000 matches per day, at a cost of about 4.80 florins, while by the methods now used in Austria the cost of producing the same amount of matches is nearly 35 florins. The exact terms of the contract are not known, and there may be some modification of the terms originally proposed, definite information on these points being awaited with mail advices from the Diamond Match Company's president, who represents it in the European negotiations. A further claim made on behalf of the management and friends of the company is that negotiations with the principal match manufacturers of Great Britain are also in a favorable state, and that the possibility of a deal in that quarter is very encouraging. It will be remembered that the Messrs. Moore based their speculation in the stock largely upon the chances of these foreign combinations succeeding, and were confident that the conclusion of the arrangements they were endeavoring to make abroad would not only justify the high prices for their stocks, but would result in a further and marked appreciation.

The pooling agreement which has been determined upon, and in which all the large holders of both Diamond Match and Biscuit stock as collateral have joined, provides, it seems, for a deposit of the stock with a trustee for the period of one year, and that the receipts therefor shall be non-negotiable. Provision is made for the allowance of 7 per cent. interest upon the amounts advanced. The arrangement looks, it would seem, to the continuance of the Messrs. Moore in control of both

companies for the period during which the pooling agreement runs, and it is also stated that those gentlemen pledge themselves to refrain from speculation for the time in question. Considering all the circumstances, the matter has been quickly and successfully arranged, though it still ties up the amount advanced to the Messrs. Moore by the Chicago banks.

The Stock Exchange in that city, moreover, remains closed for the present. Some difficulty seems likely to occur in the settlement of open trades in the two stocks affected by the Moores' downfall, and until such questions are arranged the impolicy of reopening the Exchange is evident. An agitation in favor of the speedy resumption of business by the institution has, however, been started, and various propositions are afloat for changes in the rules under which the clearing house for its stock transactions is operated. The movement may have been accelerated by the reports that the principal owners in some of the most important of the local traction stocks are considering the question of withdrawing their securities from the local list and listing them in New York, even though under present conditions it is doubtful whether such securities would find an active market in the metropolitan Stock Exchange.

OUR FOREIGN TRADE FOR THE PAST YEAR.

The official report of the foreign trade of the United States for the fiscal year ending June 30, 1896, contains unusually full and elaborate particulars. It is of more than unusual interest at this period, in view of the frequent announcements in recent months of increases in values of domestic exports as compared with the preceding year in excess of previous gains in the same direction. The following is a condensation of the grand totals of exports and imports for the year specified:

EXPORT AND IMPORT VALUES FOR THE FISCAL YEAR ENDING JUNE 30, 1896.

	1896.	1895.
Imports, free	$369,771,936	$363,233,795
Imports, dutiable	409,938,088	368,735,170
Total imports	$779,710,024	$731,969,965
Per cent. imports, free	47.4	49.6
Duties collected	$160,534,351	$152,158,617
Exports, domestic—		
Agriculture	569,841,714	553,210,026
Manufactures	228,489,893	183,595,743
Mining	20,412,153	18,509,814
Forest	33,718,204	28,576,235
Fisheries	6,585,814	5,328,807
Miscellaneous	4,152,701	4,171,974
Totals	$863,200,487	$793,392,599
Exports, foreign—		
Free of duty	9,486,930	7,484,148
Dutiable	9,919,521	6,661,418

From this it appears that the total increase in values of both free and dutiable importations during the twelve months ended June 30 last as compared with the preceding year, amounts in round numbers to $47,740,000, about 13 per cent., while the corresponding increase in the total value of exportations of domestic merchandise and produce was $69,808,000, a little less than 9 per cent. Notwithstanding the fact that the total proportion of the value of importations free of duty is nearly one-half of aggregate importations, the increased value of the same was only $6,538,000, as compared with an increase of $41,202,000 in the value of dutiable merchandise imported.

Among the more important increases in values of importations (in even millions of dollars) in the fiscal year 1895–96 were sugar, free and dutiable, $13,000,000; manufactures of wools, $15,000,000; raw wool, $8,000,000; hides and skins, unmanufactured silks, and chemicals, drugs and dyes, each, $4,000,000; wood and manufactures thereof, $3,000,000; tobacco, nuts and fruits and raw cotton, $2,000,000 each, and crockery and pig tin, each, $1,000,000.

Very few, if any, of these increased importations represent anything in the nature of luxuries. Perhaps one of the most surprising gains reported is the evidently increasing importation of Egyptian cotton, as shown in the totals just specified. Nuts and fruits might also be regarded as non-essential. Whatever silk and fabrics may have been in years past, they are quite as necessary among the requirements of modern civilization as other products for which increases are specified.

The increases in the various classifications into which domestic exports have been divided naturally attract attention. As pointed out, the total increase in value of domestic exports during the fiscal year just concluded was $69,808,000, or 8.8 per cent., of which $44,894,000 increase was in exports of manufactured products, a gain in that line of nearly 25 per cent. over the year before, the heaviest relative gain shown in any of the classifications of the domestic exports. The next largest increase, in dollars, is $16,631,000 in exports of agricultural products, which is a gain of only 3 per cent. of the total value of foreign shipment of such products over the previous year. The increased valuation of products of the forest is $5,142,000, or 18 per cent., and of products of the mines $1,903,000, or 10.5 per cent.

Among the more important increases in the values of exports are those of Indian corn, $23,000,000; refined oil, etc., $15,000,000; iron and manufactures thereof (including $4,000,000 worth of machinery, engines, etc.), $9,000,000; copper, $4,500,000; live cattle, $4,000,000; manufactures of leather, $5,000,000; leather, $3,500,000; oats, $3,000,000, and manufactures of cotton, $2,500,000. It should be added that there are decreases in values of exports amounting to $15,000,000 worth of raw cotton, $10,000,000 worth of hog products, and $4,000,000 worth of wheat.

The exhibit, as far as the foregoing analysis goes, is favorable, in that it points to an unquestionable improvement in our foreign trade during the twelve months ended June 30 last, one feature of which is involved in the statement that the duties collected on imported products during the year amounted to $160,534,351, as compared with $152,158,617 in the preceding year.

SILVER BULLION TO MEET FREE COINAGE.

To the Editor of BRADSTREET'S:

SIR—A very intelligent correspondent who has read one of my letters to the daily press, in which I stated that the silver party would create two privileged classes by whom silver would be mined or imported, put through the mints of the United States to be coined at the cost of the taxpayers, and then forced upon the community under a legal-tender act or force bill at a nominal rate of $1.2929 per ounce, which is double what it costs in gold, or more. He now asks if there are any great masses of silver bullion existing or which could be immediately produced that could be brought here from other countries to take advantage of this opportunity which we should extend to them. In other words, he asks, where is this great weight of silver bullion to come from which is not now in monetary use in other countries where it is a legal tender and therefore unavailable for export?

On some of these points I cannot give exact figures, but they are not important. The German act of 1873, to which so much influence has been imputed adverse to the silver standard, so called, was an act for the unification of the coinage of the German empire. Prior to that date the monetary system of the empire was in hopeless confusion. There were, as I recall the report, over sixty different kinds and denominations of silver coin, a very large portion of which were worn and were below standard weight. There were about thirty different denominations of gold coin, and there were several kinds of paper money, which, in some of the states, had, I believe, the force of legal tender. The German act of 1873 was an act under which all these coins, except some heavy thalers of silver, of which not very many were in use, and of which the coinage was stopped, were called in for redemption by the government. A new system of coinage was established, a standard mark of gold being the unit, while a new coinage of silver marks and of subsidiary coin of limited legal tender was issued up to the amount or quantity that could be put in circulation for use among the German people. When that quantity was reached a large weight of old silver coin was left upon the hands of the German government. A part of that was melted into bullion and sold. At that time, or soon after that time, the United States began to buy silver bullion under the Bland act, and doubtless bought a very considerable part of this old German silver coin which had been cast into bullion. But although the demand for silver was thus increased by our purchase, the price fell, and Germany stopped selling, with a very large quantity still on hand—many million ounces. I have seen a statement of the quantity, but I do not know how much it now is. That bullion would be instantly sent here and converted into our coin if the opening of our mints to the free coinage of silver should make such a use for silver as to carry the market price of the bullion to a parity with gold, or near to it, at the ratio of 16 to 1. That is a minor source from which bullion would come.

It is also well known that the silver coin which was coined by the several states of the Latin Union, in one and five franc pieces, circulated without discrimination through France, Belgium and Italy and the other members of the Latin Union, so called, under an agreement that when that union was terminated each country should redeem its own coin at the ratio of 15½ to 1. It is well known that all these countries now have coins of this kind in very large quantities which cannot be kept in circulation. Again, if such a use were created by the free coinage of silver at 16 to 1 in this country as to bring the market value of silver bullion from 68c. to 70c. an ounce nearly up $1.2925, great quantities of this bullion held in excess by the several states which composed the Latin Union would be immediately exchanged in this country for gold and would be put through our mints, to be forced upon our people in legal-tender silver dollars.

Again, in China there is an unknown quantity of silver which passes by weight at its bullion value. There is no legal-tender act in China, unless one has been decreed very recently. The money of the masses is copper cash, so called—a round coin, made chiefly of copper, with a square hole in the center through which it is carried on strings. This coin is the survival of Chinese knife money which originated and circulated many centuries ago, serving the use of a knife and also as a medium of exchange. When better knives were invented the blade was removed, that which constituted the handle taking the conventional form of the copper cash. Occasionally, even this copper money becomes redundant. An old friend of mine, once finding that the cheapest supply of copper could be had by selling goods imported from this country into China for copper cash, loaded a ship with the redundant currency, sending it to this country to be converted into commercial copper. The money in which the larger transactions are liquidated in China are Mexican dollars after they have been "chopped" or stamped with a certificate of weight by Chinese bankers. Our trade dollars, so called, were made to compete with these Mexican dollars at the same weight and of the same quality. I have not the exact figures, but I think over thirty million were coined, nearly all of which were sent to China, where the greater part of them were "chopped" or stamped by the Chinese bankers. Those remained in China. When the price of silver declined some of these trade dollars appeared in our circulation, and one of the recent acts of this country was to withdraw all trade dollars for conversion into standard dollars of full legal tender, with the condition that only such trade dollars would be received as had not been "chopped" or stamped by a Chinese banker. A very few million came in. The greater part, I think now over twenty-five million, still remain in China.

The Chinese "shoe," so called—a lump of silver which resembles a wooden shoe—is the principal standard or unit of China passing by weight. Any quantity of this silver can be obtained in China at its bullion value, or at a very small advance over its bullion value in China, none being more acute than the Chinese merchants to turn a safe profit on a very small margin.

When I was in London a few years since, shortly after the diplomatic difficulties between this country and China, I heard a rumor that measures were being taken to make dies exactly corresponding to the stamp of our standard United States dollars, which were to be sent to China to be used in converting United States trade dollars and Mexican dollars into standard dollars. It was said that this could be done only at the expense of coining, the silver being already assayed and alloyed and each dollar weighing 8½ grains more than our standard dollar. It was said that these coins could be sent from China through Mexico, British Columbia and the Sandwich Islands in sufficiently large quantities to make it a very profitable business. I was unable to trace this rumor to its source and have never seen any evidence that it had been carried into effect. But how could that evidence be obtained? We know that there are only about 66,000,000 standard dollars of our own coinage in circulation. How do we know that there are not many more of exactly the same weight and quality, carrying the same identical stamp, which may have been made for us in China and Japan, or in Mexico, where the profit would now be nearly 50 per cent.? How long will it be before such a plan is worked on a very extensive scale, even if it has not yet been worked?

It will be remarked that the registered figures of the export and the import of gold are somewhat fallacious. When the legal-

tender notes of the war period became depreciated more than 10 per cent., the subsidiary silver coin of this country vanished in a week. Very large quantities of it turned up in Canada, where it became a nuisance. But the figures of export never showed how much of that silver passed from this country into Canada, nor when silver reappeared, a little before the resumption of specie payment, did the reimport become registered.

All our estimates of the gold in the United States include about as much gold out of sight as there is in sight in bank reserves and in the Treasury. The existence of this unregistered gold is assumed from the figures of export and import. Who knows how much of this assumed reserve of gold coin has passed on underground railways or in the pockets of Chinamen and other returning immigrants in exchange for standard dollars coined in other countries?

But, aside from this somewhat speculative question, and wholly aside from the existing volume of silver bullion in Europe and in Asia, which would instantly crowd our mints in exchange for all the gold that we have, visible or invisible, it may be remarked that by far the larger part of the annual product of silver bullion is mined in Mexico, South America, Australia and elsewhere, and not in the United States.

In 1873 the world's production of silver in fine ounces was 63,267,187. Its commercial value was $82,120,800. Its coining value was $81,800,000, its bullion value being then a trifle in excess of its coining value. At that time the bullion value began to decline, and that decline continued until it reached the lowest point in 1894, when the bullion value of a silver dollar was $0.491. Since then there has been a slight advance, the recent value of the bullion in a silver dollar having been fifty-three cents (53c). Notwithstanding this excessive and rapid decline, the product of the world in fine ounces from 1879 (the year after the passage of the Bland act, to 1890, the year of the passage of the Sherman act), increased from 74,383,495 ounces in 1879 to 126,095,062 ounces in 1890. From 1891 to 1893 increase the average product was on the average 152,000,000 ounces. In 1894, the year of lowest bullion value, it was 167,752,561 ounces, the largest product in quantity then attained. At the slightly advancing price it is now increasing. These facts give conclusive evidence that the production of silver bullion costs less than fifty cents a dollar in gold, since, if it did not, this increasing supply could not be sent to market in the face of the declining prices. Our own share in the present product at the lowest point, 1894, was 49,500,000 ounces, *being less than one-third of the world's product of that year.*

The most productive silver mine in the world is or has been the Broken Hill Mine, in Australia. The second or third, authorities differing somewhat, is the Anaconda Copper Mine, in Montana, where the silver is a secondary product of the copper, which must be separated in order to make the copper useful, and which is reputed to be all profit whatever it brings. The ownership of a large share, if not a controlling share, in that mine, sometimes said to be the whole, has lately passed from its former owners to one of the largest banking houses in Europe. The second or third, it being doubtful which takes that place, is reputed to be the Huanchaca Mine, of Bolivia.

There is another source. After the repeal of the Sherman act, or, rather, after the great decline which led to the repeal of the Sherman act, the production of this country fell from its highest point in 1892 of sixty-three and one-half million (63,500,000) ounces to forty-nine and one-half million (49,500,000) ounces in 1894. It is well known that there are vast quantities of low-grade ores which then ceased to be worked on which production would be immediately resumed if by forcing silver dollars of full legal tender into use the owners of the silver mines could bring them nearly to a parity at the ratio of 16 to 1, or $1.2929 an ounce.

I think that these statements may satisfy any reasonable person that there is a mass of silver bullion either now in existence or which could be produced in the next three years after the passage of the free-coinage act, quite sufficient to take away from circulation or use in this country the whole of our present visible stock of gold, and also the whole of the assumed invisible stock, or any part of such stock that is in existence. Of course, this gold would not all be parted with for export. The instant the free-coinage act should be passed there would be an immediate suspension of gold payments, and much of the gold now in sight would be placed on special deposit by its owners to serve as the reserve of the larger transactions in manufacturing, commerce, insurance, and the like, which would be immediately put upon a gold standard. In this way the whole loss, uncertainty and discredit which might ensue would be put upon the masses of the people, while out of the fluctuations and variations then ensuing great fortunes would be made, to be mainly invested in land, as they were during the period of the depreciation of greenbacks by the shrewd men who, knowing from previous experience what the malignant effect of the debasing of the currency would be, took advantage of it to lay the foundations of some of the greatest existing fortunes.

I, of course, impute no willful wrong to the men of experience and ability who thus defended themselves against the evil influence of a debased currency. Should our existing unit of value be displaced and the silver dollar be established as the unit of value of this country, it would of course be rated at its bullion value in a very short term of years. In that interval of adjustment, longer or shorter, as it might be, the silver miners would reap their harvest, afterward supplying silver under the normal conditions of demand and supply at bullion value. All the necessaries of life which are imported would of course be immediately advanced in price, else they could not be imported. The period of industrial paralysis would be slowly overcome during which the prices of domestic products might not rise rapidly, but must ultimately be brought to the same standard. Wages would, of course, lag very far behind in the advance, as they did during the depreciation of the legal-tender notes, in spite of the abnormal demand of war, losing in purchasing power one-third before they began to recover.

Constructive enterprise ceasing, land would then be one of the last things to feel the advance. In that interval all prudent men would lay an anchor to windward by investing the depreciated money to a greater or less extent in landed property. This was the course of very many able men during the depreciation of the greenback, and, perhaps, in many instances, in the southern states, under the confederate money system. I know positively of only one instance of the purchase of 10,000 acres of the most valuable land in one of the border states by a shrewd man, who, having large contracts with the confederate government, invested the proceeds as fast as he could get them in land.

EDWARD ATKINSON.

Boston, Aug. 10, 1896.

FREE COINAGE AND ECONOMIC WAR.

The probable effect of the adoption of a free-coinage policy at the ratio of 16 to 1 by the United States was considered at a recent conference at Berlin, of which an account is given in cabled advices from the German capital. This conference was held at the residence of Prof. Sering, of the Berlin Academy of Agriculture, and to it were invited Baron Von Hammerstein-Loxten, Prussian Minister of Agriculture; Dr. Thiel, First Councillor of the Ministry of Agriculture; Hon. Edwin F. Uhl, United States Ambassador to Germany; Dr. Schumacher, who has made two official visits to the United States for the purpose of studying the agricultural conditions prevailing in America; Mr. Turke, representing an agricultural machinery manufacturing firm; David Lubin, of Sacramento, Cal., as the representative of the Patrons of Husbandry, and two or three other prominent agrarians. Baron Von Hammerstein-Loxten and Ambassador Uhl, having made prior engagements, were unable to attend the conference, but all of the others who were invited were present. Mr. Lubin submitted a series of questions for discussion bearing upon the respective causes, effects and remedies connected with the decline of prices in the agricultural products of the world. Among the number of remedies suggested by the questions submitted were the remonetization of silver at a ratio of 16 to 1 and the establishment of a free-trade system.

According to the report the submission of the questions was followed by a discussion, which lasted five hours. Prof. Sering delivered an address, in which he expressed his belief that the prices of agricultural products had reached their lowest figures, but he admitted that, while they would not fall any lower, it was possible that they might remain stationary for a long time to come. Alluding to Mr. Lubin's contention, which was that if their efforts to establish a free trade system should fail the farmers of the United States ought to be granted bounties upon their exported product by the government, Prof. Sering said that he was not surprised at Mr. Lubin's demand, but he warned him and the others of his hearers that if such a system of bounties were established, it would immediately elicit strong retaliatory measures in Europe, and perhaps cause the creation of a protectionist union of the European countries against the United States. It was a mere delusion, he continued, for the agriculturists of the United States to suppose that France and Germany could be starved into surrendering. The Argentine Republic and Russia, he said, could provide an ample supply of wheat, meats, etc., for an indefinite time.

Concurrence in Prof. Sering's opinions was expressed by Dr. Schumacher, who said that the free coinage of silver at a ratio of 16 to 1 in the United States would necessarily induce a very serious economic conflict with Europe. Mr. Turke, whose commercial connections are chiefly with the Argentine Republic and Russia, expressed himself as convinced that both of those countries were only beginning their careers as the grain providers of the world. Russia, he said, was developing in the production of grain amazingly, and he predicted that within a few years the whole of Southern Siberia would become a serious competitor for supplying Europe and the rest of the world with cereals. Prof. Sering suggested the creation of an international alliance of the agrarians of the world, with a central bureau in London, Washington, Berlin or Paris, and that the alliance hold an annual meeting of delegates for the various agrarian institutions. The proposal was deferred for the action of a future conference. So far as can be gathered from the reports there was no serious dissent from the view expressed by Prof. Sering, who led in the discussion regarding the probability of an economic war as the result of the adoption of free coinage by the United States.

SILVER AND LIVING CONDITIONS IN MEXICO.

An unusual amount of interest has been manifested recently regarding conditions in Mexico, the nearest to the United States of any of the countries where a silver standard prevails. This, of course, is owing to the bearing which the information may have on the campaign discussions regarding the free coinage of silver in the United States. Among those who have contributed to the understanding of conditions in Mexico is Mr. James W. Porch, of Philadelphia, who was formerly consul-general at the City of Mexico. Mr. Porch's personal experience in Mexico has covered a period of twelve years, during which period, he says in an interview in the Philadelphia *Press*, he has seen silver gradually depreciate from about 84 cents on the dollar to 53 cents, and at times go even lower. Whenever there has been a rally in its value it has been because of a demand for silver in China, Japan and the East Indies, and as soon as this demand stops the Mexican silver dollar sinks to a point lower than it was before the rise. The tendency has been downward, and his opinion is it will go even lower, as its value is based entirely on what it represents in the markets of the world.

There is, he says, no part of Mexico with which he is acquainted where the cost of living has in any degree depreciated in comparison with the depreciation of their money. It needs to be understood that Mexico did not go to a silver basis as a matter of choice, but as a matter of necessity. There is no gold to speak of found within her borders. There is enough silver in Mexico, when the value of silver shall be increased, to supply the markets of the world. In case of the success of the free-coinage advocates in the United States, he believes that we will hear of more silver being mined in Mexico than the most sanguine ever dreamed of, and that our country would be flooded with silver mined in Mexico with cheap labor, and that that commodity would be almost as common as the debased metals. Miners get about fifty cents per day in silver, and the most skilled of them not over a dollar. All other labor does not exceed thirty-seven and one-half ceats a day.

"In Mexico," Mr Porch adds, "is to be found the most striking contrast between the rich and the poor. There is no middle class to speak of, and fully one-half of her population of thirteen millions of people have never known what it was to be free from want. I do mean free from such want as certain classes in our own country are afflicted with, but free from wants of the actual necessities of life. Millions of them

never know what it is to wear a pair of shoes or sleep in a bed, and their entire housekeeping outfit with their wearing apparel included would not be worth five dollars of our money. * * * It is true that Mexico is making progress, but there is no comparison to be made between the toiling millions in the United States and those of Mexico.

"The business men of Mexico, outside of the mine owners, are not in favor of silver, and were it possible for them to change to-morrow to a gold basis it would be done. My experience there under a free-silver régime showed me that the people are poorly paid, poorly clothed, poorly housed and poorly educated. Of course I am speaking of the masses. We would rapidly degenerate to the same condition as soon as the purchasing power of our dollar was cut in two. We would not only suffer from the depreciation, as they do, but we would suffer from an equally as great a curse—fluctuation. You can readily understand that the purchasing power of the dollar changing from day to day, wavering in its decline it is true, but gradually down, makes all business ventures that have a future settlement as a part of the transaction very unsafe and very hazardous."

Conditions in Mexico are hardly of a kind to tempt sober-minded citizens of the great republic to change from the existing gold standard to a silver basis for their currency.

EUROPEAN INVESTMENTS IN THE UNITED STATES.

One of the stock objects of denunciation on the part of the advocates of unsound money is our obligations to foreign capitalists. To judge from some of the utterances on this subject, it would seem to be the policy of the speakers and writers on the free-silver side to put the European capitalist who has loaned money to our citizens, or who has purchased the securities of our corporations as an investment, in a light of a conspirator against the liberties of the country and the material welfare of its inhabitants. Even where there is no such exaggeration on this score, expressions are heard to the effect that the debt due to Europe by the United States is not merely a temporary embarrassment, but a serious, permanent disadvantage to the country.

It is scarcely necessary to point out to the readers of this journal the fallacies which underlie such views. The necessity of remitting huge sums to Europe from time to time in order to pay interest or principal of such obligations is no doubt an inconvenience. But it is one which all persons who have borrowed money are forced to submit to, and the principal question is whether the loans have been profitably employed in developing the country or facilitating the conduct of business. It should also be observed that any embarrassment the United States has suffered within the past five or six years has been mainly the result of our own financial policy. The silver crisis, in its various stages, has not only prevented the investment of foreign capital in our securities with its customary freedom, but has caused the owners of European capital to call in the money they had invested in the United States. This tendency was in its first stages aggravated, no doubt, by the Baring failure and the panic, which forced British investors to draw in capital from every part of the world in which they had employed it. But the fact remains that if order were restored in our currency and assurance given of its stability, renewed confidence in the United States would cause a corresponding renewal of investments of foreign capital here.

This phase of our currency problem has been lately examined by the London *Statist* as follows: "When a crisis depresses any particular trade many of those engaged in it find it difficult to repay advances made to them by their bankers, but nobody ever thinks of saying that it is, therefore, a bad thing to take advances from a banker, or that the business could have reached its present development if banking advances had not been obtained. It is precisely similar with communities. The United States has been opened up, settled and brought to its present great prosperity and power by European skill and by European capital. Just at this moment errors committed by Congress have caused European investors to doubt whether the credit of the United States is quite as good as they had hitherto believed it to be, or induced them to hesitate whether, if they invest in gold now, they can count in the future on receiving both interest and capital in gold, or its equivalent. Consequently there is a greater unreadiness than in the past to make large advances of any kind, and hence the remittances that are required to be made to Europe are extraordinarily large.

"During the present century the growth of the United States has been wonderfully great, but throughout that whole period the investments of Europe in the United States have been on an immense scale. Although for the moment Europe is unwilling to continue investing, the United States has been able to fulfill all its obligations promptly and readily, and its difficulties even now are so slight that if Congress were but willing to pass the requisite legislation, the crisis would come to an end almost immediately and prosperity would return. In other words, so great an advantage has the United States received from the vast inrush of European capital that the debt it has incurred is a mere trifle to it, and the difficulties arising out of that debt could be ended in a day if the authorities would only take the proper steps thereto. Supposing that Congress were to legislate wisely, and that European investment were to begin again on the old scale, prosperity would return, and the growth of savings would be so immense that at the end of another generation the increased debt to Europe would be a mere trifle compared with the augmented wealth of the United States. The benefits to Europe arising out of sound investments under safe conditions would be very great, but they would be quite insignificant compared with the advantages that would accrue to the United States. A very large part of the United States is still very new—is, in fact, only thinly inhabited, or, to put it differently, is occupied rather than settled. There is, therefore, almost infinite room for the employment of borrowed capital that would yield immense profits where wisely used."

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

A step of some interest is to be taken in New York state where the entire civil service is to be newly classified, and the rules and regulations thereof revised and recast. The policy of requiring appointments in the civil service to be based upon the fitness of applicants was inaugurated in New York by a statute of 1883, and a commission was provided to administer the law under rules and regulations which the commission was given authority to prescribe, subject to the removal of the governor. The scheme for the regulation of the civil service contemplated by this statute has been since somewhat enlarged and modified by other legislation, and a section was incorporated in the revised constitution of 1894 providing that "appointments and promotions in the civil service of the state, and of all the civil divisions thereof, including cities and villages, shall be made according to merit and fitness, to be ascertained, so far as practicable, by examination, which, so far as practicable, shall be competitive." In a letter to the State Civil Service Commission, which has just been made public, Governor Morton says that this constitutional provision permanently established the merit system in the public service of the state; that it has been under consideration by the highest judicial tribunals, and has received a construction which substantially makes it self-executing and binding upon all officers charged with the responsibility of making civil appointments, and that the rules and regulations prescribed by the Civil Service Commission upon its creation in 1883 have not since been seriously modified, except in matters of detail, and the opinion is quite general among those interested in this subject that the civil service movement has outgrown the statutes and regulations upon which it was originally based, and that such rules and regulations should be recast and a new classification of the entire civil service made to conform to the requirements of the revised constitution and the enlarged scope of the public service.

Continuing, the governor says that, in his opinion, the experience of the commission during the last few months shows the necessity of a new classification, and that the time seems to have arrived when such classification should be made and new rules and regulations established, better adapted to existing conditions and conducive to a more satisfactory administration. The duty of providing for such administration still rests upon the commission and the governor, who says that he thinks the constitution clearly provides for three classes of appointments, namely, exempt, non-competitive and competitive, and the duty seems to rest upon the commission to determine in what cases applicants should be subjected to examination, and in what cases, by reason of the peculiar responsibilities and functions of the office, an examination is not "practicable." Reference is made to the modification of the general principle at the basis of the civil service reform legislation by the preference given to veterans of the late war, and the suggestion is made that the provision relating to the veterans be liberally interpreted. The commission is requested, in the governor's letter, to prepare and submit at their early convenience, for executive consideration, such a revision of the rules and regulations concerning the administration of the civil service as they may deem proper, together with a new classification of such offices of the state, and of the civil divisions thereof, as may be within the present jurisdiction of the commission.

CURRENT BUSINESS NEWS.

Industrial.

The Midland Steel Works and the Indiana Iron Works, in Muncie, Ind., have resumed operations, with nearly 500 hands in each mill.

The Snead & Co. Iron Works, in Louisville, Ky., employing 300 men, have given notice of a 10 per cent. reduction in wages, owing to the depressed condition of business, resulting from the agitation of the money question. "The announcement is made that wages will no doubt be restored should the gold standard triumph."

The strike or lockout at the Brown Hoisting Works in Cleveland, Ohio, "is practically at an end. Of the 800 men who went out on strike 500 are now engaged in other employment. The Brown Company has 335 men at work, and has refused twenty-five applications for employment."

Sixty coöperative shops have been opened in New York by Brotherhood tailors. About 800 men were employed. Over 200 contractors have signed the Brotherhood's new agreement. Their shops employ 4,000 men.

The *Engineering News*, in a short editorial, declares that, notwithstanding the fact that the bicycle was introduced in England earlier than in America, its use as a vehicle in daily business and not merely as a pleasant recreation does not appear to be anything like as common in England as in America.

The Menominee Iron Works, of Menominee, Michigan, have received a request through the Japanese consul, at Tacoma, to bid on the machinery for establishing a complete modern saw mill in Japan.

Commercial.

The harbormaster of Tacoma makes the following report regarding the ocean commerce at that port for the month of July: Imports consisted of two cargoes of Oriental merchandise valued at $680,328, which, together with imports reported for six months previous, $1,433,415, makes a total of $2,113,743 for the past seven months. Exports included 44,104 barrels of flour to Japan and China, valued at $120,514; 2,144,000 feet of lumber to France and Australia, $18,808; miscellaneous merchandise to Japan and China, $386,383; miscellaneous merchandise to British Columbia, $25,678; 26,900 tons of coal to San Francisco, $80,700; 3,535,000 feet of lumber coastwise, $29,225, making a total of $661,308, which, with $3,177,019 previously reported, makes a total of $3,838,327 for the past seven months, compared with $2,587,915 during the same period last year, or an increase of $1,250,412.

Statistician Brown, of the Produce Exchange, estimates the following yields of wheat and corn, based upon the government report of condition: Winter wheat, 22,794,000 acres, average 11.5 bushels, total 262,131,000 bushels; spring wheat, 11,825,000 acres, average 12.3 bushels, total 145,448,000 bushels; corn, 81,000,000 acres, average 27.6 bushels, total 2,235,000,000 bushels.

The condition of spring wheat has fallen since July report from 93.3 to 78.9, a decline of 14.4 points.

The condition of oats has fallen since last report nineteen points, or from 96.3 to 77.3. Spring rye condition is 88, against 98.6 in July, while barley has fallen from 88.1 in July to 82.9 for August. The average of buckwheat is given as 99.5 per cent. of last year's area. Condition of same, 96. Condition of Irish potatoes, 94.8, against 99 in July. Condition of tobacco, 86.5, against 91.5 July 1.

The Hamburg-American Packet Line will honor the Keystone State by naming the largest freight carrying vessel in the world Pennsylvania. This steamer, which will be launched in September, will be 568 feet in length and 62 feet in the beam, and will have a displacement of 20,000 tons.

The report of the statistician of the Department of Agriculture for August indicates an improvement in the condition of corn over that reported last month of 3.6 points, or from 92.4 to 96.

In connection with the recent pooling of the petroleum business of the Hamburg firm of John & Co. with that of Philip Pots, of Mannheim, and the Passows, of Bremen, the Hamburger Boersenhalle now makes the announcement that all of the dealings of the members of the pool or "rings" have been "transacted with the Standard Oil Company since May 24, and that the unification of the petroleum trade of the world is now an accomplished fact."

The hop situation, bad as it is, might still be worse. The vital trouble is, as previously pointed out by *American Agriculturist*, that the stocks of old hops now on hand are estimated to be sufficient for from four to eight months' consumption, while some believe there is almost a year's supply. It is almost impossible to obtain anything like exact data as to these stocks, because they are largely held by brewers who will not give any figures whatever, either as to stocks or consumption.

It is probable that the fruit trade between Cuba and Philadelphia "will be discontinued for the present, owing to the burning of banana plantations and the adverse action of Spanish authorities."

The Chattanooga *Tradesman* says: "The same causes produce depression in mercantile and industrial circles, but no uneasiness is being felt, as activity will be the immediate result of a change in the weather. Merchants and manufacturers are very much encouraged as to the outlook. Dullness still characterizes iron and steel, but the markets are less demoralized in tone, since it has been decided to maintain prices for this month."

The export trade of the United States, according to the usual monthly statement compiled by the Chief of Statistics, Treasury Department, shows a gratifying increase this year over that of 1895. The figures for the month of July and the seven months ending with July 31, 1896 and 1895, are as follows:

JULY.	1896.	1895.
Breadstuffs	$12,410,668	$8,500,913
Cotton	3,601,343	1,918,979
Mineral oils	5,498,917	4,995,058
Provisions	13,891,757	14,029,387
Totals	$35,402,685	$29,444,337
SEVEN MONTHS ENDING WITH JULY 31.		
Breadstuffs	$81,491,746	$63,588,723
Cotton	*190,437,930	*200,244,320
Mineral oils	35,121,823	29,367,598
Provisions	94,843,661	89,847,324
Totals	$401,895,160	$383,047,971

* Eleven months.

Financial.

The following securities were sold at auction this week at New York:

4 Shares Fifth Avenue Bank, $100 each	$3,000 per share
8 Shares United States Trust Company	1,060
200 Shares Mechanics' & Traders' Bank (hypothecated)	125
600 Shares Philadelphia & Reading Railroad Company reorganization certificates, 2d assessment paid	9
$3,000 American Yacht Club 2d mortgage 6 per cent. bonds, 1908	61
$20,000 Oregon Improvement Company consolidated mortgage 5 per cent. bonds, 1939	7¼ to 7½
$11,000 Wilkes Barre & Eastern Railroad Company 1st mortgage 5 per cent. gold bonds, 1912, guaranteed	64½
$4,500 New York & Wilkes Barre Coal Company 6 per cent. bonds, 1933	42
$5,000 Union Pacific, Denver & Gulf Railroad 1st mortgage bond (hypothecated)	26⅛
34 Shares Globe Stationery & Printing Company	13 to 23
$5,500 New York Suburban Water Company 1st mortgage 5 per cent. gold bonds, 1925	65
80 Shares New York Suburban Water Company trust company certificate	$2 lot
10 Shares Georgia Railroad & Banking Company, Augusta (hypothecated)	153¼
20 Shares Mobile & Ohio Railroad (hypothecated)	15¼
82 Shares Iowa Central Railroad preferred (hypothecated)	21⅝
$10,000 St. Louis & San Francisco Railroad consolidated 4 per cent. bonds, trust certificates, 10 per cent. assessment paid	27½

The Canadian Pacific Railway Company has declared a semi-annual dividend of 2 per cent. on its preferred stock and 1 per cent. on its common stock, payable October 1.

The Third Avenue Railroad Company has declared a quarterly dividend of 2½ per cent., payable August 26.

The American Coal Company has declared a semi-annual dividend of 4 per cent., payable September 1.

The Diamond Match Company has declared a quarterly dividend of 2½ per cent., payable September 15.

The Standard Bank, in Toronto, Ont., has given notice that after August 15 American $1 silver certificates will only be received for 90c. "It is understood that other banks will follow the example."

Lyman J. Gage, president of the First National Bank of Chicago, says: "I admit, for argument's sake, at least, that if the government should decree that doughnuts should be legal tender for debts—a doughnut for a dollar—then (if doughnuts did not become too plentiful) they would be largely enhanced in value while they were in demand to satisfy existing contracts or pay existing debts, but I do say that, as under such conditions, all existing contracts would soon be canceled and no new ones created, except upon the basis of the natural exchangeable value of doughnuts, they would soon cease to be in demand, and, possessing themselves only the value of doughnuts, they would sink back to their natural doughnut value."

Toronto banks, says a press dispatch, "have been besieged during the last week or so with applications from Americans anxious to deposit their money." Several banks have opened accounts with Americans, and are charging from ¼ to ⅛ per cent. on deposits.

The Chicago, Burlington & Quincy Railroad Company has declared a quarterly dividend of 1 per cent., payable September 15.

The Mexican Northern Railway Company has declared a quarterly dividend of 1 per cent., payable September 2.

The Hecker-Jones-Jewell Milling Company has declared a quarterly dividend of 2 per cent. on its preferred stock, payable September 1.

The Baltimore & Ohio Railroad Company reports gross earnings for July of $2,089,470, an increase of $148,666 as compared with the same month last year.

Railroads.

The New York, Ontario & Western Railway Company reports for the fiscal year ended June 30:

	1896.	1895.	Changes.	
Gross earnings	$23,704,870	$21,412,116	Inc.	$2,292,754
Operating expenses	16,193,956	14,387,476	Inc.	1,806,480
Net earnings	$7,510,914	$7,024,640	Inc.	$486,274
Other income	379,930	217,254	Inc.	162,676
Total income	$7,890,844	$7,241,894	Inc.	$648,950
Fixed charges	5,146,131	4,414,495	Inc.	731,636
Surplus	$2,744,713	$2,827,399	Dec.	$82,686

The New York, Chicago & St. Louis Railroad reports for the quarter ended June 30:

	1896.	1895.	Changes.	
Gross earnings	$1,311,022	$1,414,551	Dec.	$103,529
Operating expenses	1,067,122	1,168,811	Dec.	101,689
Net earnings	$243,900	$245,740	Dec.	$1,840
Other income	984	1,946	Dec.	962
Total income	$244,884	$247,686	Dec.	$2,802
Fixed charges	300,400	288,364	Inc.	12,036
Deficit	$55,516	$40,678	Inc.	$14,838

Cash on hand $220,845, and profit and loss surplus of $11,779.

The New England Railroad Company reports for the quarter ended June 30:

	1896.	1895.	Changes.	
Gross earnings	$1,390,626	$1,566,826	Dec.	$176,200
Operating expenses	1,012,496	1,057,927	Dec.	45,431
Net earnings	$978,130	$508,899	Dec.	$130,769
Other income	5,451	1,537	Inc.	3,914
Total income	$383,581	$510,436	Dec.	$126,855
Fixed charges	376,827	459,548	Dec.	82,721
Surplus	$6,754	$50,888	Dec.	$44,134

The Delaware & Hudson reports operations of leased lines in the state of New York for quarter ended June 30, as follows:

	1896.	1895.	1894.	1893.
New York & Canada —				
Gross	$220,223	$217,830	$200,807	$223,259
Net	54,232	43,289	129	def. 141
Deficit after charges	28,399	32,111	77,397	80,375
Rensselaer & Saratoga —

Deficit after charges	sur.9,276	117	129,704	186,759

The following comparison is made by Mr. S. Chapman between railroads in the United States and the United Kingdom railroads:

	United Kingdom.	United States.
Miles of line	19,036	175,444
Passengers carried, millions	884.6	583.2
Passenger earnings, millions	£30.5	$276.0
Freight carried, million tons	215.0	675.1
Freight earnings, millions	£43.0	$700.5
Parcels earnings, millions	£5.6	....

The all-rail east-bound shipments of dead freight from Chicago last week were 49,126 tons, against 46,486 tons the previous week and 46,415 tons the corresponding week of the previous year.

The following gross and net earnings are reported for June and the six months ending June 30:

JUNE.	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.
Alabama Gt. South'n	$112,426	$115,998	$13,599	$29,969

The time record for freight delivery between England and Chicago has been broken by a large consignment of goods which reached a wholesale house "nine days and fifteen hours after it left the dock at Southampton in the hold of the American Line steamship St. Louis."

It is understood that the request of the Pennsylvania Railroad Company for a differential for its Pan Handle line, on business between Chicago, Pittsburgh and New York, "is to be granted by the Joint Traffic Association. The request to grant the Pan Handle a differential was made by General Passenger Agents Wood and Ford, of the Pennsylvania lines, and their efforts were strongly combated."

Miscellaneous.

The United States government "has been invited to send some men-of-war to Lisbon in July, 1897, to participate in the Portuguese celebration of the fourth centenary of Vasco da Gamas's departure for the discovery of India."

The International Association of Fire Engineers has been holding its twentieth annuall session in Salt Lake City, Utah.

Foreign.

Reports on the European grain crops are generally favorable. The wheat crop promises to be up to the average. Forage crops will be short in Great Britain if drouth continues.

Several special conferences between Prince Lobenoff-Rostovsky, the Russian Minister for Foreign Affairs, and the other ministers have resulted in a decision to continue the Behring sealing agreements of 1893 and 1894, "but to make overtures to the United States, Great Britain and Japan with the view to establish better protection for the seals."

There again has been a considerable reduction in the customs duty on corn imported into Mexico, and according to a report to the State Department by United States Consul-General Crittenden, at the City of Mexico, the rate of duty for August will be $1 per "corga" of 300 pounds, which is a reduction of forty cents per "corga."

According to San Francisco mail advices from the Orient the commercial treaty between Japan and Germany "has been approved by the Privy Council. The exchange of ratification is expected to take place within sixty days. While the terms of the treaty are not known, it is believed that Japan has conceded to Germany in the way of commercial privileges to German residents in Japan more than it accorded to Great Britain in the treaty made some time ago."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Partnership—Dissolution—Evidence.

After the dissolution of a partnership the acts or admissions of one partner are not admissible in evidence against his former copartners unless assented to or authorized by them, according to the decision of the Supreme Court of Minnesota in the case of First National Bank of Shakopee vs. Strait.

Partnership—Assignment—Property.

In the recent case of Farwell et al. vs. Brooks et al., the Supreme Court of Minnesota held that a deed of assignment by partners for the benefit of creditors, in order to be valid, must on its face be sufficient to assign not only the partnership property, but also all of the non-exempt separate property of each of the partners. In this case the court held that an assignment executed as follows: "Brooks & Co., by W. M. Brooks, J. A. Brooks," did not pass the separate property of W. M. Brooks.

Homestead—Husband and Wife.

The Kentucky Court of Appeals held, in the recent case of Mason vs. Columbia Finance & Trust Company, that where husband and wife owned adjoining tracts of land which were cultivated as one farm, the fact that the dwelling-house in which they resided was located upon the wife's part of the land did not deprive the husband of the right to the homestead exemption out of that part of the land owned by him, as they were to be regarded as residing upon his land within the meaning of the homestead law.

Husband and Wife—Creditors.

The Kentucky Court of Appeals held, in the recent case of The Brooks Waterfield Company vs. Frisbie, that an insolvent debtor will not be allowed to place his earnings beyond the reach of his creditors by conducting business for his wife, who has been empowered to trade as a femme sole, and that when the wife's estate employed in such a business has been increased by the labor and skill of the husband, the wife herself giving the business no attention, the husband will be regarded as having an interest in such increase, which may be subjected by his creditors, and the fact that the husband engaged to render service at an inadequate price cannot change the principle involved.

Debtor and Creditor—Mortgage.

The Supreme Court of Georgia held, in the recent case of Savannah Savings Bank vs. Logan, that where a debt, including both principal and interest, and due by installments, if paid according to the terms of the contract, is free from usury, the transaction is not rendered usurious by the voluntary payment of the debt in full before some of the installments matured, although, as a result, the creditor would receive, in the aggregate, a sum amounting to more than the principal and the maximum legal rate of interest, and that the threat by a creditor holding such a debt, which was secured by a mortgage, of foreclosure if the installments past due were not paid, and his refusal to cancel the mortgage unless the entire debt, including installments not due, was paid, did not amount to duress, nor render involuntary a payment of the debtor entitled to a rebate of interest on the matured installments.

Railroad—Mortgage—Action.

The Kentucky Court of Appeals held, in the recent case of Schmidt vs. Louisville, Cincinnati & Lexington Railway, that one who, although not a party to a suit, files an answer in the name of the defendant, employs counsel to make defense and controls the defense from the time of service of process, is bound by the judgment rendered against the defendant in whose name the defense was made; that in a suit by mortgage bondholders against a railroad company to subject the defendant's net earnings from business coming to it over a road which it had leased from the company which issued the mortgage bonds, a corporation which had purchased defendant's road, including its lease and all its franchises, having made defense in the name of the defendant, was bound by the judgment requiring defendant to pay into court the earnings sought to be subjected; that as the company which controlled the defense was to be regarded as already a party defendant and bound by the judgment, the court properly rejected an amended petition seeking to make it a party; that the proper course would have been either to institute a separate suit against that company, setting up the record in this suit and the facts connecting that company with this litigation, or to proceed against that corporation in this suit by rule based upon an affidavit stating those facts, and that if that corporation had not been bound by the judgment it would have been too late, after appeal and judgment, to bring it into the litigation.

Railway—Accident—Employee.

In the case of Puffer vs. Chicago Great Western Railway Company, recently decided by the Supreme Court of Minnesota, it appeared that the plaintiff, while employed as a brakeman by defendant in its switch yard coupling an engine to a train of freight cars, received an injury by having his hand caught between the bumpers. He claimed that it was caused by the negligence of the engineer in jerking or suddenly stopping and starting the engine while plaintiff was standing on the foot-board at the end of the tender, stooping over (without having a hold of the hand rail) and attempting to make the coupling while the engine was still in motion approaching the car, and that such sudden stopping or jerking threw him off his balance, causing him to throw his hand on the bumper of the car, where it was caught by the bumper of the engine before he had time to take it away. The court held that there was no evidence to show that such sudden stopping or jerking was anything more than ordinarily occurs in the business of switching and coupling cars, the risks of which plaintiff assumed, or to show that the engineer was negligent, and that plaintiff could not recover.

Employer's Liability—Railroad—Accident

The Supreme Court of Georgia held, in the recent case of Worlds vs. Georgia Railroad, that when one enters the service of another, he impliedly assumes the usual ordinary risks incident in the employment about which he is engaged; that in discharging the duties which he has undertaken to perform, he is bound to take notice of the ordinary and familiar laws of nature applicable to the subject to which his employment relates; that if he fails to do this, and in consequence is injured, the injury is attributable to the risks of the employment, and the master is not liable; and that where an employee of a railroad company, in the discharge of his duties, is directed to lift and carry an ordinary object, like a cross-tie, he is bound to take notice that it is heavy, and that a certain amount of physical strength will be required to accomplish the task; and if he misconceives the amount of physical strength to be exerted, and overstrains himself in lifting the tie and is thereby injured, the master is not liable, and the fact that he was acting under the orders of a superior at the time does not alter the question, even though he might have had reason to believe that disobedience of the order would result in his dismissal.

Sale—Credit—Rescission.

The Supreme Court of Iowa held, in the recent case of The Kearney Miller and Elevating Company vs. Union Pacific Railway Company, reported in the Chicago *Legal News*, that a seller of grain on credit, who learns, while it is in transit, that the buyer is insolvent and intends to get possession with intent to defraud, may rescind the sale; that where a seller of grain, on learning that the buyer is insolvent and intends to get possession with intent to defraud, elects to rescind the sale, and stops the grain in transit, he cannot thereafter claim that by the stoppage he acquired a lien for the price as against one to whom the bills of lading had been transferred by the buyer as collateral; that evidence that a seller of grain, on learning of the insolvency of the buyer, ordered the carrier not to deliver it to the consignee, stopped the grain in transit and sold it as his absolute property, with full knowledge of all the material facts, sufficiently shows an election to rescind the sale; and that a seller, on rescinding a sale and stopping the goods in transit, should give notice to the buyer of an intention to resell. The court said: "The grain was sold as the property of the plaintiffs, without notice of any kind to the grain company or to the intervener. It is true, the right to sell may not have depended upon the giving of notice. But it is the better practice for the vendor who exercises the right of stoppage in transitu to give a notice of an intention to resell the goods, when it is practicable to do so. * * * And the fact that such notice is not given, if unexplained, tends to show an intention to rescind the sale. * * * According to the weight of authority, the mere exercise of the right of stoppage in transitu does not operate to rescind the sale; but that conclusion is for the benefit of the vendor, as it may be to his advantage to resell the goods under proper conditions and hold the vendee for the loss, if any, sustained by his failure to perform the contract. But until the sale is rescinded the vendee, or his assignee, has the right to take the goods on payment of the contract price; and, if the vendor does not then deliver them, he is responsible for the damage which results from his failure to do so. * * * Bet when the vendor rescinds the contract of sale, the right of the vendee to the goods is at an end."

BUSINESS NOTES.

Outlook for Spruce.

The *Northeastern Lumberman* says: "The sale of several million feet of spruce deals for the English market by the Bangor manufactories, the continued firmness of the British, French and South American markets for spruce lumber, and the continued demand in New York and Brooklyn markets for long lengths spruce plank, all tend to stiffen the markets. Manufacturers should hesitate to slaughter good spruce during the next few weeks, when by decreasing production for a short time, demand and supply will be so nearly even that fairly remunerative prices may be obtained for desirable lots of spruce."

Flour Consumption in Germany.

Of interest to American farmers is the announcement in a consular report to the State Department that Germany, hitherto practically a rye-eating country, is rapidly going over to wheat bread. The consumption of rye flour there is steadily decreasing, and that of wheat increasing. As the United States exports large quantities of wheat and wheat flour and scarcely any rye, the importance of the change is apparent. At present the United States follows Russia and the Argentine Republic in the value of wheat exports to Germany. American flour is more expensive than any other there, but the demand is growing and will have to be met.

Woolen Mills in India.

According to a statement issued by the India Office, there were six woolen mills at the close of 1895—"one in the 24-Parganas in Bengal, one at Cawnpore, one at Bangalore, one at Dhariwal in the Punjab, and two in the city of Bombay. The number of looms and spindles in 1895 was 531 and 17,244, and the value of the outturn is reported as about Rx.259,360. The fabrics made at present consists mainly of blankets, great-coats for the police and native soldiery, and materials for servants' clothing. Serges and other cloths and hosiery are also made of excellent quality in the Cawnpore and Dhariwal mills, but the manufacture of superior goods is as yet comparatively limited."

Japanese Transpacific Steamships.

The *Marine Review* says: "It is stated that the manager of the Japanese Mail Steamship Company has signed a contract with the Great Northern Railroad Company for establishing a line of steamers between Tokio and Seattle, Wash. A monthly service of a steamer each way will commence at once. It remains to be seen if this is another step in making the Great Northern Railway and the Northern Steamship Company links in a transportation system to girdle the earth, like the Canadian Pacific Railway, or whether Mr. Hill has gauged the possibilities of new Japan, and is getting in position to bring its products to an American market. In either case it ought to lead to the enlargement of the Northern Company's lake fleet."

American Railway Cars in England.

London *Engineering* says: "After a very long life the British railway carriage, with its independent compartments, begins to show signs of having passed its meridian. As travel becomes more extended, and journeys grow in length, its disadvantages are more generally felt. Privacy and exclusiveness are dearly purchased when accompanied by virtual imprisonment without food and warmth. A long journey in winter is a painful experience. Hence the great popularity of the American corridor trains with their freedom, comfortable temperature and excellent meals. At present there are but few of them, but they are so much appreciated that it is evident to the railway world that in a few years they must be adopted for all long-distance traffic, and with them the second-class must disappear."

California Redwood Outlook.

The *Northwestern Lumberman* says: "Redwood lumbermen of California do not hope to extend their sale of lumber in the east by the concession of a 60-cent rate to the Mississippi valley that the railroads have granted. The lumber from the big redwood mills in Humboldt county has to be dried at San Francisco, to which it is shipped by boat, before it can be shipped to the eastern trade, and the railroads will not give rates from San Francisco. Later on the railroads may be induced to do so, when they arrive at a better appreciation of the question, but great bodies move slowly, and California redwood lumbermen cannot depend upon what may be done in the future. Preparations are being made, so it is reported, to ship redwood shingles to the east on the reduced rate, and some of the mill men are planning to build dry kilns for shingles at their mills. It is not likely, however, that under present existing conditions redwood shingles will for some time be important competitors with white pine and Washington red cedar shingles in this territory."

Trade With Cuba.

The Philadelphia *Press* says: "The cargo of 6,000 bunches of bananas that arrived here yesterday (August 10) from Gibara on board the Norwegian steamship Bratten will be the last of the kind that will be imported from Cuba until the war is at an end. Under present restrictions imposed by orders of Captain-General Weyler the importation of this fruit from Cuba is now found to be unprofitable. The Bratten's capacity is over 10,000 bunches, and although she was detained in Gibara nearly three weeks she secured but half her cargo. There are a number of fruit steamships lying in Gibara awaiting cargoes, but they will be compelled to lie there for some time yet, as the bananas are being brought down from the closed ports in small lots by lighters. Captain McKermann, of the Bratten, says that the people in Cuba are at present in a miserable condition. There is absolutely no business being transacted. All the principal plantations have been destroyed."

Spanish Expenditures.

The London *Times* says: "The large expenditures of the Spanish government upon warships is attracting a good deal of attention. The Marine Department has given out a contract for two torpedo-boat destroyers at a price equivalent to some £60,000 dearer than the tender of one of the leading firms in this class of naval construction in Great Britain on the plea of quicker delivery. It is also publicly stated, and repeated in the press without any contradiction on the part of the government organs, that the Minister of Marine has purchased from a firm of shipbuilders in Genoa two cruisers of under 7,000 tons displacement, with a speed of twenty miles, for the enormous sum of 42,000,000 pesetas, representing at the exchange of the day over £700,000 sterling for each vessel. Nothing short of panic can explain such prodigal expenditure of public money."

Cotton Crop Affected.

According to the weekly report issued by the Weather Bureau, "intense heat and general lack of rain, conditions which characterized the preceding week in the southern states, have continued during the week ending August 10, and have affected the principal crops in that section very unfavorably. While the week has been excessively warm throughout most of the country east of the Rocky mountains, the injurious effects of heat upon crops have been largely confined to the southern states, and cotton is the crop that has suffered to the greatest extent. The cotton crop has deteriorated generally throughout the cotton belt. The intense heat and lack of moisture have caused premature opening of bolls and shedding, and in portions of Arkansas the plant on uplands is dying. In central and northern Texas and Oklahoma hot winds have seriously injured cotton, and under the most favorable future conditions the crop in Texas will be below the average. The general condition of the crop is much in advance of the season. North Carolina reports that the first bale has been marketed in that state earlier than ever known."

An Express Ocean Steamer.

The State Department has received a consular report on the new rolling steamboat designed by the French marine engineer Bazin, which is attracting the attention of prominent experts in the shipbuilding line. By this marked innovation in marine architecture a speed of about sixty miles an hour is promised, which closely approximates that made by the fastest express trains on the continent. The "rolling boat," as its name indicates, will not slide, as is the case with ships now existing, but will roll on the water by means of huge hollow wheels or rollers. The vessel consists of a large platform, holding the boilers, machinery, saloons, etc., which is supported on each side by movable hollow wheels. The power is used partly to propel the whole by means of screws or paddle-wheels, but principally to propel the rollers. Mr. Bazin claims to get rid of water friction and resistance, and, with a minimum of expense and power, to attain a 50-knot rapidity. The results which he has obtained with a model about four feet long on the lake at Vincennes has encouraged him to undertake experiments on a much greater scale, and he now has under construction at the St. Denis dock yard a rolling boat of 280 tons displacement to be driven by 750 horse-power, which will be utilized by a screw and three pairs of side rollers, each about 33 feet in diameter. This boat will make its first trial trip in a few weeks on the Seine, thence across the channel, and up the Thames to London.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The volume of business throughout the country is practically unchanged. New features do not point to improvement in prospects for fall business. Industries generally continue quiet, with more men idle than a week ago. The most significant feature was higher rates for money early in the week; some difficulty in obtaining time money. This has lessened with manifest reaction against free silver sentiment, which followed the silver demonstration at New York, August 12.

Jobbers in woolens are meeting immediate wants only. Receipts of new wools exceed sales, and manufacturers prefer to let holders carry the raw material. Jobbers of dry goods report no outlook for an active fall demand until after election. Higher priced cotton strengthens views of manufacturers but does not sell goods. Men's-wear woolens sell slowly for spring delivery. Cotton goods continue to accumulate notwithstanding restricted output.

Mercantile collections are difficult to make at Charleston, and at Atlanta they are poor. Jacksonville jobbers report remittances slow, as do those at Birmingham, and in the west, at Cleveland, Detroit, Milwaukee and St. Paul. There is little or no demand for iron or steel, notwithstanding the capacity of furnaces in blast was restricted during July more than 80,000 tons. Manufacturers of hardware and jewelry report business excessively dull. Crop reports from some portions of South Carolina are discouraging, while the vegetable crop in Florida has been greatly reduced by the drouth. Crop conditions in Alabama have fallen off within two weeks, and the Kentucky tobacco outturn has been reduced by the prolonged drouth. Wholesale dealers at Chicago and at St. Louis report moderate gains in distribution of dry goods, although the total volume of business is less than last year, and trade generally at those centers and vicinity remains at the dead level of nearby wants.

The brighter side of the picture is found in generally favorable crop conditions at the south, which have stimulated buying at Baltimore, Savannah, New Orleans and Texas. The early movement of cotton is pointing to improved mercantile collections. The financial situation at New Orleans is relieved by sugar bounty payments. Collections are improved at Pittsburgh, and there is a better demand for dry goods and shoes than last week. At Omaha wholesale merchants report a very general improvement. On the Pacific coast the wheat yield promises well in California, but general trade at Washington and Oregon cities is rather less active.

July gross railway earnings make a better comparison with last year than bank clearings, in spite of the midsummer quiet in trade. Total earnings of 119 roads for July aggregate $39,259,000, an increase of 4.1 per cent. over July a year ago, in which month earnings increased 8.5 per cent. over July, 1894. July clearings this year showed a falling off of 4.4 per cent. from July a year ago. Only one group (central western) shows a falling off from July a year ago. The grangers and Pacifics show heaviest gains. Total earnings of 113 roads for seven months this year aggregate $250,580,000, a gain over a year ago of 6.3 per cent., following a gain in 1895 over 1894 of 5.2 per cent.

Bank clearings totals throughout the United States aggregate only $849,000,000 this week, 7 per cent. less than last week, and 5 per cent. less than in the second week of August one year ago. As compared with the corresponding week in 1894 this week's total shows an increase of 7 per cent., and as contrasted with the like period in 1893, when exceptionally small bank clearings totals were recorded, this week's increase is 16 per cent. In the second week of August, 1892, the bank clearings' aggregate was $1,009,000,000. This week's total shows a decrease of 16 per cent. as compared with it. A striking feature is the generally downward movement of prices of staples, among them hides, shoes, wheat, Indian corn, oats, coffee, raw sugar, cotton, petroleum and iron. Offers for steel would have resulted in lower prices for it. Practically unchanged quotations are reported for print cloths, refined sugar, pork, lard and wheat flour.

There are 258 business failures reported throughout the United States this week, compared with 269 last week. The increase as compared with the corresponding total one year ago is 63, and as compared with the like total in 1894 this week's increase is 24. In the second week of August, 1893, there were 409 failures reported.

Stock prices at New York are strong at a decided recovery from the recent depression. The trading continues professional, and the buying is mainly by shorts, based on the apparent decrease in the chances of success by the free silver party. Money is firm at 6 per cent. on call, and lenders have been unwilling to make time loans. Calls for money for the crop movement tend to keep money firm. This aids in depressing exchange rates, demand sterling having fallen to 4.87¼, and importations of gold are talked of in the future.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 2,635,000 bushels, against 2,747,000 bushels last week, 1,824,000 bushels in the week one year ago, 2,979,000 bushels in the week two years ago, and as compared with 6,129,000 bushels three years ago. Exports of Indian corn have increased very heavily, amounting to 2,367,000 bushels, as compared with 1,257,000 bushels last week, less than one million in the week one year ago, 166,000 bushels two years ago, and 1,734,000 bushels three years ago.

General business at Toronto is quiet, merchants believing the fall trade will equal an average. Business at Montreal is quiet; sales are slow. Crop prospects in Nova Scotia continue satisfactory, as in Prince Edward Island also. General trade at Nova Scotia is fairly satisfactory. The New Brunswick hay crop is reported below the average. The total number of business failures in the Canadian Dominion this week is 35, compared with 35 last week, 29 in the week a year ago, 40 two years and 26 three years ago. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $18,513,000 this week, compared with $19,290,000 last week, and a trifle smaller total in the week one year ago.

FINANCIAL.

The Money Market.

Last Saturday's bank statement explains the closer working of the New York loan market better than anything else. The continued calls for money from Chicago, supplementing the demands from the south and west, are reducing the bank reserves, and would make higher rates necessary even without the sentimental influence of the silver agitation. On last Monday the banks generally raised the rate for call loans to 6 per cent. This caused some scrambling for money at the Stock Exchange, and the rate there temporarily touched 8 per cent. There has been no variation on the part of the banks during the week; but, on the other hand, stock market borrowers have had no difficulty in obtaining funds, and the advance has brought in from time to time a certain amount of outside money, so that bankers' balances at the end of the week have been lending at from 2 to 6 per cent. Time money, however, is very inactive. Institutions have generally shut down on this class of business, and borrowers, especially in the early part of the week, were unable to find any time money even at 6 per cent. and on prime collaterals. Later on there was some relaxation of this stringency, but transactions are still occasional and at full rates, while collateral is very carefully scrutinized. Foreign houses have made some loans of sterling or on notes with a gold clause, but the amount of such business is small. Commercial paper is at a standstill. Local buyers are out of the market, and the outside demand has dropped to nothing. Offerings are consequently suspended, and the only quotable rates are 6@8 per cent. At the end of the week the money market is sentimentally affected for the better by the better political outlook and a relaxation of the closeness with which money is held for time loans or in connection with commercial paper is looked for.

The New York Banks.

Last Saturday's bank statement produced an unfavorable impression, owing to the loss of $6,000,000 in legal tenders and the reduction of the deposits by $7,800,000. This movement represents the calling in of Chicago and other western deposits and the transfer of funds to the south. Loans were contracted by $1,198,000, and, as a result of the other changes, the surplus reserve fell off $3,913,000. The figures compare as follows with those of the preceding week:

	Aug. 1, '96.	Aug. 8, '96.	Changes.	
Loans	$469,535,900	$468,037,600	Dec.	$1,498,300
Specie	46,254,700	46,545,800	Inc.	291,100
Legal tenders	92,727,400	86,560,900	Dec.	6,166,500
Deposits	485,014,000	477,164,500	Dec.	7,849,500
Circulation	14,800,000	14,903,200	Inc.	103,200
Total reserve	138,982,100	133,106,700	Dec.	5,875,400
Reserve required	121,253,500	119,291,125	Dec.	1,962,375
Surplus reserve	17,728,600	13,815,575	Dec.	3,913,025

At the corresponding period last year the surplus reserve was $38,940,775, against $69,053,700 in 1894.

The Boston Banks.

	Aug. 8, '96.	Aug. 1, '96.	Changes.	
Loans	$162,001,000	$162,209,000	Dec.	$208,000
Circulation	10,209,000	9,986,000	Inc.	223,000
Deposits	97,627,000	97,483,000	Inc.	144,000
Due from reserve agts	19,884,000	19,036,000	Inc.	848,000
Legal tenders	7,248,000	7,399,000	Dec.	151,000
Specie	7,058,000	7,571,000	Dec.	513,000
Surplus reserve	1,111,457	1,576,143	Dec.	464,686

Foreign Exchange.

The market is a narrow one, the inquiry being restricted both by the absence of large buyers and by the firmness of money, which further restricts the volume of remittances. There has been also a good supply of commercial bills, and the participation of foreign interests in the stock market here has resulted in some offerings. Reports that the syndicate has been forced to draw a very large amount of exchange in order to break the market are ridiculed. Posted rates were 4.88½@4.89½ on last Sat-

urday. By successive reductions they were brought down to 4.87@4.88½ at the close of this week. Actual business for demand sterling fell from 4.88¾ to 4.87¼ @4.87½, though the market was a variable one, the appearance of a slight inquiry being sufficient to advance it.

4.87¾	4.87	4.86¼	4.86½	4.86¼	4.86¼

Closing quotations on Friday for other classes of bills were: Cables, 4.87½; commercial bills, 4.85½; francs, 5.18⅛@5.16¼; reichsmarks, 95⅛@95⅝.

The Bank of England rate remains 2 per cent. The bank this week lost £4,000 in specie. The proportion of its reserve is now 58.76 per cent., against 58.54 per cent. last week. In the London open market call money has been ½@¾ per cent. and discount ¾@⅞ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending August 7, 1896:

	1896.	1895.
Dry goods	$2,204,044	$3,078,992
General merchandise	4,206,454	7,234,466
Totals for the week	$6,410,498	$10,313,458
Previously reported	284,812,930	309,427,377
Since January 1	$291,223,428	$319,740,835

The exports (exclusive of specie) from New York to foreign ports for the week ending August 11 were $1,383,530 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$5,998,396	$6,111,882
Previously reported	228,579,142	204,627,987
Since January 1	$234,577,538	$210,739,869

Silver.

Prices for bars were a little easier in London this week on decreased demands and an augmented supply of the metal. The decline, however, was only ¼d.—from 31¼d. to 31d.—the New York commercial market following suit with a decline from 68½c. to 67¾c. Dealings in silver bullion certificates were affected by this, as well as by the unfavorable speculative outlook for silver. The transactions on the Stock Exchange here were for 84,000 ounces, at from 68⅞ down to 67⅞, with a recovery to 68.

THE STOCK MARKETS.

The New York Stock Market.

Speculation during the past week has been marked by a rapid and, in some cases, a very considerable reaction from the bearish tendencies of the preceding fortnight. On last Saturday, indeed, the bad bank statement and the fear of a closer working of the money market induced renewed selling and a further increase of the short interest. The large falling off in deposits and cash holdings, caused by the local troubles at Chicago, and the springing up of a demand for money in connection with the crop movement at the west and south, justify higher rates for money, and at the beginning of this week the banks, almost without exception, marked up the call loan rate to 6 per cent., while commercial paper has been unsalable, and it has been impossible to obtain time loans even at 6 per cent. on the best class of collateral. At the same time call money has been in fairly abundant supply, and borrowers have had no difficulty in making arrangements from day to day at 6 per cent. A further gratifying indication was the decline in foreign exchange, the rate for demand sterling falling to 4.87¼. Gold imports are even talked of, although the market for exchange is about 1 to 1½c. above the point at which gold could be brought into the country from abroad. The effect of the high money rates has also been seen in a certain amount of lending of foreign money in this market.

Relief from the fear of a money squeeze has doubtless aided the stock market, but the principal factor in bringing about the rally in prices is the more cheerful political outlook. On last Wednesday, indeed, the bears renewed their attacks upon prices, selling stocks rather vigorously, on the theory that the speech of the free silver candidate accepting the nomination would contain incendiary doctrines calculated to alarm investors here and abroad and to create further liquidation. The fact that the address was generally regarded as far from a success and as producing a rather feeble impression was, however, followed immediately by renewed covering of short contracts, as well as by speculative purchases for the long account in the stock market, which on Thursday and Friday exhibited considerable strength, with an appreciable further gain in prices. It must be noted, however, that the buying on which the market has improved during the week was in the main professional, and was supplied by the short interest. This fact would tend to show also that the preceding declines, apart from liquidation by timid holders, was mainly the work of the bears. Rumors have been circulated, with what degree of foundation it is hard to determine, that certain large interests which sold at the beginning of the recent decline have repurchased their holdings in the granger and other groups of securities, and there were also rumors, which, however, lacked confirmation, that a combination of important financial people had been formed to support the stock market and prevent further demoralization. London, while inclined to buy on the declines, has not been such an important factor, and the occurrence of another fortnightly settlement tended to check European activity here, although the market there tended to take the same more cheerful view of our political outlook that prevails here. On Friday the market was very strong on continued covering by shorts and purchases for long account by traders, though at the close prices eased off somewhat on the expectation of another bad bank statement for the week ending to-day.

The market has not been one in which particular features play any decided part. Certain stocks have, however, occupied a considerable share of attention. St. Paul, for instance, rose from 59⅞ to 65½, and reports were circulated that a leading financial interest has regained the stock it sold at the beginning of the depression. Burlington's rise from 53½ to 60 was assisted by the declaration on Thursday of the regular 1 per cent. quarterly dividend, instead of the expected reduction in the rate. Sugar was active, and was apparently supported by the insiders, reported interviews with the leading members of the management stating that the company was in excellent position. The stock rallied from 95 to 104⅛. Manhattan was weak, in the face of the recovery, falling from 80¾ to 74¼, rallying, however, on Friday to 78½, and there was continued pressure on Western Union, based on the idea that the Baltimore & Ohio's holdings of some 36,000 shares will be sold when the latter company is reorganized. There were unconfirmed reports regarding a receivership for the Louisville, New Albany & Chicago, in consequence of a dispute concerning the guarantee of branch line bonds. The prospect of a settlement of the southern rate situation had little effect on the stocks of roads in that section, nor does the street at large pay much attention to the fact that the slackness of traffic is producing an effect both on rates and in the volume of railroad receipts.

Boston Stock Market.

The market has been more excited this week, with values fluctuating under the influences brought to bear. The close shows more strength and a general recovery from previous declines. Atchison is fairly active and closes ¾ point higher than a week ago, with Chicago, Burlington & Quincy ½ point lower. Other shares advanced ½@1½ points. Copper stocks are firmer at the close, with Boston & Montana ½ point up under liberal trading. Sugar shows considerable fluctuation in price and active sales, with ½ point advance for the week. Bay State Gas has also been active and closes ¾ point higher.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending— *Price* *Aug.* 13, 1896.	*Price* *Aug* 6, 1896.	*Sales* *Aug.* 13, 1896.	*Sales* *Aug* 6, 1896.

General Mention.

The sale of the Philadelphia & Reading Railroad having been ordered to take place September 23, all holders of the first, second and third preferred income bonds, also of deferred income bonds, are notified that the third installment on the same, viz., $50.00 per $1,000 bond on first, second and third preference income bonds; $2.50 per share on stock, and $10.00 per $1,000 bond on deferred income bonds, being one-quarter of the entire assessment on said bonds and stock deposited under the plan, is called, payable at the office of J. P. Morgan & Co., Drexel & Co., Philadelphia, or J. S. Morgan & Co., of London, not later than September 4.

GENERAL TRADE DULL.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, August 14.—There has been a slow business noted in nearly all kinds of merchandise, and trade is dull. Money has advanced, and lenders have been hard to reach, particularly for time money. At the close there are some surface indications that the high point has been reached, and the supply offering is more liberal. Business is yet largely in the shape of renewals, mostly at about 6 per cent., although some ask as high as 9 per cent. on choicest collateral for four months' time. Mercantile paper moves slowly at 6@8 per cent. The boot and shoe market is yet quiet, although the factories are fairly employed on previous orders. Some samples of women's lightwear for the spring trade are being sold. Leather is in quiet demand, but the market is quoted steady. Hides have declined ½c. more under a very dull demand, and offerings are light.

Providence, August 14.—General business remains very dull, particularly in such lines as the manufacture of jewelry, hardware, machinery, cottons, woolens, etc. The largest file manufacturing concern in the world has shut down for a month. Notwithstanding the curtailment in cotton manufacturing, goods continue to accumulate and prices remain low.

Philadelphia, August 14.—Wool continues flat; no sales. Dry goods are very slow; the prospective fall trade is not encouraging. Petroleum continues dull, but steady. Leather and morocco are quiet, but firm. Boots and shoes extremely dull, with a decline in prices. Sugar firm, with an upward tendency. There is some demand for iron, but no activity. Prices are low, but steady.

Pittsburgh, August 14.—The demand for general dry goods and boots and shoes continues fair, and in volume the business done in these lines during the past week is larger than in the week previous. Other branches of business are dull, and on the part of many there seems to be a disposition to make no ventures until after the November election. Collections are reported improved. The local raw iron market continues at a standstill. There is practically no demand for any class of iron, and during the past week very few sales are reported. A majority of the furnaces are now shut down, with no prospects of resuming operations for some time to come. Prices remain unchanged.

Baltimore, August 14.—Business has been quite satisfactory. A unmber of southern buyers are in the market and are purchasing liberally, feeling encouraged by the condition of crops and the general outlook. Nearby merchants, however, are not very active as yet. The trade here fee hopeful of a good fall business.

West and Northwest.

Cleveland, August 14.—General business continues quiet and unchanged. Country collections are unsatisfactory.

Cincinnati, August 14.—General business drags. Country banks seek money to move crops.

Detroit, August 14.—Continued quiet prevails in trade circles generally, only staples moving in moderate volume. Collections show no improvement and are still unsatisfactory.

Chicago, August 14.—The dry goods trade is showing more animation, as a number of buyers have been in from the north, west and south, sales reaching a fair aggregate, but are lighter than for the same week last year, which was one of the best of the season. With clothing and shoe houses it has been a comparatively quiet week, as buyers have not started in, and are not expected before the first of the month. Orders are small, and interior retailers who bought goods some time ago are now having them shipped. Leather buyers are scarce, and tanners are doing little, but quote an easy feeling. Groceries show fair activity, but there is not the snap to the trade of a year ago. The feature of the pig iron trade is the sale of a round lot of northern iron of over 1,000 tons. Aside from this, there is no iron business. The feeling is easy. With the steel manufacturers orders are scarce, as consumers are at a loss as to how they will be able to sell their goods, hence they are disposed to hold off. General produce is slow, but advances are noted in butter and declines in eggs and potatoes. Wool receipts, 2,212,111 pounds. Demand for money is fair, and bankers are unusually cautious in making loans. Some require borrowers to sign gold notes, owing to the uncertainty regarding the free silver craze. Collections are slow.

Louisville, August 14.—While trade remains very quiet, a more hopeful feeling is expressed by jobbers, and general indications are rather more satisfactory. Collections are fair. Some damage to the tobacco crop by excessive heat is reported.

St. Louis, August 14.—Transactions in actual necessities show a slight betterment, but of a seasonable nature only, and conditions are nominally unchanged. Shipments of boots and shoes since the first of the year are about 365,000 cases, against about 382,000 cases for the same period of last year. There is a moderate increase in the demand for hemlock, harness and skirting leather. Otherwise the line is dull and featureless. Manufacturers of boots and shoes are fairly busy, and are receiving large consignments of finished goods from the east. The hide market is unsettled and depressed. Tanners defer purchasing, although offered concessions. Lumber receipts and shipments are light and prices low. The output of finished iron and steel is small, at unchanged values. A slight improvement is noted in the demand for galvanized sheets.

Kansas City, August 14.—Jobbing trade in all lines is quiet. Collections are fair.

Milwaukee, August 14.—Trade continues in a quiet strain and but little activity is noted, with the exception of some staple lines. Collections are slow.

Minneapolis, August 14.—Trade conditions show no general improvement, though some lines reported a fair volume of business. Wheat touched the lowest point ever known here, on the 13th inst.

St. Paul, August 14.—Grocery, dry goods and drug dealers report good trade. In no other line it is above fair, but it is expected that purchases later on will bring the volume of business for the season up to the average of the past few years. Collections, on the whole, are fair, but not so good as a week ago.

Duluth, August 14.—Business continues to be conducted on very conservative lines, and conditions are practically unchanged. The failure of a local bank to open its doors on Wednesday had only a passing effect on the situation. Transactions through the Board of Trade the past two days have been of considerable magnitude, the result of falling prices, wheat having touched the lowest point in the history of the grain trade here.

Omaha, August 14.—Business has shown improvement in all lines this week. Collections are fair.

Sioux Falls, August 14.—Trade in all lines is dull and the harvest is small. The wheat yield is short and of low grade. Other grains are better,

Corn is in first-class condttion. Collections are fair.

Southern Cities.

Charleston, August 14.—No material change is noted in wholesale trade, and little improvement in retail. Collections are very hard, and reports from crops are discouraging from certain sections, the result of too much dry and hot weather.

Savannah, August 14.—Trade and collections are fair, being good for the first three days of the week, but dropping off now. Cotton is beginning to come in ahead of the corresponding season last year. The trade say September collections will be good, owing to early cotton shipments. Naval stores receipts are about the same, but shipments heavier, with better prices.

Atlanta, August 14.—Trade is quiet and collections poor.

Augusta, August 14.—There is no material change in trade.

Jacksonville, August 14.—There is no change in general trade. Few vegetablea are in market, the drouth playing havoc with the crops. Collections are slow and business in a depressed condition.

Birmingham, August 14.—Trade is quiet and collections slow. Crop conditions have fallen off greatly within past two weeks.

Chattanooga, August 14.—No material change is noted in the state of trade.

Nashville, August 14.—Trade in all lines continues quiet, a natural condition for the season. Collections are equal to a good average. Money is in only moderate demand, and there is but little trading in real estate.

Memphis, August 14.—General trade shows no material change. Collections are slow.

New Orleans, August 14.—Country merchants are ordering very conservatively. Sugar bounty payments have greatly relieved the money market and restored confidence. Drouth has reduced the estimates on the cotton crop and has also forced the crop. Receipts of new cotton are steadily increasing and the market is easier. Sugar is dull and new rice receipts are well taken.

Galveston, August 14.—Trade is not yet active, but improving. Fall trade will not reach former expectations, owing to the short cotton crop. Still, an average amount is expected.

Pacific Coast.

San Francisco, August 14.—Fruit is ripening fast, and larger shipments are reported during the week than at any other time during the season. The grain harvest is about over and the yield averages well. The weather is favorable for workers in vineyards and orchards. The general business is dull. Collections are slow.

Portland, August 14.—There are no new features in Portland trade conditions. Oregon fruit is not bringing in very much money. The foreign flour shipments for August are much larger than usual. Three cargoes have been shipped during the first ten days of the month, one for South Africa, one for Vladivostock, Siberia, and a third for the Orient via Vancouver, B. C. Collections are somewhat slow.

Tacoma, August 14.—Trade is moving along very conservative lines, and locally is almost featureless. Furniture dealers and manufacturers report orders shorter than last year. The foreign lumber trade is quite good.

Seattle, August 14.—General trade for August is not showing up well in comparison with previous months. Forest fires have again started and are doing considerable damage.

Canada.

Toronto, August 14.—Wholesalers are complaining of quiet trade and poor payments. Travelers report orders for autumn goods nearly up to the average. Banks report many Americans opening accounts here, chiefly parties from Buffalo and New York.

Montreal, August 14.—General business continues quiet and featureless. Retailers complain of slow sales owing to the intensely hot weather. Travelers find orders small, and storekeepers are evidently purchasing for actual wants only. Crops promise a good average.

Halifax, August 14.—General trade is in a fairly good condition. There has been a brisk demand for sugar during the week, and collections are about up to the average. Crop reports from all parts of the province are satisfactory. Reports from Prince Edward Island are also of an encouraging nature, and good crops are promised. St. John, N. B., produce market is quiet and well supplied. Shipments of lumber to the United States are small and freights are very dull. The New Brunswick hay crop is expected to be below the average.

Dry Goods.

Trade continues to move slowly, with operations greatly curtailed. Operators do not like the outlook, and will only do a hand-to-mouth business as long as the uncertainty continues. Cotton fabrics are dull, and even the greatly curtailed production does not help the sale of goods. In all lines of trade buyers are purchasing very sparingly, and it is slow work reducing surplus stocks with this kind of a market. The advance in the price of raw cotton, while it strengthens the views of manufacturers, does not help the sale of goods. Printed fabrics move slowly, while the call for ginghams is indifferent. Dress woolens continue dull, with very little new business reported by agents. Jobbers also report a slow trade. The sale of men's-wear woolens for spring is very backward, and few orders have been placed, except for some low-cost cheviots.

Wool.

The demand continues confined to meeting immediate necessities, and it does not take much to supply buyers' present wants. Woolen goods sell slow, with much machinery idle, and, until trade in this respect improves, manufacturers show no disposition to buy wool. Stocks at the seaboard are excessive, and with arrivals coming forward much faster than sales can be made, the prospect is discouraging. Values are quoted nominally about the same in the absence of enough business to establish prices, but a buyer disposed to bid on any line could doubtless get concessions on domestic wools. There appears to be no market for these wools abroad, and, with American machinery idle, there is no place to sell them. Foreign wools are dull, but values are held firm by the steady conditions abroad. Sales are small of all kinds.

GERMAN TRADE VS. BRITISH.

Recently the Earl of Rosebery made a speech in formally opening a technical institute and art school at Epsom. Speaking on the subject of technical education at large, Lord Rosebery said: "In the first place, even if we were not exposed to foreign competition, the gradual decay of the apprenticeship system would necessitate in all our smaller towns, and, of course, in all our larger towns, some means whereby a man might be able to become a skilled artisan in his trade, and so obtain that capital which skill represents to the man who possesses it. But our present position is not one of being free from competition. Year after year our consuls and our various officials of the Board of Trade have called the attention of the community to the fact that we are no longer, as we once were, undisputed mistress of the world of commerce, but that we are threatened by one very formidable rival, at any rate; I mean Germany. A little book has been lately published called 'Made in Germany,' to which I think your attention ought to be called; but if that be too long to read there is an abstract of the arguments of the book in the last number of the *Review of Reviews* which I do think is well worth the attention of everybody who is interested in the prosperity of the country of which his prosperity is a part. The figures with regard to Germany are very simple. The heads of the indictment against ourselves are three. First, that the proportion per head of exported British produce is £8 1s. in 1872, whilst it had sunk to £5 11s. 3d in 1894. Of course, you may say that reduced prices account for some part of that, but I do not think you will find that decreased prices do account for it, when you observe the broad features of the balance of trade and also of the German increase of trade. Secondly, the imports of German manufactured goods into Great Britain rose from £16,630,000 in 1883 to £21,630,000 in 1893—an increase of 30 per cent. in ten years of manufactured goods into the country, which believed it had almost a monopoly of supplying the world with manufactured goods. The total imports into Great Britain declined in value £22,000,000 between 1883 and 1893 in gross, but the imports of manufactured articles increased by over £13,000,000. I think these are grave and striking facts, and it is not, perhaps, a time to inquire into the causes as regards Great Britain herself, but as regards Germany the causes are not far to seek. The fact is that for the last sixty, seventy or eighty years she has fitted herself by the most perfect system of technical education in the world, except, perhaps, the Swiss system, to be a great industrial nation. She has been slow, she has been patient, she has been laborious, she has sent clerks and agents over here who have taken what secrets we had to afford and have improved on them when they returned to Germany, and the result is that, though we have not lost our position, she is slowly—and not very slowly after all—creeping up to us. In some of our colonies, in India and in Egypt, which is under our tutelage for the present, German trade has greatly menaced British trade.

"Now," said Lord Rosebery, "we ought to consider what has led to this state of things. We have to form an educated public opinion in order to give an impulsion to governments, and I believe that is more likely to be performed by the study of the facts and the figures with regard to British trade and with regard to German trade, and also by studying in these smaller technical institutes what can be done to remedy it, than by any parliamentary action that is likely to take place. But, at any rate, we have a right to ask this. There are committees and commissions of inquiry without end. Some are indefinitely postponed, but some are pressing and immediate. Surely an inquiry might well be instituted which might be short, which might be practical, and which might be exhaustive, into the causes of the decline of British trade and the alarming increase of our foreign rivals. We shall, I believe, find this as the summary: Ever since the conquest by Germany of Austria she has silently and quietly fitted herself for two great wars. One of them she has accomplished. The war she has accomplished was the great war for the consolidation of Germany. The war which she is accomplishing, and which, in my opinion, is the only meritorious war in which any nation can engage, except under pressure of necessity, is an industrial war. (Cheers.) And in that I think and fear, though with the heartiest wishes for her welfare, that unless we take precautions in time she is not unlikely to succeed also."

THE MINES IN CANADA NOW.

A Port Townsend, Wash., telegram to the *Herald* (N. Y.) says: "The richest gold placer mines of Alaska have been transferred to the Canadian territory, and miners are paying miners' tax to British authorities. The territory in question is from three to eight miles in width and embraces rich placer claims on Glacier and Miller creeks, which were heretofore supposed to be in Alaska territory, but now miners learn that they are subject to the laws of Great Britain. These statements were made by Captain William Moore, Canadian mail carrier between Victoria and Fort Cudahy, N. W. T. He has just returned from taking the first mail to the Yukon miners in British territory. Errors in the old survey were discovered last autumn and during the winter by Prof. O'Gilbie, who has charge of the corps of British engineers now engaged in locating the boundary between the two countries, and correction was made at once, transferring from three to seven miles of territory from Alaska to Canada. More than two hundred miners were affected, whom the Canadian mounted police immediately compelled to pay miners' taxes. That portion of the Yukon embraces the most valuable mining property in Alaska and affects water rights of forty streams of Miller creek. It appears that the miners concluded that the United States government did not care for the territory, inasmuch as Prof. O'Gilbie was permitted to locate such boundary lines as he chose without assistance or presence of American officials, and no efforts were made to prevent the police enforcing their regulations in that portion of Alaska territory."

AN IRON INDUSTRY FOR NEW ZEALAND.

The London *Iron and Coal Trades Review* says: "It is intended to resume the manufacture of iron and steel in New Zealand. We say resume, because it is no secret that this is not the first time that an attempt has been made to carry on an indigenous iron industry in that colony. Previous attempts, however, have been founded on an imperfect system, a drawback which has now been overcome. The most interesting as well as the most important of the iron deposits of New Zealand are the iron sands at Taranaki, which extend for many miles along the seashore, and which are exceptionally pure and rich. Until now it has been found a very difficult matter to utilize these deposits, for reasons which can easily be understood by the practical man; but Mr. Metcalfe Smith has overcome this difficulty by a synthetical process of building up an artificial ore, in the form of a briquette, and arrangements have now been made to start works to carry on the iron manufacture by this system. Mr. Metcalfe Smith's process was described in a paper which he read in May of this year before the Iron and Steel Institute, and which at the time was published in the *Review*. We need not now do more than indicate that the process appears to have all the elements of success, and that we are likely to witness before long a successful rival in the Britain of the Austral continent. Whether this rival can or cannot do more than

supply local needs in iron and steel remains to be seen. Those needs, however, are already very great, and are likely before long to considerably increase. If New Zealand were within a reasonable distance of Europe it would unquestionably become one of the richest and most populous countries on the face of the earth. As it is, the building up of its industries and population may be a slower process, but it is certain to be achieved. No country has a finer climate or more abundant natural resources."

AMERICAN PETROLEUM IN GERMANY.

The *Oil, Paint and Drug Reporter* says: "Some interest was excited in the petroleum trade last week by an article cabled from Berlin to the effect that the German government had again ordered that reports be submitted to it on the importation of petroleum, and inferring that the evident intent of the investigation was the introduction of a differential tariff. The item also assumed that the matter is revived with a view to breaking the monopoly of the Standard Oil Company. It is not quite clear what this means, but it is presumably intended to convey the idea that there is to be an increased measure of protection to the German refineries, and, in fact, we believe this will result in some measure from the new tariff which goes into effect in September. It does not appear, however, that it has been the intent of the government to discriminate against American oils, which would clearly be the result of any legislation aimed at the Standard Oil Company, since whatever rates of duty or regulations affecting imports were adopted would necessarily bear equally upon all importers of American oils, whether they represented that company or the outside interests. Doubtless the Standard has, by its recent arrangement with the large distributing firms, greatly strengthened its position in Germany, and has identified itself more closely with that export outlet. Its policy in that respect has been apparent for several years past, and, in view of the vast importance of the export trade to the American refiners, as well as producers, is as natural as was the establishing of distributing depots in this country. The latest dispatches from Hamburg are to the effect that the firm of John & Co. of that city annonnce the pooling of their petroleum business with that of Philipp Pots, of Mannheim, and the Passows, of Bremen. These firms will come to an agreement with the Deutsch-American Company regarding the prices of oil. To these facts is added the statement that 'part of the petroleum required by the pool will be bought from the Standard Oil Company.' It may easily be surmised from these facts, if they are entirely correct, that the Standard has formed an alliance which embraces all of the more important petroleum importing and distributing houses in Germany, and includes also the leading representatives of the German importers in this country. The importance of such a movement at a time when a new pipe line to tidewater is looked to facilitate the export movement of the independents is obvious. The Standard was already thoroughly intrenched in the French market, and now has established relations with the German outlets which probably cannot easily be overthrown, and which could only be paralleled by a prolonged effort at building up distributing houses capable to compete with those that are included in this so-called 'pooling' arrangement. Whether this move has been discounted by the people who have put through the new pipe line, or what disposition they will make of their runs of crude and refined at the seaboard is not known."

BRITISH TINPLATE INDUSTRY IN 1895.

The British Iron Trade Association in its latest presentation of statistics gives the following regarding the tinplate industry in 1895:

"The tinplate industry of the United Kingdom has not improved in tone or output during the past year. The total exports of tin and terne plates amounted in 1895 to 365,982 tons, as compared with 353,928 tons in 1894 and 379,172 tons in 1893. There was, therefore, a certain amount of improvement in 1895 on the exports of the previous year, but there was a considerable drop on the exports of some preceding years. This drop was specially marked in the official values, which only amounted to £4,244,795 for 1895, being a decline of over a million sterling on the estimated value of our tinplate exports of 1892. Despite the diminution of our exports to the United States—which only amounted to 222,901 tons in 1895, as compared with 226,880 tons in 1894 and 255,603 tons in 1893—the American demand absorbed 61 per cent. of our total tinplate exports in 1895, excluding Canada, which in the same year took 16,012 tons. As between 1893 and 1895 the Australasian demand has more than doubled, but, on the other hand, there was a decline in the Russian demand, which is the next most important after that of the United States.

"Assuming the home demand for tin and terne plates to be 125,000 tons, which is believed to be near the mark, the total consumption in 1895 would be 490,982 tons. This, although less than in some immediately preceding years, is double the consumption of less than twenty years ago.

"Export prices appear to have declined considerably in 1895 compared with the two previous years, the average export values having been as follows: 1893, £13.2; 1894, £12.3; 1895, £11.6.

"In 1890 the average official value of the exports of tinplates amounted to as much as £15 3s. 10d. per ton, so that there has been a decline in the interval of well on to £4 per ton.

"One of the most prominent features of the South Wales tinplate industry during the last twelve months has been the effort made to organize a system for the development of new markets in the East. The demands of the British East Indies have increased from 6,190 tons in 1893 to 7,923 tons in 1894, and to 11,255 tons in 1895. There is no separate record of the imports into China and Japan, or other Eastern countries; but our tinplate manufacturers are looking to these countries to largely increase their consumption in the near future."

MANUFACTURES OF VENEZUELA.

Venezuela is essentially an agricultural country; its factories are few, often of the crudest kind, and devoted to the manufacture of the most pressing wants, such as sole leather, soap, candles, matches, cigarettes, rum, native shoes (alpargatas), hats and sugar. The manufacture of sole leather, according to the United States consul at Puerto Cabello, appears to have acquired an impetus and support for which its large consumption and the high duty thereon seems responsible. Puerto Cabello supports two tanneries. As Venezuela exports large quantities of goat and deer skins and hides, suitable for uppers, the consul suggests that it might be profitable for some large tannery belonging to a country outside of Venezuela to establish a branch there for the purpose of preparing and exporting these articles. The duty on manufactured leather being at the rate of $4 per kilogram (2.2 pounds avoirdupois) and on the unmanufactured 50c. per kilogram, the poor people are practically debarred from its general use, and confine themselves, for ordinary wear, to the native alpargata, a modified scriptural sandal, composed of a solid piece of sole leather, shaped for the foot, with a woven cotton upper, having an outlet for the big toe, a piece of similar material secured to the leather heel, and then passed over and fastened to the upper part of the heel of the foot. The importation of sugar being prohibited, all large cane plantations have their sugar mills, with more or less advanced processes for placing the product on the market, but no refinery exists in Venezuela. Soap is made from native cocoanut oil, and candles from stearin imported from Europe. Both industries are not only among the most profitable, but also of the greatest magnitude in Venezuela, the high duty giving them a monopoly in the common classes of these articles. Fancy and perfumed soaps are not manufactured. Rum and cigarettes are made from native products. Tobacco of excellent quality is grown and employed in the manufacture of cigarettes, together with a considerable quantity of Cuban tobacco. Both industries are fairly profitable. The alpargata (shoe) is manufactured, or, rather, put together, by numerous small factories, the woven cotton being usually purchased from the large factory in Valencia, which makes a specialty of this article.

THE TREND OF COMMERCE TO THE GULF.

The *Age of Steel* says: "A celebration covering three days is to inaugurate the railroad connection of Iowa with Kansas City, Pittsburgh and the gulf. This through line to the sea will, when completed, not only facilitate the export of grain, etc., to the seaboard, but will, by reduction in cost of transport, add somewhat to the present scanty earnings of the farmer and planter. These will be among the more immediate advantages secured to the American producer; but as manufacturing enterprises develop in the southwest and contiguous territory, there can be no question as to the increasing commercial importance of all ports on the gulf coast that are by nature, or can be made by engineering skill, eligible for deep-sea trade. It is but a question of time when the commercial supremacy of some of our eastern seaports will be vigorously disputed, and products, both raw and finished, will be divided in their routes to the seaboard. It may not be so immediate or radical as some anticipate, and as the foreign commerce of the country grows the displacement of standard routes may not prove a factor of serious disturbance. There may be enough and to spare of activity for all deploying lines, but that some change is impending is beyond controversy. Rapid and economical transit between importing and exporting centers is one of the urgencies of modern international trade. The ball rolls that way, and will continue to do so till all trade of this nature has its finger and thumb in natural proximity. As indicating the trend of things in this direction, we note a quotation in the *Railway Age* from the *Manchester Guardian*. It says:

"'Arrangements have been completed for regular frequent sailings of steamers from New Orleans and Galveston to Manchester from the beginning of and throughout the coming season, and it is expected that the shipments of cotton and grain from the gulf ports to this port will be very considerable. With the exception of the fortnightly service maintained by Messrs. Lamport & Holt from New York to Manchester, no regular line of steamers has yet been established from a United States Atlantic port to Manchester direct. The district containing the largest manufacturing population in the world is taking practically its whole supply of American provisions, cattle, flour, etc., from Liverpool at a much greater cost for transport than if landed in Manchester. With the intention of making through traffic arrangements with some of the North American railroad combinations and of arranging for steamship lines from Atlantic ports, the manager of the Manchester Ship Canal (Mr. Marshall Stevens) will visit the United States in August. Traders who have experienced difficulty in obtaining shipments of their produce from any part of the United States direct to Manchester should now take up the matter with their shippers and sellers.'

"We may confidently accept this proposed movement as indicating in no uncertain fashion the future slowly rounding out for all eligible gulf ports."

SILVER AND GOLD HOLDINGS.

The *Boersen Courier*, Berlin, makes the following estimate of gold and silver holdings of leading banks of the world:

	Gold.	*Silver.*
German Reichs Bank	$145,500,000	$70,000,000
Other German banks	19,400,000	1,000,000
German Imperial war fund	30,000,000	----
Bank of England	284,400,000	8,000,000
Other English banks	40,000,000	----
Scotch banks	21,800,000	4,000,000
Irish banks	14,000,000	2,000,000
Austro-Hungarian Bank	114,000,000	54,000,000
Austro-Hungarian treasury	81,400,000	----
Bank of Italy	60,600,000	11,000,000
Bank of Naples	21,200,000	2,000,000
Bank of Sicily	7,000,000	400,000
Treasury of Italy	17,400,000	2,200,000
National Bank of Belgium	16,600,000	2,600,000

Australian banks	100,000,000	----
Totals	$2,291,400,000	$1,074,400,000

IMMIGRATION INTO BRAZIL.

The *Journal of the Society of Arts* says: "The tide of immigration into Brazil was very strong last year, the number arriving at Rio being 94,580, or 60,847 more than in 1894. In reply to numerous inquiries that have been made to the consulate at Rio, Consul Wagstaff says that intending emigrants to Brazil have been strongly advised to give preference to British Colonies, Canada, the United States or South Africa. Emigrants undergo terrible hardships from the time they leave their homes until they reach Rio de Janeiro, where they are landed at Ilha das Flores (an island in the bay), which offers accommodation for about 1,500 persons, though 2,000 to 3,000 are sometimes quartered there under insanitary conditions. The rate of mortality among children has lately been very high there. Immigrants are supposed to remain there ten days or a fortnight, but they sometimes remain two to three months. There is also a station at Pinheiro (state of Sao Paulo), where the immigrants are also subjected to great inconveniences. During the period from 1890 to 1895 505,286 immigrants passed through the depot at Ilha das Flores, of whom 136,262 shipped independently, the remainder having come on contract signed in Europe. Only 124,071 of these persons landed for settlement in Rio de Janeiro. The immigrants best suited to the condition of life in the Brazilian climate are Italians, Spaniards and Portuguese. Large numbers of Austrians also arrive. The first named go to the coffee plantations in the states of Sao Paulo, Espirito Santo and Minas Geraes; the Spaniards and Portuguese to the northern states, where sugar, cotton and tobacco are raised; they also settle in the state of Rio de Janeiro and the Austrians in Paranà and Santa Catharina. The most healthy states are in the south, where the same system of agriculture is pursued as in Europe, producing cereals and wine, and in Rio Grande do Sul, tobacco also. Settlers in those districts are better off than those in other provinces, but the absence of roads for marketing produce is a serious hindrance to improving their position. Finally, when the immigrants are definitely settled, their condition, especially in the coffee districts, is a hard one, and they seldom become the possessors of land. After deducting cost of living, rent and use of implements from their share of the crops, the savings are exceedingly small."

AGRICULTURAL CONFERENCE.

A Berlin cablegram says: "A select conference was held on Thursday evening at the residence of Professor Sering, of the Berlin Academy of Agriculture, at which were present, among others, Dr. Thiel, First Councillor of the Ministry of Agriculture, and Dr. Schumacher, who has made two official visits to the United States for the purpose of studying its agricultural conditions; Mr. Turke, of the Eckert agricultural machinery manufacturing firm, and Mr. David Lubin, of Sacramento, Cal., as the representative of the Patrons of Husbandry. Mr. Lubin submitted a series of questions for discussion connected with the decline of prices in the agricultural product of the world.

"Among the number of remedies suggested were the remonetization of silver at a ratio of 16 to 1 and the establishment of the free-trade system. Professor Sering delivered an address in which he expressed his belief that the prices of agricultural products had reached their lowest figures, and it was possible that they might remain stationary for a long time.

"Alluding to Mr. Lubin's contention, which was that if their efforts to establish a free-trade system should fail, the farmers of the United States ought to be granted bounties upon their exported products by the government, Professor Sering warned him and the rest of his hearers that if such a system of bounties was established it would immediately elicit strong retaliatory measures in Europe, and perhaps cause the creation of a protectionist union of the European countries against the United States. It was a mere delusion, he continued, for the agriculturists of the United States to suppose that France and Germany could be starved into surrendering. The Argentine Republic and Russia, he said, could provide an ample supply of wheat, meats, etc., for an indefinite period.

"Dr. Schumacher concurred in Professor Sering's opinions, and contended that the coinage of silver at a ratio of 16 to 1 in the United States would necessarily induce a very serious economic conflict with Europe. Mr. Turke, whose commercial connections are chiefly with the Argentine Republic and Russia, expressed himself as convinced that both of those countries were only beginning their career as grain providers of the world. Russia, he said, was developing in the production of grain amazingly, and he predicted that within a few years the whole of Southern Siberia would become a serious competitor in supplying Europe and the rest of the world with cereals.

"Professor Sering suggested the creation of an international alliance of the agrarians of the world, with a central bureau in London, Washington, Berlin or Paris, and that the alliance hold an annual meeting of delegates.

"Baron von Hammerstein-Luxten, the Minister for Agriculture, who was not present, had previously received Mr. Lubin, who was introduced to him by Ambassador Uhl. Upon that occasion he declared that he was in full sympathy with Mr. Lubin in the latter's anxiety in regard to the decline in the prices of agricultural products. Prussia, he said, was suffering equally with the rest of the world from general depression of business and prices. He added that he was glad that Mr. Lubin was about to discuss with the leading economists of Germany the problem with which they were confronted."

LANGUAGE IN TRADE.

Joseph G. Donnelly, United States consul at Nuevo Laredo, Mexico, has furnished the State Department a communication on the importance and necessity of an acquaintance with the Spanish language as an important factor in securing trade with the Spanish-speaking countries that should receive the careful consideration of those of our merchants and manufacturers who desire to promote trade with Mexico, Central and South America. Consul Donnelly calls attention to the fact that, notwithstanding the advantages of geographical position, our trade with Mexico and other Spanish-American countries is surprisingly small. These countries are our neighbors and natural allies. Their ports are much nearer to ours than those of Europe, yet Europeans get there ahead of us and take from our very doors the trade that should be ours. The feeling of the people of those countries towards the people and government of the United States is in the highest degree friendly, and they would prefer to trade with us than to deal with Europe, if that could be done upon even the same terms and with the same advantages now derived from dealing with Europeans. There is, of course, good commercial reasons for this preference for European dealing, and one of the principal obstacles to the extension of American trade in that quarter is the ignorance of Americans of the Spanish language. European agents are familiar with that language, and Americans have paid no attention to the importance of this requisite to trade. We do more business with 5,000,000 of English-speaking people in Canada than with the 35,000,000 of Spanish-speaking people in Spanish America. The reason for this is plain—we can talk with the Canadian and they with us, a fact which justifies the conclusion that trade follows language.

Consul Donnelly makes this fact apparent by briefly and skillfully reasoning from a few facts. Taking Mexico to illustrate his theory that trade follows language, the consul says: "Here, within a few hours ride by rail from our frontier, are 14,000,000 people—one-half of the population of England; a people advancing marvelously in all the arts of civilization, a people who will soon require as necessities what are now luxuries, who will be housed, fed and clad as well as any people of Europe. What a field this would be if worked with that skill and industry and tireless vigor which have made our domestic trade the wonder of the world. But it is not so worked. Ignorance of the language makes our usual business methods impossible. The Spanish tongue builds about the country for American trade a barrier bigger than the tariff. To many of our merchants Mexico appears to be as remote as China or Japan, and they strive for her trade by methods that might serve with countries of the Orient. They depend upon consuls for information, an effort which, to be of any avail, should have the full time and best energies of competent Spanish-speaking agents. Almost daily the mail brings to my office letters containing circulars which I am requested to distribute among Mexican merchants. Some of these are in English and are utterly useless; the rest, in Spanish, have even less effect than circulars at home.

"Would any manufacturer of mining machinery send as agent to Cripple Creep, for instance, some Russian emigrant, whatever his fluency in his own tongue, who is ignorant of English? Yet American agents and principals, too, come into Mexico from the United States knowing as little Spanish as they know Sanscrit. Good talkers, these, around home, no doubt, but once across the Rio Grande, the alert, keen, quick-witted American is stricken dumb and tongue-tied. He readily turns his American dollars into Mexican pesos, but he cannot turn his English into Spanish. He goes through the land envying the graduate of an institute for the deaf. He may do some business—money and goods talk, but money and goods, be their merit ever so great nowadays, need the advocacy of a ready tongue. Be it known that in the ever quickening competition in Mexican markets circulars won't do, nor letters, nor the friendly offices of consuls. Mexican trade must be talked for, and it must be talked for in Spanish.

"The influence of language on trade is well understood in America; nowhere else is it so powerfully exercised. Talking business is our national gift. Surely this gift should not forsake us at our southern border. Ignorance of Spanish bars the way to intercourse with nearly half the people of our continent. Knowledge of Spanish takes down that bar and leaves clear to American methods the whole field of American trade. The Spanish is a beautiful language, musical and easy to learn. Its construction is simple, and, what is of no small moment to the student, it is pronounced precisely as written. An hour a day for six months should give a fair command of it to any young person of average intelligence. This is less time than is needed for learning short-hand, and the day is not distant—in fact, I believe it is almost at hand—when there will be more demand and better wages for the young man or woman who can read, write and speak Spanish than there will be for stenographers."

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, AUGUST 22, 1896.

As the date for the meeting of the sound-money Democratic convention at Indianapolis approaches the managers of the movement appear to grow more confident of the success of their efforts. They now look for a representation by full delegations of no less than thirty-eight states at the convention. As to what the outcome of the convention will be beyond the adoption of a sound-money platform nothing can yet be said with confidence. So far as can be learned, the majority of those enlisted in the movement are in favor of the nomination of a presidential ticket, but there are some influential members of the new organization who advocate merely putting forth a platform without nominating candidates. The time available for the calling of state conventions before the meeting at Indianapolis is very short, but the leaders of the movement are making the best use of it, and they are looking to see important results from the propaganda initiated by them against the Chicago ticket.

No indication of the attitude of the coming Democratic State Convention in New York has yet been given by the state leaders. Such of them as have not come out against the Chicago ticket are maintaining an attitude of very marked reserve. This is particularly true of Senator Hill, from whom no definite word has come for publication since the adjournment of the convention at Chicago. He manages to keep those interested in his attitude guessing; but it may be questioned whether the general public will continue to manifest interest in the senator's position if he should maintain his attitude of reserve much longer. Of the former leaders of the New York Democracy, one of the most prominent—ex-Governor Flower—is expected to be a delegate-at-large to the Indianapolis convention, while others will be otherwise prominent in the movement to defeat the Chicago nominees.

The campaign for McKinley and Hobart has been actively opened, though the candidates' letters of acceptance have not yet been made public. It is understood that Mr. McKinley has already read the last proofs of his letter and that it will be given to the press within a very short time. Those who profess to be informed as to its contents say that it will be very full and explicit in its discussion of the money question, though the tariff question will also be treated. The impression has gained currency that Mr. McKinley had delayed the publication of his letter until Mr. Bryan should have delivered his Madison square address, so that he might have an opportunity of noticing any statements therein that presented an appearance of novelty. That opportunity having been afforded him, there is, of course, no further reason for delay, and, in response to demands from many quarters, the letter of acceptance will be in the hands of the public within a few days.

In his Columbus speech, a portion of which is touched upon in another column, Senator Sherman, after describing the effect of free coinage upon pensions, upon savings banks deposits, upon insurance policies and upon salaries, dwelt upon the results it would bring about in the relations between employers and employees in industrial enterprises. He said that the greatest injury resulting from the free coinage of silver would fall upon workingmen. Their wages are now based upon money of the highest value, upon gold coin of standard value, but under free coinage of silver the value of the silver dollar would fall to 53 cents in gold, or the 100 cents of the gold dollar would be worth 194 cents of the silver dollar. "With free coinage of silver, the senator said, every workingman can and ought to demand enough silver for his daily wages to be equal to the purchasing power of his present wages in gold. The struggle between workingman and employer will then commence, and no one knows better than the workingman how difficult it is to get an advance of pay. We have strikes and strife enough now, when the workingman gets his pay in gold coin or its equivalent, but what will be the condition when he is paid in cheaper money of the same nominal amount, but of less purchasing power? Every sentiment of justice will be on the side of the workingman in his struggle for good money or increased wages in cheap money." This would be a pleasant prospect truly for industrial managers to face.

The meeting of the American Bar Association at Saratoga was rendered particularly noteworthy by the presence of Lord Russell, the Lord Chief-Justice of the United Kingdom, who delivered an address of much interest on the subject of international law, considered particularly with reference to its more modern developments. The subject was dealt with by the distinguished speaker with great clearness and discrimination. He took occasion to refer to the part played by the United States in shaping the tendencies of modern international law, and said that it was substantially true to say that while to earlier writers is mainly due the formulation of rules relating to a state of war, to the United States—to its judges, writers and statesmen—we largely owe the existing rules which relate to a state of peace and which affect the rights and obligations of powers which, during a state of war, are themselves at peace. The progress of the idea of arbitration as a substitute for war was treated with great care. The speaker, while revealing at every step a warm sympathy with the movement, did not omit to direct attention to the difficulties in the way of an immediate and extensive application of the principle of arbitration.

As was to be expected, Lord Russell's hearers were in hearty concurrence with the tone and spirit of his address, in many ways one of the most happily conceived ever delivered in America by a foreigner. The committee on international law recommended the concurrence by the association in the resolutions adopted by the American Conference on International Law, at Washington, some months ago, and this recommendation was adopted unanimously. The resolutions referred to declare that religion, humanity and justice, as well as the material interests of civilized society, demand the immediate establishment between the United States and Great Britain of a permanent system of arbitration, and the earliest possible extension of such a system to embrace all civilized nations, and earnestly recommend to the government of the United States, so soon as it is assured of a corresponding disposition on the part of the British government, to negotiate a treaty providing for the widest practical application of the method of arbitration to international controversies.

In addition to a review of the legislation for the year, the address of the president of the association, Moorfield Storey, contained some striking references to the need of reform in proceedings in regard to railroad reorganization. The president took for his text a recent statute of Kentucky which he regards as a step in the right direction, inasmuch as it enables the courts to protect the interests of investors by making every reorganization of a railway the subject of judicial investigation and securing for every interest a hearing. It is pointed out in the address that the great railway systems of this country have been built up and equipped with borrowed capital; that many of the securities represent investments of more than their face value, and that capital stock has been frequently issued without payment; often as a bonus to go with the bonds. In this way the money of creditors has been invested and the control of the property retained by the debtor—the railway company. Great systems of railroads have been built up by contracts between companies, sometimes in the form of leases, and sometimes of traffic agreements, carefully drawn by astute counsel, and providing for the protection of the properties thus consolidated in case of a failure to make the payments stipulated in the agreement, but the last three years have shown that these contracts cannot be enforced in the courts, that the rights they are intended to secure are not recognized, and that for all practical purposes the creditor is at the mercy of the debtor, and obliged to accept substantially such terms as the debtor chooses to offer. The president's criticism of some of the proceedings reviewed and his suggestions of reforms will, no doubt, attract their due share of attention.

Much gratification is expressed by State Department officials at the tone of Mr. Balfour's reference to the dispatch of Mr. Olney, which was said to be regarded by the Foreign Office as opening the way to an equitable settlement of the difficulties in the Venezuela boundary question. The subsequent correspondence regarding that question has not been given to the press, but the State Department has made public a dispatch from Secretary Olney to Minister Pauncefote acknowledging the receipt of a copy of a dispatch of Lord Salisbury relating to the proposed general treaty of arbitration between the United States and Great Britain. The Secretary says that so far as the Venezuelan boundary dispute is concerned, the position of the government of the United States has been plainly defined, not only by the Executive, but by the unanimous concurring action of both branches of Congress. A genuine arbitration, issuing in an award and finally disposing of the controversy, whether under a special or a general treaty of arbitration, would, Mr. Olney says, be entirely consistent with that position and would be cordially welcomed by this government. On the other hand, while a treaty of general arbitration providing for a tentative decision merely upon territorial claims, though not all that this government deems desirable or feasible, might, nevertheless, be accepted by it as a step in the right direction, it would not under the circumstances feel at liberty to include the Venezuelan boundary dispute within the scope of such a treaty.

OUR IOWA FARMER FRIEND OF SILVER AGAIN.

A letter from an Iowa farmer to the editor of BRADSTREET'S, with reply thereto, was published in these columns August 15. The letter deserved publicity because it contained some of the more common misconceptions concerning the meaning and effects of the free coinage of silver at the ratio of 16 to 1. A second letter from the same gentleman is given herewith for like reasons, together with answers to such portions of it as may seem to call for reply.

To the Editor of BRADSTREET'S:

SIR—I have your letter of recent date in reply to mine, and will try to answer it in the same frank spirit.

1. Free coinage of silver would put just that much more life blood to circulating here and keep the body politic from becoming gangrened. Yet, I have little faith in free coinage alone if $3.84 per capita is all we have in circulation, as Senator Vest declares, and interest-bearing bonds are increasing. The covert intimation in the question you ask, How the free coinage of silver at the ratio of 16 to 1 would put more money in my hands unless I earned it, borrowed it, or had it given to me?—has been recently revived as an argument against the free coinage of silver, and it has its effect, I admit.

2. When free coinage was stopped and silver demonetized the premium on silver bullion in Wall street was 3 per cent., and the price of my 25 head of horses averaged over $100 each. Demonetization caused the price of silver bullion to decline to not far from one-half, or below one-half. Did that not carry the prices of my horses to half? This is not a theory; it is a condition, and I have experienced it. Remonetize silver, and if the value would return to $1.29 per ounce (as before demonetization) and all other things were equal, would not the price of my 25 head of horses go back to $100? Not only that, but would not all the property of the poor man of the entire country command a better price to-day if silver had not been demonetized? If not, why did England send over Ernest Seyd with half a million to get John Sherman to do it? And has not England reaped 40c. of every ounce of silver dug from American soil since then?

3. You say there are more than $300,000,000 worth of silver in the Treasury which no Secretary of the Treasury has been able to force into the hands of the people. I will ask you to name the Secretary who ever even wanted to put this silver into the hands of the people, and what act he did to get it there? And what man of all the people who refused a silver dollar for anything the government owed him? I have been led to believe that the option to take gold or silver had been forced on the individual instead of left to the government, as it ought to be.

4. There is another way to get money than those you mention; that is, to steal it by demonetizing one-half the redemption money so the other half would have to do the work of both. If a halt is not called and the circulation increased we must die as did Rome, or I am not a judge.

5. I cast my first vote as a Democrat, I enlisted as a Democrat in 1862, and served my country as a Democrat. I see ourselves going down grade at a fearful rate, and if one word from even the lowliest should be left unspoken or unwritten, responsibility must rest there. I have no ambition except to live, so that when I have gone to rest it shall be well with me, because I have wronged no man. I will thank you if you can show me where I am wrong or in error. MC.

Blankville, Iowa.

1. Your inference that the free coinage of silver, 16 to 1, would "put just that much more life blood to circulating," meaning, thereby, that it would increase the amount of money in circulation, is open to question. How would the increased coinage of silver get into the circulation? If a silver mine owner took, say, $530,000 worth of silver bullion to the mint (under the proposed free silver legislation) and had it coined into 1,000,000 standard silver dollars, how would it get into circulation unless he expended it for merchandise, other property, or for services? The silver mine owner need not wait for free silver coinage to buy property or services. If he is able to purchase the same now, those who sell to him could be paid without waiting for silver legislation. It is difficult to understand how free coinage of silver will increase the amount of silver in circulation. It is not even proposed that the government shall buy silver and make it into dollars, as some seem to think; the silverites propose merely to let those possessing silver bullion have it coined without expense.

Whatever Senator Vest may have said about per capita circulation in the United States, the fact, shown by official reports, is that there were $22.96 per capita actually in circulation here in 1895, or $4.92 per capita more than was actually in circulation in 1873. Interest-bearing bonds have been needed to maintain the Treasury gold reserve for several reasons: (*a*) Because of the withdrawal by foreign investors of gold from the country 1891-92-93, etc., due to doubt of our ability to maintain the existing gold standard of value under the enforced heavy purchases of silver each month, required by the Sherman law. The panic of 1893 was one result of the restriction of credits which resulted from the prolonged pumping of silver into the panful of gold. After the panic and extreme depression of 1894, agitation for free silver coinage at the ratio of 16 to 1 became more pronounced, and the upward spurt of trade from March to September, 1895, fell a victim to it. Since the fall of 1895 so much strength as to number has been shown by free-silver advocates that trade, industry and enterprise still halts. (*b*) Meanwhile, with stagnating trade, for the causes named, governmental receipts (with legislative extravagance) have not been large enough to meet expenses. Tariff changes have added to this. (*c*) Foreign investors still demanded gold for holdings here, and some foreign nations gold with which to establish gold standards. Hence gold tended to go abroad, and the United States had to buy gold, if you please, to maintain its credit, its integrity, its common business honesty.

2. Let us get this question of the "demonetization of silver" straightened out. The American silver dollar was "demonetized," if you please, in 1834, under a Democratic administration, by the advice of Benton and Jackson, both Democrats. The ratio of the coinage of silver to gold had been 15½ to 1, but was changed to 16 to 1 in order to make gold the standard. This is from the official reports. You will find a good account of this Democratic "crime against silver" in John Sherman's recent speech at Columbus, Ohio, summarized in this issue of BRADSTREET'S. The second and really serious "crime against silver" was in 1853, and this was committed by a Democratic Congress. Then it was that subsidiary silver coinage was "debased" (less silver put in it) and its legal-tender quality limited to $5.00. The so-called "crime of 1873," therefore, fades into insignificance. By it the silver dollar, which years before had disappeared (being worth more than its parity with gold), was dropped out of the list of coins to be struck at our mints. None had been made there for years. The action was duly, deliberately and carefully discussed and debated.

It is worth explaining England did not send Mr. Seyd here to get John Sherman or anyone else to demonetize silver. Moreover, Mr. Seyd was not in America at that time at all. This silly claim has been explained repeatedly. So it cannot be the demonetization of silver in 1873 which has caused the price of your horses to drop 50 per cent., because silver dollars had been demonetized forty years prior to that date, and silver currency twenty years before. No, the decline in the price of silver, similar to that of the prices of your horses, is a coincidence, not a case of cause and effect. See BRADSTREET'S of July 18 for the cause of the reduction of the price of silver, and see the enormous displacement of horses by the introduction of trolley and cable street cars all over the country, not to mention competition from the bicycle, and the very general reduction of prices of all commodities, live stock and other products throughout the world of late years.

3. It is not incumbent on a Secretary of the Treasury to try to force any particular kind of money out of the Treasury; but, as you ask, it may be well to explain that Secretary Carlisle took unusual pains to force silver dollars out from the Treasury, in aid of the cotton planters, just two years ago, at a time when, owing to panic and disturbed trade conditions, southern banks were not able to make customary advances in currency to move the cotton crop.

BRADSTREET'S said, August 12, 1896:

It had become plain that few, if any, of the southern banks would, if they could, advance funds to cotton buyers to enable the latter to hold the staple for an advance in price, and recent disturbances among southern financial institutions began to raise the question how the cotton crop was to be moved at all. * * * But with southern banks using clearing house certificates, and in many instances permitting depositors to withdraw only trivial sums of money daily, the problem how to borrow $50,000,000 or more to move the cotton crop had become a serious one. It is with considerable pleasure, therefore, that BRADSTREET'S learns that an arrangement was made yesterday by the Secretary of the Treasury, in view of the emergency referred to, by which the government, on the deposit of currency with the Sub-Treasury at New York, will, on being advised of that fact, telegraph the Sub-Treasury at New Orleans an order to pay a like sum of money in silver dollars.

It was also reported in the daily papers recently that employees of the Agricultural Department at Washington objected to being paid their wages in silver dollars, when offered them, as a test of the popularity of that variety of money.

4. As just pointed out, no money was "stolen" by demonetization, because the acts of 1834, 1853 and 1873 merely recognized a situation which existed, recorded a condition which existed, when there was no silver in circulation. They resulted in no change. Many people are erroneously inclined to regard the function of gold as a measure of values as necessarly dependent in efficiency on the quantity of gold dollars in circulation, when (with checks, notes, drafts, etc., as representatives of money) it is largely the question of what *is* the standard—its qualities of fineness, weight, etc. Is there any special draft on the supply of alcohol available because alcohol is a standard of measurement for spirituous liquors?

5. The "down grade" on which the business of the country has been running is due for the most part to mistaken efforts of many honest and well-meaning people to fly in the face of well-settled laws of trade and finance. Unfortunately, it is not the majority of all the people who are at all times equipped sufficiently to perceive this. But in the end there will be only one result in an enlightened nation, and that end will not be the substitution of two measures of value for one, nor will it be a return to the ford from the bridge, to the stage coach from the railway, to the post from the telegraph or telephone, nor yet from the gold to the silver standard as a measure of value.

THE BEGINNING OF GOLD IMPORTS.

The most important financial event of the week was, without doubt, the announcement that an amount of gold had been engaged in London for shipment to this country. This was not unexpected, inasmuch as the exchange market has been steadily falling, and on Wednesday, when the transaction in question was announced, had reached a level at which demand sterling was only about ½c. above the point at which gold importations would naturally follow. The amount involved in the transaction was only $2,000,000, though on Thursday it was made known that some smaller amounts had been secured on the continent and would also be shipped to this country before the end of the week. Coming, as it does, when the Treasury gold reserve, under trifling though steady withdrawals, has shrunk again from $110,750,000 to nearly $104,000,000, and with the money market, both here and at other business centers, in such a firm and narrow condition, the knowledge that, notwithstanding the currency agitation and the unsettling of financial affairs in consequence of the political situation, it was still possible to obtain specie from Europe could not fail to be beneficial in its effect. It is true that Wall street, which at the moment, is in an unusually sensitive condition, seems to have misconstrued the incident. It was accepted in that quarter in the first instance as the beginning of an enormous inflow of gold from Europe, under the auspices of the combination of banks and bankers which has already taken such a leading and successful part in mitigating the tendency toward financial disturbance during the past month. The briefest investigation, however, did not confirm the idea that there was concerted action of this kind, or that the gold importations were made under conditions similar to those which have so often been effective in attracting gold from this country and transferring it to the treasuries and governmental banking institutions of the old world.

The fact of the matter seems to be that the gold importations which are now taking place are entirely natural, at least so far as freedom from inducements on the part of the combination of banks and bankers are concerned, and to be the result of the decline in exchange, or possibly of the small premium which has been offered in some quarters for "free gold," i. e., gold not withdrawn from the United States Treasury through the redemption of legal tenders. A satisfactory feature of the situation in this connection is that the decline of exchange itself is not attributed to interference with the market by the bankers' syndicate which was formed several weeks ago. According to the best information on the subject, it may be stated that the syndicate drew bills, or, in other words, went short of exchange, to the extent of only a few million dollars, and that no pressure on their part was necessary to produce the steady fall of the rate for demand sterling from 4.89 to 4.85, at which latter figure it sold on last Wednesday. The effective causes in this case have been the suspension of buying of exchange on the part of a number of large importing interests which are understood to be working in concert with the syndicate and the hardening of the money market,

which has made it more difficult for all classes of remitters to Europe to obtain funds with which to buy bills. Lending of foreign money here has also been an element in the case, though not to the extent which might be desired. It is, however, noteworthy that under the existing circumstances, and particularly while Europe has ceased to be a buyer to any extent of our securities, and while the supply of commercial bills, though larger than it was a few weeks ago, is still far from extraordinary in its character, such a marked decline in rates should have ensued, bringing the market here not merely within sight of gold importations, but to the actual point where such transactions have occurred. The fact that Wall street was disappointed because the movement that has just begun does not seem to be a concerted one on the part of banking interests need not be regarded seriously. The shipments that have just taken place may be regarded to some extent as forced, or, rather, as being a little in advance of the actual market conditions which would render such transfers profitable in a purely business sense. Nevertheless, the tendency of the exchange market, already referred to, has been in this direction, and though the demand sterling rate after touching 4.85 recovered over ½c., the opinion of banking authorities generally is that under present conditions the decline is reasonably sure to continue and to make further gold importations, possibly on a large scale, a feature of the financial situation throughout the ensuing autumn.

NET RAILWAY EARNINGS FOR SIX MONTHS.

Little surprise need be felt at the rather unsatisfactory showing made by gross and net railway earnings returns for the first half of the present year. In fact, in view of the conditions which have ruled throughout most of that period, it would be difficult to figure out any better result than that achieved. Heavy gains in gross and net earnings reported in the opening months of the year, due in some degree to an immense grain movement in the west, and also to comparisons being made with corresponding months a year ago in which transportation interests were very much depressed, were not maintained beyond the first of March, and the quarterly returns of gross and net earnings published in BRADSTREET'S of May 23 foreshadowed the unfavorable change which has occurred. It should not be overlooked, in this connection, that comparisons since the month of March have been made with a period one year ago, when general trade was experiencing a veritable boom. When the depressed conditions of general trade this year, due to heavy gold exports, the unsatisfactory Treasury situation, and the excitement incidental to a presidential year, are considered, it really would appear strange if a considerable falling off in transportation activity were not to be reported. That instead of a falling off in gross and net receipts from a year ago there should actually prove to be a gain is one of the highest proofs of the recuperative ability of this country in the face of unfavorable conditions.

The total gross earnings of 129 railroads for the six months ending June 30 aggregated $370,668,975, an increase of 4.2 per cent. over a year ago. Net earnings for the same period amounted to $107,986,965, a gain of 3.5 per cent. These gains, it should be remembered, followed gains in the corresponding period of 1895 of respectively 3.6 per cent. and 8.1 per cent. over the first six months of 1894, so that it will be seen that no ground has really been lost, and that, in fact, some progress has actually been made during the past six months. Naturally enough, the first half of the present six months was the most favorable one to the roads. Gross earnings for the first three months of 1896 increased 7 per cent. over 1895, while net earnings gained 9.8 per cent., but it should not be forgotten in this connection that in the first three months of 1895 railroad earnings gained only 1.6 per cent. in gross and 3.5 per cent. in net over the first three months of 1894.

The following table illustrates the tendencies of earnings in the various groups of roads during the first six months of the present year as compared with the six, nine and twelve months' periods of the year 1895:

The influence of the large grain movement in the early part of this year is traceable in the gain shown by the granger roads in gross receipts, namely, 12.5 per cent. In spite of a large falling off in the cotton movement, it will be seen that the southern roads approach most closely the gain made by the grangers with an increase of 9.8 per cent. The gains made on the other groups are, as a rule, considerably smaller than those just mentioned, varying, as they do, from only one-half of 1 per cent. gain on the trunk lines to 4.3 per cent. gain by the central western roads. Two groups (the eastern lines and the coal roads) show decreases in gross earnings for the first six months. In net earnings the showing is hardly as favorable on the granger roads as might have been expected, the increase amounting to only 6.9 per cent. The heaviest increase in net earnings is that reported by the southwestern roads, 17.5 per cent., and this is followed by the southern roads with 11.8 per cent. Among the groups reporting decreases in net earnings may be mentioned the central western roads, the eastern lines, the coalers and the Mexican group.

Following are the more important gains in gross earnings during the six months period:

Burlington, Cedar Rapids & Northern	$373,000
Chicago, Burlington & Quincy	924,000
Chicago, Milwaukee & St. Paul	2,074,000
Minneapolis, St. Paul & Sault Ste Marie	597,000
Illinois Central	511,000
Erie	733,000
Grand Trunk	389,000
Lake Shore & Michigan Southern	342,000
Michigan Central	420,000
New York Central	723,000
Pennsylvania (east of Pittsburgh)	747,000
Pennsylvania (west of Pittsburgh)	763,000
Chesapeake & Ohio	418,000
Louisville & Nashville	583,000
Norfolk & Western	1,247,000
Southern	356,000
Canadian Pacific	1,595,000
Northern Pacific	416,000

These 18 lines account for $13,000,000 of the $15,000,000 total gain shown on all roads. The heaviest gain is that made by Chicago, Milwaukee & St. Paul, reflecting the large spring wheat tonnage early in the year. The increase reported by the Norfolk & Western is, of course, due to comparisons being made with a period last year when the coal strike practically tied that road up. The large decreases are smaller in number and volume:

Cleveland, Cincinnati, Chicago & St. Louis	$272,000
New England	208,000
New York, Lackawanna & Western	245,000
Philadelphia & Reading	257,000
Houston & Texas Central	250,000
Southern Pacific system	870,000

Among the large increases in net earnings are the following:

Atchison	$1,132,000
Chicago, Burlington & Quincy	504,000
Minneapolis, St. Paul & Sault Ste Marie	395,000
Burlington, Cedar Rapids & Northern	157,000
Erie	392,000
New York Central	771,000
Pennsylvania (west of Pittsburgh)	331,000
Buffalo, Rochester & Pittsburgh	150,000
Central of Georgia	244,000
Norfolk & Western	258,000
Southern	209,000
Atlantic & Pacific	192,000
Canadian Pacific	570,000
Union Pacific	319,000

Some of the larger decreases will be found below:

Baltimore & Ohio Southwestern	$151,000
Illinois Central	273,000
Cleveland, Cincinnati, Chicago & St. Louis	151,000
New England	166,000
Northern Central	177,000
Central of New Jersey	330,000
New York, Lackawanna & Western	301,000
Philadelphia & Reading	217,000
Houston & Texas Central	259,000
Southern Pacific	345,000
Mexican Central	203,000

The very large increase shown by the Atchison system, it is hardly necessary to say, accounts largely for the heavy percentage of gain shown in the southwestern group.

MR. COCKRAN'S REPLY TO MR. BRYAN.

Mr. Cockran's address at the Madison Square Garden was in the main devoted to an exposition of the effect of free coinage at the ratio proposed by the Chicago convention upon the condition of labor, and his treatment of the subject was not only convincing, as was to have been expected, but was simple and lucid to a degree rarely approached in platform discussions involving economic questions. The speaker led up to his analysis of the relations between a cheapened currency and the condition of labor by the statement that he regarded the rate of wages paid to labor as the test of prosperity. Mr. Bryan and his Populistic followers, he said, wanted to cheapen the dollar and to increase the volume of money, assuming that in some way the people would be benefited thereby. But, Mr. Cockran pointed out, it should not be forgotten that money and property are not identical, and there may be a very large volume of circulating medium and very great poverty. To take an illustration, the issue of paper money simply is no more an increase of wealth than the issue of an individual of his promissory notes would show an increase of his property. It is not, Mr. Cockran said, the volume of money but its activity that counts, and money can never circulate freely and actively unless there be absolute confidence in its value, for if a man doubts whether the money offered to him will be as valuable to-morrow as it is to-day, he will decline to exchange his commodity against it. The basis of all sound trade, he said, is sound money—money which is intrinsically valuable, money which, like the gold coin of this country, government could not affect if it tried to.

Now, touching the point as to how the Populists propose to deal with the question under discussion, the speaker said that their purpose is to put up the price of certain commodities. It is not pretended by them that, by the exercise of governmental power, they can create anything of value. If, then, they are going to enrich somebody, they must do so at the expense of somebody else. If, Mr. Cockran continued, everything in the country, including labor, were increased in value to-morrow in like proportion, nobody would be affected at all. It was not to be assumed that that was what was intended by the Chicago platform. The real purpose of the men who framed it was, he said, to increase the price of commodities while allowing labor to shift for itself. If the price of commodities be increased and the price of labor be left stationary, that means the cutting down of the rate of wages, because, if instead of a dollar which consists of a given quantity of gold equal to a hundred cents anywhere in the world the laborer is to be paid in dollars worth 50 cents each, he can naturally buy only half as much with his day's wages as he does now. So that the laborer is entitled to ask the Populist agitators where he comes in.

But, Mr. Bryan and those who stand with him say, wage-earners know that while a gold standard raises the purchasing power of the dollar, it makes it also more difficult to obtain possession of the dollar, renders employment less permanent, loss of work more probable, and reëmployment less certain. This means that a cheaper dollar will give more employment, more frequent employment, and a chance to get reëmployment after discharge. In other words, if the laborer is willing to have his wages cut down, he can get more work. There never was a head of an establishment yet who meant to make a cut in wages, Mr. Cockran said, who did not say the same thing.

Stated in brief form and stripped of the haze of verbiage, Mr. Bryan proposes for the laboring masses of the country that they take a dollar of less purchasing power, so that employment may become more certain and the chances of employment more frequent. This proposition is based on the theory that a diminution of the rate of wages increases the scope of employment, but Mr. Cockran explained clearly that, as a matter of fact, the reverse is true—the more abundant the product the higher the wages, and there cannot be an abundant product unless labor is extensively employed.

It is explained by the Populists, however, that the creditor is the objective point of their attack. It is his debt that is sought to be cut down, and when the system of coinage proposed by them shall have been completed, the debtor is to have an option as to which metal he will pay his debt in; in other words, he will be permitted by the law to commit an act of dishonesty. Mr. Cockran at this point takes up for examination the question, Who are the debtors and who are the creditors of the country? It is often assumed by the advocates of free coinage that the money lender and the creditor are identical, but as a matter of fact, Mr. Cockran says, the creditors of the country are not the bankers. The very business of banking is the business of being in debt; it is the business of dealing with other people's money, the money that is dealt with being owed to the depositors. The laborer, on the other hand, is always a creditor for one day's work, unless he is paid in advance, and he is usually a creditor for one week's work or two weeks' work, and every great industrial enterprise has for its chief creditors its own laborers. The Populist agitation, Mr. Cockran said, was an effort to enlist the farmer in a conspiracy to reduce the wages paid to labor, but while he condemned in scathing terms the class of "professional farmers," he paid a high tribute to the bulk of the farming community, particularly in the north, and declared that the conspiracy must fail.

The speaker directed attention to the fact that the Populist discussions proceed largely on the theory that classes are necessarily hostile to one another and that the condition of life is one of contest. He declared that the government should not be intrusted to the hands of men whose conception of civilized society was one of warfare and strife, for the very essence of civilization is mutual interest, mutual forbearance and mutual coöperation. "Underlying the whole scheme of civilization," said Mr. Cockran, in a striking passage with which we may conclude, "is the confidence men have in each other; confidence in their honesty, confidence in their integrity, confidence in their industry, confidence in their future. If we take a silver coinage to-morrow, if we even debase our standard of value, men say that still you would have the same property you have to-day. You would still have the same soil, you would still have the same continent, it is true. But so did the Indian have the same rivers that roll past our cities and turn the wheels of commerce as they pass. So were the mountains piled full of mineral treasures four hundred years ago. The same atmosphere enwrapt this continent, the same soil covered the fields, the same sun shone in heaven, and yet there was none but the savage pursuing the pathway of war through the trackless forest; and the river bore no single living thing except the Indian in his canoe, pursuing a pathway of destruction. There was no 'industrial coöperation,' because the Indian was a savage and did not understand the principles by which men aid one another in taking from the bosom of the earth the wealth which makes life bearable and develops the intelligence which makes civilization."

THE FACTS ABOUT THE RECENT DECLINE IN SILVER.

The fact that the silver market has been dropping steadily in the face of the free-coinage agitation has not escaped attention. At the end of the month of July the market quotation for commercial bars advanced to 69c. here and 31 7/16d. in London, and the trading in bullion certificates in this market was quite active at around 69@69½c. The continuous decline carried the quotations for bars down to 31d. and 67¾c. before the end of last week, while the last few days has seen a further shrinkage in the prices, 30⅜d. per ounce having been quoted in London and 66¼c. in New York, the fall in bullion certificates being even more marked, inasmuch as transactions on the Stock Exchange here in this class of silver values were made at 66c., a slight recovery both in the commercial and speculative forms of silver occurring at the very close of the present week.

This fall in silver has not been altogether understood in Wall street. The selling of bullion certificates was evidently the closing out of speculative holdings that had been acquired in anticipation of an active and higher silver market on the prospects of the success of the free-silver party. The "street" naturally formed the conclusion that the decline in the commercial price at London was also entirely due to the same cause, and, so far as the matter was discussed, it was generally regarded as evidence that the people interested in the silver market were disappointed with the political prospects in this country with reference to the free-silver propaganda and showed a disposition to get rid of the silver accumulated for a rise, in view of the probable success of the presidential candidate representing that cause.

Dealers in and authorities on silver, however, do not support this view, at least so far as the decline in silver has affected the commercial market. Indeed, the liquidation of speculative holdings of bullion certificates would seem to be in sympathy with the commercial prices. The opinion of the experts in this matter is that the Eastern demand for silver, especially for China, has fallen off, and that there being no speculative demand to take its place, a decline has ensued, carrying quotations to the lowest level of the year.

CHICAGO & NORTHWESTERN'S YEAR.

An unusually satisfactory yearly report is that of the Chicago & Northwestern Railway Company for the twelve months ending May 31 last. Few railroad corporations, in fact, show such favorable results for their fiscal years, though it must be noted that in this case the period covered by the returns was precisely that during which traffic and earnings throughout the western country were generally on the increase. The gains in earnings, both gross and net, shown by the Northwestern are certainly notable, the figures comparing, as follows, with those of the preceding fiscal year:

Year ending May 31.	1896.	1895.	*Changes.*
Gross earnings	$33,488,761	$28,108,374	Inc. $5,380,387
Operating exp. and taxes	21,448,971	18,511,728	Inc. 2,937,243
Net	$12,039,789	$9,596,645	Inc. $2,443,144
Gross charges	7,122,355	7,071,135	Inc. 51,220
Less credits	413,729	407,367	Inc. 6,362
Net charges	6,708,626	6,663,767	Inc. 34,859
Balance	$5,331,163	$2,932,878	Inc. $2,398,255
Sinking funds	220,990	325,830	Dec. 104,840
Surplus	$5,110,173	$2,607,048	Inc. $2,503,125
Income from investm'ts.	257,909	244,907	Inc. 13,002
Balance	$5,368,082	$2,851,955	Inc. $4,516,127
Dividends	3,517,057	3,125,546	Inc. 391,511
Surplus	$1,851,024	def. $273,590	Inc. $2,124,614
Western lines deficit	128,798	332,195	Dec. 460,993
Receipts from land sales	312,940	316,770	Dec. 3,830
Total surplus	$2,035,166	def. $289,015	Inc. $2,324,181

The ratio of increase in gross earnings was 19 per cent., but the net earnings increased no less than 25 per cent., although heavy sums were expended out of income for repairs and renewals, including betterments to the permanent structure and additions to the equipment. The outlay under the latter head was noteworthy, including $850,000 for renewals of freight cars, against $400,000 in 1895, and $319,000 for new locomotives to replace condemned ones, against nothing for this item in 1895. In addition to this, $350,000 was paid during the year for new cars, not representing replacements, and the construction account amounts in all to $1,601,198. It is also worth noting that of the total increase in the company's operating expenses for the year, labor accounted for $1,193,019 of the amount, indicating the enormous extent of the reduction in the number and salaries of employees during the depression that lasted from 1893 to 1895.

The most interesting figures of the report relate to the traffic and rates. The latter, indeed, show continued reductions. The average charge per ton per mile on freight carried was only 1.03c., against 1.14c. in 1895 and 1.07c. in 1894. The fare per passenger per mile was 2.05c., against 2.07c. in 1895, although this was better than in 1894, when the average passenger fare was 1.95c. per passenger per mile. On the other hand, the volume of the company's freight traffic was immensely larger, the total tonnage being 17,082,389 tons, against 13,822,906 tons in 1895 and 12,949,382 tons in 1894. The number of passengers carried did not, however, increase in this proportion, being 15,241,910, against 15,117,290 in 1895 and 17,082,400 in 1894, the latter largely representing, however, Word's Fair business. Applying the decrease in the average freight rate to the total tonnage, it is calculated that the lower rate was equivalent to a sum of $2,600,000 on the total earnings for the year. It may also be noted that the company is constantly working for greater efficiency in the conduct of its business, and that during the year there was an increase of 24 tons in the average train load, bringing the load up to 141 tons, which is the largest in the company's history.

The remaining figures are not particularly striking or important. The capital stock was increased $15,000 through the conversion of divisional bonds, and the funded debt decreased $136,000. The balance sheet shows a readjustment of various accounts, which in their general effect constitute writing off of nominal assets to the extent of $10,000,000, with a corresponding charge in the item cost of road. This, while a mere bookkeeping charge, is, nevertheless, in line with what is becoming the best practice in railroad accounting, and tends to eliminate the dangers of a "paper surplus."

SENATOR SHERMAN ON OUR COINAGE HISTORY.

Among the contributions to the political discussion now under way, a prominent place must be given to the address delivered by Senator John Sherman at Columbus, Ohio, where the campaign in that state was formally opened on Saturday last. It will not be necessary, as far as the readers of these columns are concerned, to review the senator's speech in extenso, but it will serve a useful purpose to recall the review given by him of the history of the coinage legislation of the United States, in so far as it concerns the ratio between gold and silver. Directing attention to the fact that both Hamilton and Jefferson, who were opposed upon so many questions, agreed upon the ratio established in 1792, he pointed out that at that time neither gold nor silver was found in any considerable quantity in the thirteen states then forming the Union. The revolutionary war had been conducted with paper money, which had become worthless, and the coins of Spain, England and other countries had been made a legal tender, and continued so for many years after the adoption of the Constitution.

Almost immediately after the new coins authorized by Congress were issued it was found that they were being exported, while their place in the circulation was usurped by the worn and abraded of other countries. This circumstance led to the first "crime" against silver—the suspension by President Jefferson in 1806 of the coinage of the silver dollar. From that date to 1836 no silver dollars were coined. Meanwhile France

and other countries had adopted the ratio of 15½ to 1, and England had adopted the gold standard. In 1834 Congress adopted the ratio of 16 to 1 by reducing the weight of the gold dollar. The effect of this act is thus described by Senator Sherman: "Silver could be coined in France at the ratio of 15½ to 1, and the owner of silver bullion could send it to France and have it converted into coin at that ratio, thus receiving about 3 per cent. more for his bullion than if coined at the American ratio of 16 to 1. Gold became the only American coin in circulation, and the avowed purpose of the passage of the law of 1834 was to make gold the standard." This was, in fact, declared by the committee of the House of Representatives who had charge of the bill, and who said in their report:

> The committee think that the desideratum in the monetary system is a standard of uniform value; they cannot ascertain that both metals have ever circulated simultaneously, concurrently and indiscriminately in any country where there are banks or money dealers, and they entertain the conviction that the nearest approach to an invariable standard is its establishment in one metal, which metal shall compose exclusively the currency for large payments.

This act was passed, it will be remembered, during the presidency of Andrew Jackson, and largely through the influence of Thomas H. Benton, both of whom were Democrats of the Democrats.

Subsequently, in 1853, when both branches of Congress were under Democratic control, that body reduced the quantity of silver in the fractional coins (half dimes, dimes, quarters and half dollars) more than 6 per cent., directed the purchase of the silver for their coinage on government account, abolished the law for their free coinage, and made them a legal tender for $5 only, leaving gold still practically the only full legal-tender United States coin. As a matter of fact, the silver dollar had long previously disappeared from circulation. The act of 1853 was, in effect, a completion of the act of 1834, and the purpose of its enactment was the same as is explained in the following statement by the chairman of the committee having the bill in charge in the House of Representatives:

> We propose, so far as those coins are concerned, to make silver subservient to the gold coin of the country. We intend to do what the best writers on political economy have approved; what experience, where the experiment has been tried, has demonstrated to be the best and what the committee believes to be necessary and proper—to make but one standard of currency and to make all others subservient to it. We mean to make gold the standard coin.

These citations made by Senator Sherman from the records of Congress seem to make good his contention, which is of high interest, in view of the peculiar circumstances of the present campaign, that the Democratic party during the years of its ascendancy in the politics of the United States was a gold party.

During the war period, of course, gold and subsidiary silver disappeared from circulation, as the silver dollar had years before, and paper currency was substituted. After the war a revision of the coinage laws was rendered necessary, in view of the need of getting back to specie payments, so as to redeem the promise of the government to pay its creditors in coin. A bill was prepared by Secretary Boutwell as early as April, 1870. This bill, like that of 1853, while providing for the mintage of subsidiary coins, omitted the silver dollar from the list of the coins of the United States. This bill was pending in Congress for three years, and was carefully considered in both houses, as Senator Sherman recalls; and he should know, for the measure was under his charge in the Senate. He says that special attention was called to the omission of the 412½ grains silver dollar, which was never in the bill at any stage, and the reasons for this omission given, and that it was finally determined, at the urgent request of members from the Pacific coast, to insert among the silver coins a trade dollar containing 420 grains of standard silver; but this dollar was made, like the minor coins, a legal tender for $5 only. In particular, Senator Sherman recalls the fact that the bill was specially supported and voted for by the senators and members from the silver states, particularly Senators Jones and Stewart, who have since become such ardent advocates of free coinage.

This portion of the senator's address constitutes, from the point of view of many, its most marked feature. It recalls in a striking way the historic fact, which has been too much lost sight of, that the coinage acts of the United States, in so far as they have affected the ratio between gold and silver, have been the result of a well-defined purpose, and that that purpose, so far as regarded the most important of them in fixing the position of silver, has represented the matured policy of the party, some of whose modern leaders have projected into a presidential campaign an issue which represents the widest possible departure from its ancient traditions.

MANHATTAN'S LATEST FIGURES.

Far more attention has been given by the speculative community to the quarterly report of the Manhattan Railway for the three months ending June 30 than is usually paid to the periodical returns of railroad corporations. In the case of the elevated system of New York city there is, however, reason for this interest in the record of its earnings. The adoption of cable power by both the Third avenue and the Broadway surface lines has cut seriously into the traffic of the elevated roads, and the reduction of their earnings has been of a character calculated to create doubt as to the ability of the Manhattan to continue the payment of 6 per cent. dividends upon its share capital. With each succeeding quarter, during the past year, there has been a free circulation of rumors that a reduction in the rate was imminent. Such forebodings have not, however, been verified, but the "street" finds in the continuous decline of the market price for Manhattan shares something like confirmation of its views on the future of the property. In February last the stock sold as high as 113. Since then it has fallen steadily, and by the end of July touched 90. In the recent slump of the stock market Manhattan took a conspicuous part and outstripped in its decline most of the weak members of the share list, falling on Friday, August 14, to 74. Since then the price has rallied to 77, but the comparative weakness of the stock, in the face of a generally improving market, has not escaped attention, nor does the fact that the quarterly report, to which reference is made in the opening sentence, present a somewhat better condition with reference to earnings than was expected seem to inspire confidence on the part of speculators, not to say investors, in the future of the property and the outcome as regards the market value of the stock.

The figures just made public are in the form of a regular quarterly report to the New York State Railroad Commission. They cover the three months' operations ending June 30, and permit a similar comparison of results for nine months ending June 30. The figures in tabular form are as follows:

Quarter ending June 30.	1896.	1895.	1894.
Gross earnings	$2,321,813	$2,403,987	$2,485,665
Operating expenses	1,385,915	1,399,546	1,440,120
Net earnings	$935,898	$1,004,441	$1,045,545
Other income	42,500	89,021	204,177
Total income	$978,398	$1,093,462	$1,249,722
Charges	616,799	713,662	656,418
Balance	$361,599	$379,800	$593,304
Dividends	450,000	450,000	450,000
Deficit	$88,401	$70,200	*$143,304

* Surplus.

Nine months ending June 30.	1896.	1895.	*Changes.*
Gross earnings	$7,183,138	$7,347,760	Dec. $164,622
Operating expenses	4,212,229	4,163,329	Inc. 48,900
Net earnings	$2,970,909	$3,184,431	Dec. $213,522
Other income	158,183	239,634	Dec. 81,451
Total income	$3,129,692	$3,424,065	Dec. $294,973
Charges	2,073,607	2,088,466	Dec. 14,859
Balance	$1,055,485	$1,335,599	Dec. $280,114
Dividends	1,350,000	1,350,000	....
Deficit	$294,515	$14,401	Inc. $280,114

According to these figures the road earned for the stock in the three months covered by the latest report about 1.2 per cent., while the dividend for that period, at the rate of 6 per cent. per annum, was 1½ per cent. In the corresponding quarter last year the amount applicable for dividends was 1¼ per cent. and in 1894 nearly 2 per cent., while in 1893, before the cable road competition had begun to affect the Manhattan earnings, the surplus was equivalent to over 2½ per cent. on the company's stock. Taking the record for nine months, it will be seen that the amount available for the dividends paid during the period in question was only 3½ per cent. on the stock, or 1 per cent. less than the actual amount divided among the shareholders, while in 1895 the record for the same nine months shows about 4½ per cent. earned and paid, the deficit being the small amount of $14,000.

These figures are very suggestive. They afford a striking illustration of the way the unexpected popularity of the new surface methods of traction in New York have cut into the earnings of the old elevated system. It may, indeed, with truth, be argued that the returns do not imply that Manhattan will cease to pay dividends, and that, reduced to a 4 per cent. basis, the stock is pretty certain to yield a steady return of this kind. It is also stated that vigorous efforts have been made and are still being applied to reduce working expenses, and from time to time rumors make their appearance to the effect that steps are being taken to introduce further economies by the introduction of electrical instead of steam power. The fact, however, remains plain that holders of Manhattan have had ample justification for selling at the high prices that the stock of the company commanded only a short time ago. It is immaterial whether this selling came from the large interests identified with the active management of the property or from smaller holders, who within the last few years had come to regard the stock in the light of an investment. The marketing of the latter class of holdings and the indisposition of the powerful insiders to hold up to the price would amply account for the severity of the drop. Nor must it be forgotten in considering Manhattan's position that the relations of the company to the rapid transit problem in New York city are still unsettled. The plans for a number of branches and extensions submitted by the management to the Rapid Transit Commission have been rejected by the latter body. It is, indeed, not altogether certain that the investing and speculative public would regard the construction of a large number of branches and extensions and the contracting of additional bonded debt for that purpose as being in the nature of a blessing to the company.

SAVINGS BANK DEPOSITORS AND FREE COINAGE.

Statistics of the savings banks of the state of New York, prepared by Superintendent Kilburn, for the year ending June 30 last, show the following results: Total resources, $806,751,426; due depositors on July 1, 1896, $715,032,899; other liabilities, $41,157; surplus July 1, 1896, $91,307,370; number of depositors July 1, 1896, 1,732,382; number of accounts opened during the year, 346,147; number of accounts closed during the year, 268,189; amount of deposits received, $215,490,558; amount of deposits withdrawn, $194,652,393; amount of interest credited depositors, $24,958,727; current expenses of the banks, $2,397,696. As compared with the preceding year, the total resources of the savings banks of the state increased $44,240,196; the amount due depositors increased $45,766,883; the surplus decreased $1,435,352; the number of depositors increased 77,955; the amount of deposits made during the year increased $16,880,859; the amount of deposits withdrawn during the year increased $11,055,195; the amount of interest credited depositors during the year increased $1,564,458, and the current expenses for the banks increased by $54,093. These figures indicate, according to the superintendent, that more than one in four of the population of the state, or, to be more exact, 26½ per cent., are depositors in the savings banks, and that their money is received, invested and cared for at the low cost of 3⅓ mills per dollar per year.

Certain criticisms directed against the savings bank system have prompted the superintendent to make the following statement regarding the provisions of law aiming to render the savings banks secure:

> The law expressly requires that the state superintendent of banks satisfy himself that a proposed bank would be "a public benefit" before it can be authorized, and also to ascertain that its proposed trustees are men of responsibility, character and general fitness for the discharge of their duties. This it is the unvarying practice of the superintendent to do with great care and thoroughness, and also to require such trustees to execute an agreement that they themselves will defray the expenses of a bank until such time as it returns 3½ per cent., net, to its depositors.
>
> No trustee or officer of a savings bank may have any interest, direct or indirect, in the gains or profits thereof, nor receive any pay for his services except for regular and faithful attendance at the institution; nor, directly or indirectly, for himself, or as agent or partner of others, borrow any of its funds or deposits, or in any manner use the same except to make such current and necessary payments as are authorized by the board of trustees. Moreover, a trustee must not second an indorser or surety or become in any manner an obligor for moneys loaned by or borrowed of such corporation.
>
> All of the restrictions of the law look to insuring only absolutely safe investments, and to the prevention of losses in any direction. In a word, moderate returns, with the utmost possible security, are the aim of the system, with every gain, even to the minutest fraction, accruing to the benefit of the depositor. The surplus cannot exceed 15 per cent. of the deposits without necessitating the division of the excess among the depositors as an extra dividend, and the accumulation of a surplus at all is permitted only as a matter of safety to meet the exigency of depreciation of securities in times like the present, and also to enable banks to earn and pay larger dividends than would otherwise be practicable. Further yet, if any savings bank were to

go into liquidation, any surplus that it might have would be distributed among the depositors, and not a dollar of it benefit the trustees.

A provident system which numbers among those directly interested in its security nearly a million and three-quarters of depositors in a single state is one of vast importance to the community, especially to the thrifty industrial element of the population, who are the principal supporters and beneficiaries of the system. Here is a large body of creditors whose property, represented by deposits, is threatened by the agitation of the free-coinage advocates. In the event of the success of that movement these creditors would receive but a little more than half of the sums owing to them by the banks, for while a government may be able to clip or debase the coin, it cannot make the purchasing power of a clipped or debased coin equal to that of the standard coin which it replaces. It is in a high degree unlikely and it should be impossible for this important element in the community to be misled, to their own injury, into supporting a platform which aims at the substitution of a 53-cent dollar for one worth 100 cents.

FOREIGN TRADE FIGURES FOR SEVEN MONTHS.

According to the preliminary figures of foreign trade for the month and seven months ending with July, the exports of merchandise for that month amounted to $67,714,735, which represents an increase of over $11,100,000 as compared with the corresponding month of 1895. The imports for the month were valued at $51,927,566, which represents a decrease of nearly $21,100,000 as compared with July of last year. The free-of-duty imports were valued at $22,571,780, a decrease of over $10,200,000 as compared with July, 1895, and the dutiable imports were valued at $29,355,786, which represents a decrease of over $10,800,000. The exports exceeded the imports by $15,787,169, while in July last year the imports exceeded the exports by $16,484,057.

For the seven months ending with July the exports were valued at $512,326,732, which represents an increase of over $68,900,000 as compared with the corresponding period of last year. The imports were valued at $421,583,123, which represents a decrease of over $43,000,000. The non-dutiable imports were valued at $193,516,227, which represents a decrease of over $25,300,000 as compared with the corresponding period of 1895. The dutiable merchandise was valued at $228,066,896, a decrease of over $17,700,000 as compared with the seven months ending with July last year. The exports showed an excess of $90,743,609 over the imports, whereas last year the imports showed an excess of $21,219,092 over the exports.

Exports of gold coin and bullion for the month of July were heavy, amounting to $10,603,716, an increase of over $6,700,000 as compared with July, 1895, while the imports amounted to $1,505,928, an increase of over $900,000 as compared with the same month. The exports for the seven months ending with July amounted to $53,539,267, an increase of over $14,400,000 as compared with the corresponding period of 1895, while the imports were valued at $26,672,625, which was only a little over $100,000 in excess of those for the corresponding period of last year. Silver coin and bullion exports for the month were valued at $5,730,554, an increase of over $900,000 as compared with July of last year, while the imports were valued at $839,155, an increase of over $66,000 as compared with July of last year. The exports for the seven months amounted to $35,657,784, an increase of over $6,900,000 as compared with the corresponding seven months of 1895, while the imports were valued at $6,783,537, an increase of nearly $1,700,000 as compared with the same period. The exports of silver ore for the seven months were valued at only $370,575, as compared with $36,142 in seven months of 1895, while the imports were valued at $10,619,630, as compared with $6,996,746 in the corresponding period of last year.

SPECULATION IN GERMANY.

As a concession to the increasing demands of the agrarian element in Germany, the German government will, in the future, exercise strict control over Stock Exchange transactions (and the issue of stocks and bonds by new companies), with a view to lessening of speculation and "protecting the public from fraudulent or uncertain financial and commercial enterprises."

A comprehensive law to this end has been adopted by the Reichstag by an overwhelming majority, and it will cause a revolution in the present German Stock Exchange methods. It is intended to discourage stock speculating by forbidding exchange time contracts for grain, as well as stocks and bonds. The government "will assume a certain control over all Stock Exchange business, with special reference to the listing on the Stock Exchange of new issues of stocks and bonds or paper of new companies. It will endeavor to maintain less fluctuating and," as the agrarians hope, "higher prices for grain and mill products by forbidding all time delivery contracts being made on 'change for such grain and products."

The rapid growth of stock speculation in Germany and the alleged heavy losses experienced by the public are said to have caused this legislation, but it really emanated from the agrarians, who think, by such legislation, to bring about an increase in the price of grain and produce in Germany. The only good feature of it, so far as can be learned at this writing, is the making it more difficult to float stocks of unsound or badly managed concerns on the market.

Hereafter, at the German Stock and Produce exchanges state commissioners are to be appointed as representatives of the government, to control transactions and exact the fulfillment of the law. They may be present at meetings of exchange committees and draw attention to abuses. They are to report to the government what they discover and propose remedies as they think best.

The listing of stocks and bonds is to be decided by a committee, of which at least one-half shall not be members of the exchange, and such members must be excluded as have any interest whatever in bonds and stocks under consideration. Stocks and bonds are to be listed only after at least one year's existence. The duties of the committee are to call for information as to a new issue of bonds or stocks; to inform the public of the actual condition of the bonds or stocks, and to refuse to "list" them if information furnished is incomplete. The committee may also refuse an issue without giving reasons.

The Bundesrath may now forbid time contracts on exchange for certain goods, stocks or bonds, or allow them only under certain conditions. Exchange time delivery contracts in mining shares and shares of manufacturing establishments are forbidden. Exchange time contracts in shares of other companies shall only be allowed if their capital is at least $4,760,000. Exchange time contracts in grain and mill products are forbidden. Each court of justice, keeping a register of mercantile firms, shall also have an exchange register for goods (grain, jute, coal, sugar, etc.) and one for stocks and bonds. Every person or firm wishing to transact time deliveries on exchange shall there enter his name, domicile and profession, paying a fee of $35.70 for the first year and $5.95 for each subsequent year. This register is to be open for public inspection. Each entry shall be at once published in the official gazette and other papers. If two parties, on transacting a time delivery contract, are not both entered in one of the registers for their respective lines of business (produce or stocks and bonds), a contract between them is not considered to exist, and its settlement cannot be effected by recourse to courts of law. The same is to be the case if the contract is made abroad or is to be delivered abroad. A good feature of the law is a provision for heavy fines for trying improperly to influence prices.

The law goes into effect on January 1, 1897, excepting the portion in which is forbidden the "listing" shares until after one year's existence. This part becomes law on July 1, 1896, in order to prevent a large quantity of new stock being thrown upon the market before the enforcement of the law.

The father of the law, the agrarian party in the Reichstag, whose leaders are at the head of the Bund der Landwirthe, is a union of 80,000 farmers throughout Germany. Their chief aim "is to get higher prices for their produce and be less dependent upon the Berlin exchange. They say that the time deliveries facilitate imports and hence depress prices, allowing the large speculators to exercise complete control of the market. They say that the speculator makes a plaything of the principal food of man, and that much more grain is sold than is grown on the earth."

There are many Bremen merchants who regret this action regarding time contracts, merchants who know the folly of it. They actively antagonize the new law, and the argument they make "is not to be despised." They fear the big grain transactions for time delivery will now be concluded abroad, and that Rotterdam may attract all business of this description hitherto transacted in Germany.

In order to counterbalance this apprehension, the Reichstag has passed a resolution authorizing the imperial government to address the foreign powers, with a view to calling an international convention looking to the abolition of time delivery contracts. Needless to remark, German merchants will in the end be heavy losers by this childish, not to say short-sighted, action. In consequence of the new law, the German speculating public, says our commercial agent abroad, "will turn from the produce market to the money market; this is already shown. They will in future speculate in bank, railway and steamship shares, as industrials will be practically closed to them."

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

CURRENT BUSINESS NEWS.

Industrial.

With machinery stopping in many directions, and the roll of the unemployed increasing, it is gratifying, says the New York *Journal of Commerce*, to come across movements of an opposite character. The Washington Mills in Lawrence, which shut down for three weeks, and then ran on short time for six weeks, have started up on full time with 1,500 employees, and the Pacific Mills print works started up after a very brief stoppage. Coxe Brothers' coal mines at Hazleton, Pa., which have been idle for several months, have resumed work with 12,000 employees.

The Alice Mill of the Woonsocket Rubber Company was to have resumed operations on Monday, but the United States Rubber Company has ordered it to be closed indefinitely. The reason given is the general business depression. The mill employs 1,400 hands.

The Great Falls Manufacturing Company shut down on Monday mills Nos. 2 and 3 at Southworth for one week, throwing 1,000 hands out of employment.

The Nicholson File Company, at Central Falls, R. I., which employs more than 300 hands, will shut down for four weeks, owing to the condition of the market.

The New York News Bureau says: "The report of the Bureau of Anthracite Coal Statistics for July shows that the stock at tidewater shipping points on July 31 was about 670,000 tons, an increase for the month of only some 43,000 tons. The production from January 1 to August 1 shows a decrease of 1,946,727 tons as compared with the same period of last year. This includes coal shipped from the washeries and supply coal used on engines, two items not included in last year's report."

The Philadelphia *Ledger* says: "American enterprise and American ingenuity have scored two remarkable triumphs in the record breaking trips of the St. Louis and St. Paul. On Friday, August 7, the St. Louis ended a run from Southampton in the unprecedented time of six days, two hours and twenty-four minutes, and on Saturday, August 15, the St. Paul cut down the record to six days and thirty-one minutes. These achievements place the vessels making them in the same class with the Campania and Lucania, the finest steamers of the Cunard Line, which were built especially for speed in crossing the Atlantic."

The striking New York tailors have appealed to the Central Labor Union to aid them financially in their present struggle.

The telegraph operators on the Union Pacific have filed a suit in the federal court at Omaha charging that the receivers have reduced wages in violation of Judge Caldwell's order of 1894; that the officials of the company are hostile to organized labor, and particularly to the Order of Railway Telegraphers, and that a systematic effort has been made to weed out leaders of the order by summary dismissal without excuse.

The Polish workmen at Peters' East Lake Mill, at Manistee, Mich., have gone on strike against a reduction of 10 per cent. in wages. Five hundred men are thrown out of employment. The cut in wages reduced the common laborers' pay to ninety cents a day.

The window shade trust is said to have collapsed. "As a consequence prices for the universally used window shade have fallen 20 per cent. The trust was formed about one year ago."

The striking tailors in New York are reported to have sixty-eight coöperative shops in operation. "Twelve hundred hands are employed. It is stated that 242 contractors have signed the Brotherhood agreement."

The Indiana Bicycle Works, at Indianapolis, employing 1,500 men when running full handed, shut down on Saturday until after the election. The president of the company said: "It is ordinary business sense and not politics that causes us to suspend work until we know what the result of the election will be. We cannot risk further manufacturing until our monetary contest is settled."

The Chattanooga *Tradesman* says: "In some sections labor difficulties are arising for want of work. This will be only temporary, however, as it is thought the idle manufacturing plants and those running on short time will be run at full capacity as soon as the fall trade opens."

In structural material, plates, bars, etc., there is little movement. On the whole, tonnage placed fails to keep the mills running "even fairly busy."

In the rail trade there is a further export sale to Japan by a mill in the central west—9,000 tons. This takes the total export sales this year up to about 45,000 tons.

The *Iron Age* says: "The very low prices which have resulted from the fierce competition in the cast iron pipe trade have again led to an effort to arrange for a pool. The chances of success do not seem any brighter than they have been during the last year."

The iron markets in the central west continue very quiet. Bessemer pig has sold in Pittsburgh this week as low as $10.40, or $9.65 valley furnace. There are no sales of billets.

A Pennsylvania oil expert is reported engaged by an English syndicate to drill for oil in Barbadoes, the southeastern island of the West Indian group. "Wells have already been sunk to a depth of 80 feet by the natives with good results, and it is said that the field is very promising. The syndicate have leased an extensive tract of land in the island and have ordered a large quantity of oil well tools from Oil City and Bradford, Pa."

The striking miners at Leadville, Col., have refused to accept the offer of the leading mine managers to go to work at the old scale of wages until silver reached an average quotation of 75c. an ounce.

The American Watch Company has posted a notice at Waltham, Mass., that the factory would close and not reopen until September 1. President Fitch states that "the shutdown is due entirely to the present agitation of the silver question. A similar notice was posted at the Boston Manufacturing Company. The time of the shutdown there was extended to September 28."

Commercial.

Clapp & Co., New York, say: "Millers show more confidence than for many months. The amount of wheat and flour afloat August 3 was less than any similar date in nine years. Australia, Argentine and India will not likely furnish average supplies. A large area has been sown in Argentine. France will likely have a full average crop. A decree has been issued prohibiting their millers from exporting flour."

The Chattanooga *Tradesman* says: "Stocks in consumers' hands are smaller than for many months, making a good basis for better prices when business improves."

The corn export trade has evidently been largely diverted from the port of New York as a result of the Joint Traffic Association. According to the Bureau of Statistics report for July, which shows that of a total increase of 33,500,000 bushels of corn exported since the Joint Traffic Association went into effect on January 1, New York's share was only 3,000,000 bushels, while Baltimore shows an increase of 8,000,000, New Orleans 11,000,000, and Galveston and Newport News combined 8,500,000 bushels. But wheat exports have been maintained at New York.

Mr. Sauerbeck says the average price of commodities is now the lowest ever known. On August 1 he makes the average 50.2, as compared with July, 50.3; June, 60.1; May, 60.3; April, 60.7; August, 1895, 63.5; August, 1894, 63; August, 1889, 72; August, 1880, 88. The depression in price, it will be seen, is not confined to this country. The average has fallen and is falling in England just as it has and is in this country, and the world over the experience is the same. As far as wheat is concerned the production per capita in this country is below what it was in 1873, and with the exception of one year, 1893, it has been constantly less per capita since 1892.

Railroads.

The all-rail east-bound shipments of dead freight from Chicago last week were 51,014 tons, against 49,126 tons the previous week and 48,338 tons the corresponding week of the previous year.

The Manhattan Railway Company reports for quarter ended June 30:

	1896.	1895.	Changes.
Gross earnings	$2,321,813	$2,403,987	Dec. $82,174
Operating expenses	1,385,915	1,399,546	Dec. 13,631
Net earnings	$935,898	$1,004,441	Dec. $68,543
Other income	42,500	89,021	Dec. 46,521
Totals	$978,398	$1,093,462	Dec. $115,064
Fixed charges	616,799	713,663	Dec. 96,864
Balance	$361,599	$379,799	Dec. $18,200
Dividend	450,000	450,000	....
Deficit	$88,401	$70,201	Inc. $18,200
Fiscal year ending June 30:			
Gross earnings	$9,256,931	$9,393,570	Dec. $136,639
Operating expenses	5,530,958	5,413,964	Inc. 116,994
Net earnings	$3,725,973	$3,979,606	Dec. $253,633
Other income	232,520	287,135	Dec. 54,615
Totals	$3,958,493	$4,266,741	Dec. $308,248
Fixed charges	2,840,397	2,748,695	Inc. 91,792
Balance	$1,118,096	$1,518,046	Dec. $399,950
Dividends	1,800,000	1,800,000	....
Deficit	$681,904	$281,954	Inc. $399,950

Cash on hand, $73,600, and a profit and loss surplus of $4,663,342.

The Philadelphia, Reading & New England Railroad reports for year ended June 30:

	1896.	1895.	Changes.
Gross earnings	$746,569	$724,114	Inc. $22,455
Operating expenses	545,895	522,453	Inc. 23,442
Net earnings	$200,674	$201,661	Dec. $987
Fixed charges	140,544	168,144	Dec. 27,600
Surplus	$60,130	$33,517	Inc. $26,618

The following gross and net earnings are reported for June:

	Gross earnings— 1896.	Gross earnings— 1895.	Net earnings— 1896.	Net earnings— 1895.
Alabama Gt. South'n	$112,426	$115,998	$13,599	$29,969

Financial.

The following securities were sold at auction this week at New York:

8 Shares Fulton Button Co., $100 each (hypothecated) ..... $8 for lot

$15,000 Columbia Typewriter Manufacturing Co. 1st mortgage 6 per cent. bonds, due April 1, 1913. Interest April 1 and October 1 ..... $10 for lot

Clapp & Co., New York, say: "We think it scarcely possible money lenders will ever be willing to lend gold, or the best dollars, accepting promises of the poorest or an uncertain kind. The laborer will scarcely be found who will agree to accept the poorest or an uncertain kind of money in place of the best after having been promised the best. Mr. McKinley has well said: 'Better open American mills to American labor than American mints to foreign silver.'"

The Philadelphia *Ledger* says: "Instead of the government discriminating against silver, it has for years been pampering the white metal, making an artificial market for it by coining Bland dollars and by enormous purchases of the bullion, a vast proportion of both now cumbering the Treasury vaults."

The opposition to Mr. Bryan of the veteran New York banker and free-silver advocate, James B. Colgate, is significant. Mr. Colgate has been one of the leading silver men of the country and a student of the subject for fifty years. He opposes Mr. Bryan on the following grounds: "First, because he advocates free coinage of silver by this country alone at an entirely wrong ratio; second, because he attacks the United States Supreme Court; third, because he stands for the idea that the United States government should not use its power to suppress mobs." He says: "The last two propositions I feel less disposed to accept than the first. As to the first, I am unquestionably opposed to the ratio of 16 to 1 because it does not represent the true commercial value. I should make the ratio about 30 to 1. On this ratio our country could safely adopt free coinage independent of other nations; otherwise not. I believe in silver as the basis of currency, and that it would make the soundest currency in the world if it could be minted at or near its commercial value, because it is the only currency in the world that enters into all the small transactions of life and is used by every individual."

Judge Aldredge, of Texas, is quoted as follows: "They say if a merchant advertises that he will pay 25 cents per dozen for eggs, so long as he has the ability to take all that comes eggs will be worth 25 cents in all that country. But suppose the merchant did not take them? Suppose when a farmer drove up to his store the merchant said unto him: 'My friend, you have misunderstood me. I am not buying eggs. I am simply counting them, certifying that they are good, and handing them back to you.' What would eggs then be worth? The same old 10 or 15 cents per dozen. Under unlimited coinage the government would not buy silver nor guarantee the value of the coins. It would stamp it 'without recourse.' Silver would come from every country in the world, and the government would be a fool to undertake to guarantee the value of the coins by trying to preserve the parity between the metals."

The National Lead Company has declared a quarterly dividend of 1¾ per cent. on its preferred stock, payable September 15.

All the banks in Newfoundland refuse to accept American silver coin, owing to the "uncertainty of the financial and political problems in the United States."

Foreign.

A *Beerbohm* cable says: "A French decree just issued and in force at once has practically destroyed the bounty on flour exported, and until the law is changed there will be very little flour exported to England."

The Amazon Navigation Company is now running a flotilla of thirty steamers on that river and its tributaries.

The Buenos Ayres papers call attention to the fact that quite an active trade is springing up between Argentina and South Africa in consequence of the failure of the Australian wheat crops. Wheat, maize and also mules are being exported largely from the River Plate to Cape Colony.

The activity of the Japanese is reflected in the exploitation of works in Formosa. "More has been done in five months than the Chinese did in as many decades," says the British consul. Long lines of 20-inch gauge Decauville railways have been laid, one being 35 miles and another 50 miles.

The recent discovery of chrome ore at and the arrival in Philadelphia recently of a cargo of it from Port au Port, a small settlement in Newfoundland, thirty miles northeast of Cape St. George, "marks a new departure in the shipping industry, and promises the opening up of a large trade between Newfoundland and Philadelphia." This small cargo "is brought here only as a sample, and if found to be up to the standard of that quality of ore brought here from South America, larger vessels will be put into the trade, and arrangements for the working of the newly-discovered mines on a larger scale will at once be made."

In Corea, as in Japan and China, the recent war appears to have stimulated trade. According to the report of the British consul-general there the total foreign trade last year was $12,684,232, an increase of nearly $2,000,000 over that of 1894, and of nearly $5,000,000 on the trade of 1893.

Mexico's foreign commerce for the first half of this year shows an increase of $10,395,000, or 26 per cent., in exports, and of $2,245,000, or 13 per cent., in imports over the same period of last year.

All the railroad companies of Mexico "have of late felt the effects of the unrestrained competition in freight rates very severely. An effort is now being made by the leading roads to establish a new pooling agreement to cover all foreign traffic, both European and American."

The first session of the Eighth Parliament of Canada was held in Ottawa on Wednesday. J. D. Edgar was elected speaker of the House of Commons without opposition.

The London *Westminster Gazette* attributes the fall in silver to the inability of speculators in the United States to carry silver purchased with borrowed money and to the scarcity of buyers. It says: "The quantity of silver lying unused in the banks of China is large, there being much less demand for it, owing to the setback to trade in both China and Japan, due to the smallness of the purchases of silk by America and Europe. What the people are anxious to know is the amount of silver which is still carried by speculators in the United States. But no information is obtainable on this point, though it must be large. The price is now declining, and the figure may induce more active speculation, both in London and India."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Decision Against Single Taxers.

Judge Wales, sitting in the United States Circuit Court at Wilmington, Del., has handed down a decision sustaining the action of the local magistrate in sentencing two single taxers for failing to pay the fine and costs for the violation of a Dover ordinance. The judge said: "When a law is assailed on the ground of unconstitutionality, the objection must be made so clear that the court cannot hesitate, however reluctant to take the responsibility, to declare it void; but if it be at all doubtful and uncertain whether the statute when fairly construed and executed comes within the constitutional inhibition, no court or judge should presume to attempt to undo the work of the legislature. It is sufficient for me to say that I am by no means convinced that section 17 of the Dover charter, in its operation, has deprived the petitioner of his liberty without due process of law."

Note—Surety—Liability.

The Supreme Court of Georgia held, in the recent case of Bunn, Adm'r, vs. Commercial Bank of Cedartown, that an agreement by the holder and owner of a promissory note with the maker of the same to extend the time of its payment for an indefinite period does not discharge a surety on such note from liability; that as such an agreement would not prevent the immediate bringing of an action, the making of it really amounts to no more than "a mere failure by the creditor to use as soon as the law allows, or negligence to prosecute with vigor, his legal remedies," and that it therefore stands upon an entirely different footing from an extension for a definite period. The court said that in the former case a surety may at any time pay the debt and proceed to enforce the same against his principal and cosureties, if any, while in the latter he cannot do this, and consequently his risk is increased and he is discharged.

Chattel Mortgage—Insurance.

The Supreme Court of Minnesota held, in the recent case of Kells, Assignee, vs. Northwestern Live Stock Insurance Company, that where the vendee of a horse, purchased on credit for $1,000, gave his notes to the vendor for that sum, secured them by a chattel mortgage on the horse, and insured the horse in the defendant company against loss by death in the sum of $500, if any, payable to the vendor as his interest might appear, and the contract of purchase contained a provision that if the horse should die within a certain time thereafter, the vendee was to take the insurance, which was $500, and give up the notes, the provision was not a breach of the clause in the policy of insurance, which warranted that the vendee was the sole, absolute and unconditional owner of the horse. The policy provided that in case of sickness the owner should in every case notify the insurer thereof at its home office by telegram. The court held that this did not require the owner so to notify the insurer of a sickness which lasted only ten minutes or less, and did not recur again at least for seven weeks, and that the possession by the payee of a negotiable promissory note indorsed specially by him to a third party was prima facie evidence that such payee was the owner of the note.

Municipalities - Franchises - Corporations.

The Supreme Court of Michigan held, in the recent case of The Detroit Citizens' Street Railway Company vs. The Detroit Railway et al., reported in the Detroit *Legal News*, that municipal corporations have no power to grant exclusive rights to street railway, gas or water companies, except upon authority from the legislature, given explicitly and clearly expressed, and in construing charters and statutes conferring upon a municipality the right to provide for these conveniences, the authority to grant exclusive privileges will not be implied from the use of general language; that the authority of the municipality to grant rights to a street railway company to construct and operate a railroad in the streets is such authority only as is granted to it by the statute; that statutes by which rights and franchises are conferred, or are authorized to be conferred, upon corporations are in all cases strictly construed in favor of the public and against the corporations, and that a grant of an exclusive right in the streets is not made, or authorized to be made, unless such grant or authority is given in express and explicit terms. The court said: "We think the act in question cannot be construed as conferring the power upon the common council to grant such a privilege as that which was attempted to be conferred by the ordinance of 1862. Certainly there is no express grant of the right to confer exclusive privileges, nor do we think that there is any clear implication of any such power arising out of the terms of the act. There is a limitation upon the right of the company to construct a railway, which is that before doing so the company shall procure the consent of the municipal authorities under such regulations and upon such terms as said authorities may from time to time prescribe. Fairly construed, this language relates to the terms and conditions to be prescribed for the contemplated occupancy by the parties to the contract, and the 'terms and conditions' relate to such occupancy of such streets. * * * Assuming good faith on the part of the municipalities and private corporations contracting with them to be the rule, it would be difficult to imagine a case in which the attempted exercise of a right to grant an exclusive privilege could not be fortified by a well grounded claim of necessity. We think an implication of power cannot be built up upon this claim."

Congress and Railroad Rates.

Judge Wilcox of the United States Circuit Court has handed down an important decision regarding the right of Congress to regulate the rates chargeable by the railroads of the country in the conduct of interstate commerce business. A question arose between the government of the United States and land-grant railroads as to the rate of compensation that the roads should receive from the government for transportation of troops, mails and other effects. The roads claimed they had a right to charge the government the same rates as individual shippers or travelers, while Congress has frequently provided that the compensation should not exceed half of the regular rate, the exact figures to be fixed by the Secretary of War. Under these acts of Congress only half rates have been paid by the government, and the roads, desiring to have the matter settled for all time, brought a test case under the court of claims act, the Atlantic & Pacific road being the plaintiff, to recover full fare for the transportation of a trooper, one Phillip Barrett, from Albuquerque, N. M., to Prescott Junction, Ariz., a distance of 428 miles. The regular fare for the trip is $25.70. The government offered $13.23. The railroad refused to accept the sum and brought suit for the full amount. The decision of the court is in favor of the government.

Insurance—Policy—Evidence.

The Supreme Court of Georgia held, in the recent case of The Scottish Union and National Insurance Company, that there was no error in admitting in evidence in the trial of an action against an insurance company a letter addressed by the plaintiff to an adjuster of the company stating that a certain inventory was inclosed therein, this letter being relevant in connection with other facts to show that such inventory was, in fact, inclosed and sent in the letter; that there was no error, on such trial, in admitting in evidence another letter from the plaintiff to the adjuster, its contents having some relevancy upon the question as to whether or not a demand for payment had been made and refused, and also upon the question of the company's good faith in the premises; that a correct inventory of the goods in a storehouse which had been burned, made shortly before the fire, though not made by the insured, and though the goods did not belong to him at the time the inventory was made, it having been made by the person then owning the goods for the purpose of effecting a sale to the insured, was, on such trial, admissible in evidence as having some relevancy concerning the extent of the loss, and could be considered by the jury in fixing the amount of the same if upon the whole case they should find the company liable; that a clause in a fire insurance policy binding the assured to keep certain books and to preserve them at night in an iron safe, or keep the same in some place not exposed to a fire which would destroy the building in which the business of the insured was being conducted, and stipulating that in the event of failure to produce such books for the inspection of the company, the policy should be null and void, was a warranty on the part of the insured, and not a mere representation; and that there being in the policy sued on a clause of the nature above indicated, and which is usually designated as the "iron safe clause," and it being a matter of dispute as to whether this clause was rightly in the policy or had been inserted therein by the fraud of the company's agent, it was error for the court in charging upon the effect which should be given to this clause, in case the jury should find that it constituted a part of the policy, to leave them to pass upon its materiality, or to treat it as a merely incidental matter to be considered by them in connection with the subject of furnishing proofs of loss.

BUSINESS NOTES.

Reduced Iron Output.

The *American Manufacturer* says: "This big drop in pig-iron production is a striking illustration of the present dullness of trade. In addition to a great depression there is a labor difficulty in the Shenango valley, which is closing down a number of furnaces. The condition of the market is such that a reduction of wages was necessary. Common labor was reduced from $1.30 to $1.15 per day; keepers, $1.90 to $1.60; fillers and helpers, $1.65 to $1.35; hot-blast man, $1.65 to $1.35, and other labor in proportion. But even when no reduction has been made there are few furnaces in operation, and the indications are that the present month will be worse than the last."

Japanese Silk Mill.

A London exchange says: "Particulars of a project for the establishment of another silk mill in Japan have reached us. It is to begin with a plant of 3,000 spindles, probably to be increased to 5,000. The director of the new enterprise has placed himself in communication with the Tokio office of this journal, which has supplied us with copies of the specifications for the whole of the machinery and apparatus required. We are requested to bring this to the notice of textile engineering firms and others in this country who may be interested in the project, and any firms who may desire to see the specifications can do so by applying to us."

Brewing in Japan.

The brewing of beer in Japan has already attained such a stage of development "that the importation of foreign beer has become very insignificant. In the year 1880 there did not exist a single brewery in Japan, and now Japanese beer is being exported to China and America. Germany used to send large quantities of beer in bottles to Japan, which in 1890 amounted still to 10,900 quintals, of the value of 350,000 marks; but in 1895 the quantity was only 4,000 quintals, worth 120,000 marks. It is proof of the progress of Japanese beer brewing that there has been a great increase in the exportation of brewing material to Japan from Germany within the last six years, totaling for that period 1,000,000 marks."

Austria-Hungary's Trade.

For the first six months of this year the returns of the trade of Austria-Hungary show that the exports of manufactured goods increased by 22,500,000 florins, or about 11 per cent. "The increase," says the Vienna correspondent of the London *Economist*, "would be considerably greater if the exports of arms and ammunition, which were extravagantly high last year, were deducted from last year's total exports." In the first half of 1896 the exports amounted to 363,300,000 florins, against 347,900,000 florins in the first half of 1895, while the imports were 379,400,000 florins, an increase of only 5,000,000 florins. It is worth adding that "there is no longer a premium on gold in Austria, and that the stock of gold of the Austro-Hungarian Bank is steadily increasing."

Window Glass Pool.

A Pittsburgh dispatch to the Philadelphia *Press* says: "At a meeting of the window glass manufacturers of the country held at the Monongahela House to-day, preliminary steps were taken to consolidate the two combinations maintained during the past year by the Pittsburgh and Indiana district manufacturers and to organize one big pool, embracing every window glass plant in America which has been operated in recent years. The purpose of the colossal combine is the same for which the steel billet, nail pool and other great industrial organizations have been formed. It will represent about $15,000,000 capital and control all or nearly all of the producing capacity of the United States, manufacturing products with an aggregate value of $15,000,000 annually."

Increase in German Trade.

The trade returns for the month of June show that the increase in the volume of German commerce is going steadily on. "The total imports during June, 1896, amounted to 3,282,845 tons, as against 2,889,790 tons in June, 1895, an increase of 393,055 tons. Exports for the same month amounted to 2,076,128 tons, as compared with 1,782,444 tons in June, 1895, an increase of 293,684 tons. The total of the imports for the half year ended June 30, 1896, is given as 16,175,232 tons, as against 14,096,330 tons for the same period last year, an increase of 2,078,902 tons in six months. Similarly the total exports have grown from 10,930,648 tons during the period January to June, 1895, to 11,957,563 during January to June, 1896, an increase of 1,026,985 tons. The value of the total imports for the same period has risen (in units of 1,000 marks) to 2,241,418 in 1896, as against 2,071,293 in 1895, and that of the exports to 1,738,944, as against 1,579,147."

British Foreign Trade in July.

If not quite so satisfactory as those of previous months, there is little fault found with British foreign trade returns for July. Imports declined £714,664, or 2 per cent., as compared with July, 1895, but the exports increased £775,299, or 3.7 per cent. "For the seven months of this year the imports are £12,049,421 larger on balance, and the exports £13,660,505, so we may fairly congratulate ourselves on the improvement in trade which has taken place. The largest decline in the imports comes under the head of foodstuffs, and the first thing which strikes one is the decrease of 2,485,160 cwt. in our purchases of wheat."

Russian Agricultural Outlook.

The London *Statist* says: "From an interesting article by a Russian writer in a French journal we learn that the agricultural industry in Russia is passing through a very severe crisis, owing, in the first place, to the antiquated methods of farming still generally in use in Russia, and, secondly, to the very low prices obtainable for grain during the past few years. Strange to say, it is the large class of farmers which has suffered most, the small peasant farmers being said to have done very well, while their larger neighbors have been practically ruined. There has, in consequence, been a good deal of cutting of big farms into small ones, a process which the writer in question believes will continue, and that consequently wheat-growing, which has been so unprofitable of late years, will, to a great extent, be neglected in favor of the cultivation of linseed, beet and fruit. In course of time, in fact, it is regarded as possible that Russia, which at present exports from 16,000,000 to 18,000,000 quarters of wheat per annum, will simply grow sufficient for her home consumption."

Trade in Morocco.

Mr. J. McIver Macleod, British vice-consul at Fez, addressed a large meeting of Liverpool merchants recently, under the auspices of the African Trade Section of the Liverpool Chamber of Commerce, his subject being the condition and prospects of trade in Northern Morocco. "The most careful and typical analysis of imports, he said, was that of Tangier, which showed that 57½ per cent. came from Great Britain, 31¾ per cent. from France, 7 per cent. from Germany, 2 per cent. from Spain, and 1¾ per cent. from other countries. Moorish trade policy was ostensibly the same as British, the aim being to place the necessaries of life into the people's hands at the lowest possible prices; but, while the British could not grow enough food for the nation and admitted cereals duty free, Morocco, which could produce far more than it required, sought to attain a like end by prohibitive export duties on wheat, barley, etc. So strict was the prohibition of the export of live animals that he had known an English gentleman to have considerable difficulty in taking away a fox terrier he had brought into the country. No roads, canals, navigable rivers or railways at present existed, and were not thought of. Foot couriers constituted the fastest medium of communication. The climate was healthy and agreeable."

Hawaiian Business Interests.

A letter to BRADSTREET'S from Honolulu says: "Business is moving along quietly in fair volume. The sugar shipping season is about over, so far as the bulk of the crop is concerned, but there will continue to be cargoes shipped throughout the year, as some of the plantations grind all the year round. Crops: The season of 1895–96 just closing produced 200,000 tons of sugar, 50,000 of which is shipped to New York by sailing vessels under contract to the Sugar Trust. The coming season promises well, if rain is not too long in coming. Just now the cane is beginning to suffer for rain in some sections. Rice will probably aggregate 40,000 bags for the year 1896, there being two crops a year here. Coffee is coming in well, and the quality is improving with each crop. There will probably be between 6,000 and 7,000 bags produced this year. Pineapples are becoming quite an item of export, the shipments for this year probably aggregating 7,000 crates (averaging 24 pines) of fresh and 4,000 to 5,000 cases of canned fruit. Of bananas there will be about 90,000 bunches shipped. These constitute the principal items of export from these islands. The coffee and pineapple industries are both in their infancy here and are growing rapidly. Improved machinery and processes are increasing the yield of sugar per acre, and this industry is in a very flourishing condition."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

General trade throughout the United States is practically confined to staple lines. The volume of business is no larger. Where orders have increased in number they are smaller in size. In almost all instances they are based on nearby requirements. The feature of the week is the increased difficulty in making collections and the higher rates for mercantile discounts. Credits are being scanned more closely than heretofore and are granted less freely. Chicago bankers are slow to make loans except to move the crops, and Chicago bank deposits are decreasing; foreign banks there demand gold notes. Portland, Ore., announces that many coast bankers are restricting loans, with the natural effect on trade. At Buffalo, Pittsburgh, Charleston, Cincinnati and Galveston mercantile collections are slower than before. Business in South Carolina is retarded by drouth, and in North Lousiana, Texas, southern Arkansas and Mississippi prolonged drouth has so interfered with business in some sections that it amounts to a calamity. Some northwestern lumber mills have shut down owing to low prices and difficulty in obtaining money, while demand for woolens for spring delivery is not yet sufficient to start up machinery.

The total of business failures in the United States is 264 this week, 6 more than last week, 72 more than in the week one year ago, and 13 more than in the third week of August, 1894, the period of extreme depression after the panic of 1893. The feature of the week's failures is found in the number of embarrassments among concerns of large capitalization, 35 with from $5,000 to $20,000 capital, or 1 more than last week; 12 with from $20,000 to $50,000 capital, the same as one week ago, and 9 with from $50,000 to $100,000 capital, compared with 6 last week. Only 2 failures are reported with from $100,000 to $500,000 capital, against 5 last week.

Gross and net railway earnings for the first half of 1896 show the effect of unsettled trade and financial conditions in only moderate gains over the corresponding period last year. Total gross earnings of 129 railroad companies for six months aggregate $370,668,975, a gain of 4.2 per cent., while net earnings aggregate $107,986,965, a gain of 3.5 per cent. Gross earnings showed an increase of 3.6 per cent. last year, and net earnings a gain of 8 per cent. over the year before. Granger and southern roads show heaviest gains in gross over 1895, 12.5 per cent. and 9.8 per cent. respectively, while the southwestern and southern roads show heaviest increases in net earnings, 17.5 per cent. and 11.8 per cent. Central western, eastern, coalers and Mexican roads report decreases in net from a year ago varying from one-fifth of 1 per cent. to 7.5 per cent., while gains on the trunk lines, Pacific roads and grangers vary from 3 per cent. to 7 per cent.

Bank clearings throughout the United States amount to only $813,000,000 this week, almost exactly the same total reported for the third week of August, 1894, when the volume of trade was very small. Compared with last week, this week's total shows a decrease of 4.2 per cent., and contrasted with the week one year ago the falling off is almost 10 per cent. Clearings three years ago were at practically low ebb, and this week's total compared with that for the third week of August, 1893, shows an increase of 20 per cent., while compared with the week in 1892 it is 19 per cent. smaller. Reactions in prices for staples continue prominent, with wool, pig, lard, sugar, coffee, hides and lumber lower, and flour, Indian corn and steel billets (owing to no sales) unchanged. Cotton is higher on reduced estimates of the probable size of the crop. Wheat and oats and pork and petroleum are also higher.

More favorable trade advices are received from Baltimore, where business is satisfactory, owing to better southern purchases, based on the early cotton crop. Among southern cities, Atlanta is conspicuous for reporting better trade. At Chicago there is a more hopeful feeling among dealers in dry goods, clothing and shoes, in which sales have increased. Southern and southwestern buyers have appeared in St. Louis and are buying with moderate freedom for fall wants. Kansas City jobbers report good sales in all lines, and that rains have assured large corn and fruit crops to Kansas. At St. Paul there is a better demand for hardware, groceries and drugs. Telegrams from Seattle state large shipments of live stock and general merchandise have been made to Alaska, and that receipts of new wheat are smaller than expected. Twelve lumber vessels are waiting to load at Tacoma, and San Francisco wires that shipments of wheat flour to the Orient continue to increase.

The New York stock market is dull and speculation is entirely professional. The only buying comes from the short interest, and the traders show a disposition to attack prices, though the absence of liquidation checks declining tendencies. Prices rallied somewhat on the decline of exchange and announcement of gold imports, but declined and became dull again with the recovery in rates. Exchange, after falling to 4.85 for demand sterling, recovered to 4.85¾, and is now unsteady at 4.85½ @ 4.85¾. The gold imports announced thus far amount to over $2,500,000, and seem to be largely "special transactions."

Wheat exports continue well maintained, total shipments from both coasts of the United States and from Montreal this week (flour included as wheat) amounting to 2,991,693 bushels, against 2,635,000 bushels last week, and as compared with 2,389,000 bushels in the week a year ago, and with 3,182,000 bushels two years ago.

At Toronto sales are slow in almost all lines and the volume of business small. No gain is reported in business at Montreal, where collections continue backward. Halifax, however, reports a fair volume of trade. Quebec city shoe manufacturers find stocks accumulating. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $18,502,000 this week, almost the same amount as last week, and only a trifle less than the total in the week one year ago. There are 30 business failures reported from the Canadian Dominion this week, against 35 last week, 37 in the week one year ago, and 30 two years ago.

FINANCIAL.

The Money Market.

So far as time loans and commercial paper are concerned there has been no change in the position of the New York market. The fall in exchange and the announcement that gold imports are beginning tended to create a better feeling, but did not cause any relaxation in the difficulty of negotiating time loans or placing commercial paper. Time money is practically unattainable in a general sense, and the quotation of 6 per cent., plus a commission, is a purely nominal one. A rate of 8 per cent. for choice commercial paper brings us buyers into the market, and makers are generally holding off in view of the situation. The supply of money on call at the Stock Exchange has been large, owing to the fact that available funds are largely concentrated there, and though rates have varied from 2 to 6 per cent., the bulk of the loans have been made at 4@5 per cent. until Friday, when the market hardened under calling of loans and expectations of a bad bank statement to-day, the call loan rate running up to 7 per cent., and the bulk of the transactions being at 5@6 per cent.

The New York Banks.

The statement of averages issued by the New York Clearing House Association last Saturday for the week ending that date affords further explanation of the course of the money market. The features were the decrease of $6,800,000 in cash holdings, a reduction of $3,119,000 in loans, and a corresponding falling off of $9,700,000 in the item of deposits. Shipments of currency to the interior and the transfers of gold to Canada account for these changes, the result of which was a reduction of $4,415,000 in surplus reserve, bringing the total surplus below $10,000,000. As usual, under such circumstances, the bulk of such reserve is concentrated in the hands of a few leading institutions, and a number of banks, according to the detailed statement, were below the 25 per cent. reserve requirement as regards their cash. The figures of the statement compare as follows with those of the preceding week:

	Aug. 8, '96.	Aug. 15, '96.	Changes.
Loans	$468,037,600	$464,918,200	Dec. $3,119,400
Specie	46,545,800	46,863,000	Inc. 317,200
Legal tenders	86,560,900	79,385,600	Dec. 7,175,300
Deposits	477,164,500	467,393,700	Dec. 9,770,800
Circulation	14,963,200	15,789,800	Inc. 826,600
Total reserve	133,106,700	126,248,600	Dec. 6,858,100
Reserve required	119,291,125	116,848,425	Dec. 2,442,700
Surplus reserve	13,815,575	9,400,175	Dec. 4,415,400

At the corresponding period last year the surplus reserve was $41,266,875, and $67,806,650 in 1894.

The Boston Banks.

	Aug. 15, '96.	Aug. 8, '96.	Changes.
Loans	$160,840,000	$162,001,000	Dec $1,161,000
Circulation	10,014,000	10,209,000	Dec. 195,000
Deposits	96,021,000	97,627,000	Dec. 1,606,000
Due from reserve agts	18,419,000	19,884,000	Dec 1,465,000
Legal tenders	7,337,000	7,248,000	Inc. 89,000

Silver.

The silver market's course has attracted considerable attention this week, the feature being a decline, which by Wednesday last had carried the commercial quotations to the lowest level of the year. London advices ascribe the movement to the selling of speculative holdings, and add that they were largely for American account. There is nothing to verify this, and the fact that Chinese purchases in the London market have fallen off, while supplies have been increasing, would seem to have considerable to do with the market. Liquidation undoubtedly occurred in silver bullion certificates here. The price, which was 67c. on last Saturday, dropped to 66c. on Tuesday, under sales of 177,000 ounces, though it recovered to 66¼c. The decline in the price of bars at London was from

30¾ to 30 3/16d., the New York market, as will be seen below, keeping pace with it in point of weakness.

SILVER PRICES.

	Aug. 15.	Aug. 17.	Aug. 18.	Aug. 19.	Aug. 20.	Aug. 21.
London	30¾d.	30 5-16d.	30 3-16d.	30⅜d.	30½d.	30 13-16d.
N. Y.	67⅜c.	67c.	66¼c.	66¼c.	66½c.	67c.

Foreign Exchange.

Lack of inquiry has been even more effectual in depressing exchange this week than the pressure of bills. There was, however, a fair supply of cotton drafts, while the only inquiry seemed to arise in connection with the operations of stock houses that were selling securities for London account. Foreign loan bills have been meet with, but were not a feature. The pressure, due to the inactive demand, was, however, so acute that by Wednesday the market became fairly demoralized. Posted rates, which, as will be seen below, had been reduced on Monday and Tuesday to 4.85½ @4.87 were marked down again to 4.85@4.86½, and actual business in demand sterling, which was 4.87¼ at the end of last week, sold at one time at 4.85, the business of the day being generally at 4.85¼. This decline brought exchange to the lowest figures in some eighteen months. Besides the effect of high rates for money and the difficulty in obtaining discounts, it was conjectured that the same cause had brought upon the market more or less exchange that had been purchased some time ago in lieu of hoarding gold.

The announcement on Wednesday that Messrs. Lazard Freres had ordered the shipment of $2,000,000 gold from London was not a surprise, though even at 4.85 for demand sterling the market was ¼c. or more above the normal specie import point. It was appreciated that the transaction belonged to the class of "special orders," though the "street" jumped at the conclusion that the bankers' syndicate or the combination of banks were behind the matter. Reports even found circulation to the effect that a plan had been formulated to procure $10,000,000 to $20,000,000 gold abroad for the purpose of replenishing the Treasury reserve. This was denied by authority, and it may be mentioned here that the bankers' combination does not seem to have actively interfered with the exchange market throughout the week. Further shipments from London and the continent have been arranged, bringing the total gold in transit hither up to $2,500,000 or more.

On Thursday a firmer tone was shown. It was, however, announced that some further amounts of gold were in transit from the continent of Europe to New York, the movement being rendered possible by special causes connected with the high rates for money. Exchange was, however, firmer, the rate for demand sterling advancing to 4.85½ @ 4.85¾. On Friday the market was dull and a little lower at 4.85½ @4.85¾.

4.86½	4.85¾	4.85	4.84¼	4.84¾	4.84½

Closing quotations on Friday for other classes of bills were: Cables, 4.85¾; commercial bills, 4.84; francs, 5.19⅜ @5.17½; reichsmarks, 94⅞ @95⅜.

The Bank of England discount rate remains at 2 per cent. The bank gained this week £336,000 specie, and its reserve is 58.93 per cent., against 58.76 per cent. last week. In the London open market call money is ½ per cent. and discount ⅞ per cent. On Thursday the London selling price for American gold coin advanced ⅜d. on the prospect of a further drain to this country.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending August 14, 1896:

	1896.	1895.
Dry goods	$2,492,699	$3,076,793
General merchandise	7,004,150	8,207,917
Totals for the week	$9,496,849	$11,287,710
Previously reported	291,223,428	319,740,835
Since January 1	$300,720,277	$331,028,545

The exports (exclusive of specie) from New York to foreign ports for the week ending August 18 were $1,512,092 above those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$7,510,488	$5,223,765
Previously reported	234,577,538	210,739,869
Since January 1	$242,088,026	$215,963,634

Imports and exports of the United States for the month and seven months ending July, 1895 and 1896 (preliminary figures for 1896, corrected to August 15, 1896):

THE STOCK MARKETS.

The New York Stock Market.

Speculation this week has not been of a very important kind. Liquidation is at an end for the present, and the silver scare no longer affects the nerves of the "street." But the public is out of the market, apparently to stay, till the political situation clears up, and London, in spite of favorable developments here in connection with foreign exchange and the beginning of a gold import movement, is more inclined to sell our stocks than to buy them. The market is, accordingly, left in the hands of the professional operators. So narrow, indeed, has it been that the leading representatives of this class have encountered no difficulty in manipulating it according to their views, and the fluctuations have little other significance. Prices continued strong in the early portion of the week, and some of the recent bear leaders were ostensibly active on the bull side. There was a general feeling, however, that the recovery of prices had gone far enough for the present, and by Wednesday reactionary symptoms and indications that fresh short contracts were being put out made an impression on the market. This was interrupted by the unexpected news that $2,000,000 gold had been shipped from Europe, and by the accompanying rumors that arrangements were in progress to secure the importation of further large amounts under the auspices of the banking combination, which is taking care of foreign exchange. On these reports there was a wild scramble of shorts to cover on Wednesday afternoon, but the next day found exchange rates higher and brought denials of the exaggerated gold importation stories. London, too, was not impressed favorably by the situation, and after a little hesitation prices succumbed again to renewed bear pressure, led, apparently, by the prominent professionals. The condition of the money market has been, of course, adverse to bullish speculation and buying by commission houses. Time loans are not being made, and the dependence of the street is upon call money. The supply of the latter is large, and the rates on the Stock Exchange, though touching 6 per cent., have been in the main between 4@5 per cent. The unsettled feeling and the continued calls for money from the west and south, together with the fact that many banks are below their legal reserve, create a situation in which the possibility of a money squeeze is not left out of account by the professional operators. In addition to this, the tendency of railroad earnings to decrease and the symptoms of rate-cutting on a large scale by the western railroads attracts attention and creates further bearish sentiment. On Friday the market was depressed and nervous on the prospect of a bad bank statement to-day, and a rise in call loan rates.

The buying on which the market advanced during the early part of the week was nearly all furnished by the short interest. Some of the more venturesome traders went over to the long side of the market "for a turn," but such purchasers were quick to sell out even before the first appearance of weakness. No outside buying of any noteworthy character could be seen, though at declines stocks seem to be wanted presumably by the large interests which parted with their holdings about the time of the Chicago convention.

Bonds have been firm and dull. There is no further liquidation in railroad mortgages, but the demand is very limited. The second opening of bids for the New York city loan resulted in another disappointment. Bids for $4,600,000 were received, but nearly $1,000,000 of them were at below par and had to be rejected, while the premiums offered in the balance that a majority of the board of estimates decided against their acceptance. The issue of further bonds while this block remains unsold has also been negatived. It is understood that a syndicate has been formed to take at par all of Brooklyn's 3½ per cent. issue, which recently failed, that are not allotted to the public, on a new appeal for bids.

The course of the general market was upwards at first, as already stated. The movement resulted in carrying Sugar up to 106¾, St. Paul to 65¾, Burlington to 61⅜, and other active stocks to correspondingly high figures. On the succeeding decline Sugar fell to 103¼, and it would seem that the inside interest was not in favor of the rise. The grangers were not only affected by the bearish tendency of the market, but by the accounts of rate-cutting that come from the west, and St. Paul fell to 63⅛, Burlington going to 58. Western Union was also attacked and fell to 73⅝ on bear pressure, accompanied by renewed stories that the Baltimore & Ohio's holdings of the stock may come on the market. Louisville & Nashville was the object of reports indicating that legal troubles have arrisen in connection with some of its branch lines, the stock selling from 41¾ to 38⅛. The marketing of a large block of long stock depressed Reading from 9¾ to 7¼, and Manhattan was a very weak feature on the June report, referred to elsewhere, falling to 74½ and rallying to 77⅜.

Boston Stock Market.

The feature of the market has been the slow sale of bonds, this department being very stagnant. Stocks have met with fair attention, and railroad shares close a trifle firmer. Atchison is quiet and closes ⅜ point lower, with Chicago, Burlington & Quincy quite active and 1¼ points higher at the close. Boston & Montana is 2½ points higher, with a steady business. Sugar has shown a stronger tone, with prices 2⅝ points up. Bay State Gas has been active, but loses ⅜ point. United States Leather is dull.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending— Price Aug. 20, 1896.	Price Aug. 13, 1896.	Sales Aug. 20, 1896.	Sales Aug. 13, 1896.

TRADE FEATURES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, August 21.—General merchandise moves slowly and trade continues of a hand-to-mouth character. Buyers will only operate to meet pressing demands, as there is an utter lack of confidence in the future, owing to the unsettled financial outlook. The money market shows little change for the better, and the demand is quiet, owing to high rates. There is a trifle more disposition to put out money, the prospect of gold importations having good effect on the market. Call money is quoted at 5@6 per cent., with time money at 6 per cent. upward, according to dates. Commercial paper is slow and quoted at 6@9 per cent. The boot and shoe trade is quiet, but the factories are quite busy on old orders, and shipments rule large. Leather is quiet but fairly steady. Hides are dull and easier.

Philadelphia, August 21.—Wool still continues flat, and little or nothing is doing among textile workers. Dry goods are in light demand. Glass, paints and drugs move slowly and collections are slow.

Pittsburgh, August 21.—Local trade shows no improvement and business still seems very slow, with but small prospects of any decided improvement. Collections are still reported very slow. There is no noticeable change in iron and steel, and at present there seems no prospect of a hurried improvement.

Buffalo, August 21.—There is no apparent change in trade conditions. Credits are being scrutinized more closely than ever, and business is slow, with collections slower. Money is close, with deposits falling off.

Baltimore, August 21.—Business has been satisfactory, orders coming freely from the far south, owing, it is thought, to the cotton crop coming in and bringing fair prices. Collections seasonable.

West and Northwest.

Cleveland, August 21.—No new conditions have obtained in general business during the week. Trade continues dull.

Cincinnati, August 21.—General business continues depressed. Collections are difficult. Loans are scrutinized more closely.

Detroit, August 21.—The trade situation is unchanged. Business in all lines is quiet and collections continue slow.

Chicago, August 21.—There is a more hopeful feeling among merchants, especially those in dry goods, clothing and shoes. Sales during the week have increased slightly, and a number of country buyers have been in and made fair purchases. Mail orders are also fairly numerous. With other lines, except light hardware, trade is light. Orders for steel rails have fallen off, and there is no call for steel rods or billets, owing to the wire nail mills being closed. A few new stocks of light hardware have been bought by Wisconsin parties. Leather is weak, as hides have declined. Lumber is dull, and a number of Michigan and Wisconsin mills have closed owing to the low prices and the difficulty in securing money to hold their stocks if they continue to run. Prices are easy, and yellow pine is selling at the lowest figures on record. Butter and eggs have advanced. Potatoes advanced 8c. and then declined 8c. to 10c. Fruits are abundant and lower. Wool receipts, 515,105 pounds.

Louisville, August 21.—The usual trade for actual needs is being done, and manufacturers of jeans and cotton clothing are reasonably busy, but a quiet and conservative tone is still a very marked feature of general business.

St. Louis, August 21.—Cooler weather has stimulated sales of leading staples, and buyers from the south and southwest are here in fair numbers placing orders for fall use. They are, however, careful in their selections, and, as a rule, prefer medium-priced goods. Coal for industrial purposes is moving more freely than for several months, which is an indication of greater activity among manufacturers. The slight betterment is attributed to the approaching fall season rather than a general improvement. There is a fair amount of trading in oak harness and hemlock harness leather, principally on account of concessions granted. Manufacturers of boots and shoes continue to buy in a hand-to-mouth manner, as they believe that hides will go lower. Collections are moderately better.

Kansas City, August 21.—Jobbers in all lines report good sales. Collections are slow, retail trade very dull and sluggish, and live stock receipts liberal, with low values. Good general rains assure large corn and fruit crops in Kansas and Missouri.

Des Moines, August 21.—Business in all lines is very dull. Collections are slow.

Milwaukee, August 21.—There seems to be no improvement in trade conditions in this section. Dealers generally report business quiet and collections slow.

St. Paul, August 21.—Hardware, grocery and drug dealers report good trade, while with dry goods houses trade is fairly good. In other lines, excepting hats and caps, which are passing through the dull season, there are the usual number of orders, but for smaller amounts. While little is expected in the way of collections, they are somewhat disappointing.

Minneapolis, August 21.—There are no new features in the trade situation this week. In many lines purchases are made only for immediate use. In dry goods and some other lines there is more activity.

Duluth, August 21.—Quietness characterizes all lines of trade and collections are unsatisfactory. Iron and lumber are very dull, and some of the mines and mills are closing down for the season. The iron ore shipments so far this season are a little in excess of the corresponding period of last year, but the remainder of the season will show a loss. Flour mills are doing a fair business, some of the output going for export.

Omaha, August 21.—With the exception of groceries trade is very dull, and prospects are not good for an improvement until after the election. It is difficult to collect money at the present time.

Sioux Falls, August 21.—No improvement is noted in trade, and retailers are generally purchasing sparingly for fall business.

Southern Cities.

Charleston, August 21.—Drouth has retarded trade somewhat and collections are still a little slow.

Savannah, August 21.—Poor local trade is reported for the week. Country trade is better. Collections in both are slow. Naval stores receipts are heavier. The demand is good, shipments about the same, and prices on the decline.

Atlanta, August 21.—Trade has been very good for the past week. Collections are slow.

Augusta, August 21.—General trade is featureless, dullness continuing. Collections are slow.

Jacksonville, August 21.—No change is noted from last week.

Birmingham, August 21.—Very little, if any, improvement has been noticed yet in trade. Some merchants are in eastern markets buying for the fall.

Nashville, August 21.—Business continues quiet, with conservative disposition on the part of both buyers and sellers. Money is reported scarcer locally, though large houses are offered liberal amounts from eastern centers. Collections keep up very well.

Memphis, August 21.—General trade shows but little change. Collections are slow.

New Orleans, August 21.—Orders from the sugar district show a good improvement, but the drouth continues in Texas, north Louisiana, south Arkansas and Mississippi, almost forbidding new business, and in many sections amounting to a calamity. Cotton receipts promise to largely exceed receipts in any previous August, and are quickly taken up at the advance. The rice crop is also unfavorably affected, yields disappointing, but receipts meeting good sale. Sugar is dull. There is a liberal movement of bulk grain from the west for export.

Galveston, August 21.—Jobbers in all lines report business only fairly satisfactory. Continued drouth is seriously affecting the cotton crop, and complaints are heard from all portions of the state. Merchants are very conservative in extending credit.

Pacific Coast.

San Francisco, August 21.—Only a moderate volume of trading is reported. Produce markets are dull, with prices weak. Flour shipments to the Orient are increasing. Fruits are cheap and plentiful. Wheat freights are firm.

Portland, August 21.—Retail trade for the last week or two, owing to the absence of many persons from the city, has been inactive. At present the unsettled state of the money market is working a hardship, as bankers in the northwest seem to be calling in loans, and very little is being loaned on the best collateral security. The wool market is unchanged, and it is hard for growers to sell.

Seattle, August 21.—Business continues on conservative lines. The usual August extensions are not being shown. Large shipments of live stock and general merchandise to Alaska have been made this week. New wheat is not arriving as freely as anticipated, and is much shriveled, but a good berry. Advances to farmers are not being made so freely as last year. Millers and others expect an early let-go.

Tacoma, August 21.—Local business remains very quiet, but new wheat has begun moving and promises some betterment. Twelve lumber vessels are now in harbor. Tea imports are reaching large proportions.

Canada.

Montreal, August 21.—Trade reports from the different centers indicate no improvement in general business, and collections are still backward. Quebec shoe manufacturers are somewhat slack, owing to overproduction and falling off in orders. The fish catch in Bonaventure and Gaspe districts is reported a good one.

Toronto, August 21.—Wholesale trade is without feature. The movement generally is slow, with prospects somewhat uncertain. Wheat is steady, with increased business.

Halifax, August 21.—The trade situation here is without special feature. Wholesale houses report a fair amount of business, and collections are as good as anticipated.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM AUGUST 8, 1896, TO AUGUST 14, 1896, INCLUSIVE.

Dry Goods.

Business is slow, with operations within conservative limits. Dealers are buying only supplies to meet pressing needs, and this keeps the market slow all along the line. Cotton fabrics are slow of sale and prices low, notwithstanding the higher cost of raw cotton. During the past few months the cost of production has cut a small figure in the selling price, as manufacturers have been anxious to find an outlet for the goods. Printed fabrics for fall are going slowly into use, while trade in ginghams has ruled slow. Dress woolens are dull, as agents are doing little new business, and machinery is very moderately employed. Jobbers are meeting with a very slow business. In mens'-wear woolens trade is very disappointing. The spring sale of light weights has been backward, and orders are not enough to start machinery in the case of many mills. The outlook is poor.

Wool.

The market continues dull, with the general demand very small. Occasional fair-sized lots have sold at concessions on bids, which helps out the business of the week, but trade, as a whole, is as slow as at any time. Supplies held at the seaboard are large, and until buyers are in want it is useless to attempt to do business. Several good lines of territory and Texas wool have been taken at concessions, while a large manufacturer picked up some No. 1 Ohio fleece at 18c. for clothing and combing thrown together, while the same price was refused for other lots. Dealers feel that the market is low enough, and where they are not forced to have money they will cut no lower. Reported that the Arlington mills have shipped 2,200 bales Australian wool back to England, and that 500 bales French scoured has been sold on the market to go to the continent, while negotiations are in progress on 2,000 bales Australian wool, to go to England.

THE SUPPLY OF GOLD.

The Washington correspondent of the Philadelphia *Ledger* writes: "'The supply of gold is inadequate to make it a safe standard, and the scarcity of it will tend to the depression of prices.' This is one of the prominent stock arguments advanced by free coinage orators in support of their contention. The production of gold is larger than is generally supposed, and the application of the advances made in science and the improvements made in machinery have added materially to the output during the past five or six years. From 1800 to 1850 the annual gold production of the world averaged less than $16,000,000. The annual average for the twenty years next following, 1850 to 1870, covering the boom in California and Australia, was very close to $125,000,000, and from 1870 to 1886, a period of fifteen years, the annual average was nearly $110,000,000. For the ten years ending with 1885 the annual average was $138,285,240, the production for 1895 exceeding $200,000,000. The value of the output of American gold mines last year was $46,610,000, which is greater than for any year, with a single exception, since 1870. These figures show that the annual production of gold is steadily increasing, and with

improved methods of development it is reasonable to assume that this increase will continue.

"But aside from the increase in the production of gold, the important fact must not be overlooked that as the world advances in enlightenment, bringing labor-saving machinery and improvements in business methods, the less necessity there is for the employment of actual money of any kind. This is plainly set forth by Judge Aldredge, of Texas, in his Dallas speech, in discussing the free coinage argument in reference to the alleged inadequacy of the gold supply. 'Steam and electricity,' said Judge Aldredge, 'have so knitted civilized people together that they are practically one community. Business men speak to each other around the world as if they were assembled in the same building. Their business is done on a system of credits without the use of money except for ultimate settlement. Nor is this method confined to business men. It is broadening with the evolution of man from a lower to a higher plane of intelligence.

"'A farmer may now live for a whole year on the fat of the land and never handle a dollar in money during that time. He may receive checks for his crop, deposit them to his credit with a bank, and draw on the bank for what he owes and spends. Neither he nor the men who bought his crop had a dollar in the bank. They only had credit there. The bank owns the money in its vaults, and its customers simply have the bank's obligation. Bank credits perform precisely the same work that gold and silver do, and they perform it much quicker and more conveniently. The Scots are the most conservative people in the world, and they have had the best banking system of any people for 200 years. On a gold reserve of $23,652,000 they support bank credits to the amount of $448,288,000. The best authorities estimate that only one bill of exchange in five hundred thousand is ever paid in money in England. Gold, silver and other money perform 1 per cent. of the exchanges in this country, and credits, in the shape of bills, notes, checks, etc., do the other 99 per cent. The business of the world could no more be done to-day with gold and silver than its inland transportation could be done with ox wagons.

"'The 16 to 1 orators, in denouncing the act of 1873, assert that half the money of the country was destroyed, and hold out the idea that our money has been contracted to that extent. In 1872 our population was 40,596,000, and our per capita of money was $18.79. In 1894, after the country had been suffering with gold standard for twenty-one years, our population is 68,275,000, and our per capita of money is $35.44, and we have much better money now than when we had then. The adoption of the gold standard as a measure of value did not increase the demand for gold for use to any great extent. Alcohol is the standard for measuring the strength of all spirituous liquors, yet that fact has never been found to be very straining on alcohol.'"

TO SHOW AMERICAN APPLIANCES IN CHINA.

The *American Manufacturer* says: "From the acting secretary of the Smithsonian Institute, Washington, we have received notice of a very commendable plan by which American machinery and mechanical appliances may be brought to the attention of Chinese customers. It seems that a letter from the United States legation at Pekin to the State Department gives the particulars of the project. This letter states that the Pekin University, an important educational institution of that city, conducted under the auspices of the American Methodist Episcopal Mission, has recently opened in one of its buildings a museum which it is proposed to devote largely to the exhibition of foreign machinery and mechanical appliances. This museum is visited by daily increasing numbers of people of the better classes who are interested in acquiring some knowledge of foreign manufactures and inventions, and it is believed that it can be made an important means of advertising and introducing the products of American industry. The authorities of this museum would be glad to receive and exhibit working models, photographs or drawings of machinery and invention, or specimens thereof, such as plows, ships, firearms, cannon, electricity machinery, cars, locomotives, windmills, looms, printing presses, wagons, engines, etc. Each exhibit which may be presented to them will be marked in Chinese with the name and address of the maker, together with description and price thereof if desired, and capable translators will explain their use to inquirers.

"The letter to the State Department says that this is a good opportunity for manufacturers in this country who wish to reach the Chinese market. Pekin, with a population of 600,000, is the literary and political center of the empire. Advertising here should be more profitable than in any city in China. The Pekin University is the center of a wide influence. It occupies commodious foreign buildings lighted by electricity, and is attended by hundreds of young men in search of western learning. The museum referred to is to be conducted solely for the purpose of increasing the usefulness of the university and attracting the attention of inquirers. Exhibits of the character above described will be gratefully received by it, and will be as advantageously employed for the benefit of exhibitors as circumstances will permit.

"Correspondence of the subject and articles for exhibition may be sent to the Pekin University, Pekin, China, or to Mr. Charles H. Taft, treasurer of the Pekin University, No. 78 William street, New York, and under an arrangement with the I. M. Customs will be imported to China duty free."

QUICKSILVER PRODUCTION IN CALIFORNIA.

The *Engineering and Mining Journal* says: "Quicksilver production in California has shown this year a considerable increase, the total receipts at San Francisco for the six months ending with June having been 18,439 flasks, a gain of 4,743 flasks, or 34.6 per cent., over the first half of 1895, and of 6,033 flasks, or 48.7 per cent., over 1894. While these receipts gauge the rate of production very fairly, they do not give the whole amount, as the reports do not include the quicksilver sold directly from the mines, nor that shipped from them to the east by rail, which does not come to San Francisco at all.

"The larger output seems to have been absorbed without difficulty. In addition to the greater demand from the California mines, there has been a growth in exports very nearly corresponding to that in the production. The trade with China, which had been suspended for several years, has been renewed, and has aided materially in disposing of the increased production. There has been, however, a reduction in prices, and the present quotation in New York is $2 per flask below that of $37.50, which ruled at the opening of the year, following—as it always does—a similar fall in the London market. There has been some talk of a possible further reduction, but in the present condition of demand and supply it does not seem probable, especially as this market is one in which lower prices will not induce increased sales except to a very limited extent.

"The figures of the production of the Spanish and Austrian mines for the current year have not been made public, but it is understood that there has been but little change as compared with last year. There is said to have been some increase from the Mexican mines, especially the Huitzuco, but this has no influence on the general market, since the Mexican production is still considerably below the home requirements.

"The increase in California production has not resulted from the opening of any new mines, but from the more active operation of the old mines, all of which have been steadily working since the opening of the year.

"We have been accustomed to congratulate ourselves on the superiority of our methods of mining and metallurgy, and in some respects this has been justified by our success. In quicksilver, however, we find that ores are worked of lower grade abroad than can be successfully worked here. The Idria mines, for instance, have been successful on ores averaging as low as 0.70 per cent. metal, and at the Spanish mines ores of quite as low tenor are treated."

A COMMERCIAL "BATTLE OF DORKING."

The London *Iron and Steel Trades Journal* says: "We have more than once pointed out that the accounts of the decadence of English trade, and of the increase of German and Belgian trade, were slightly exaggerated. We have now, however, to deal with a book which announces solemnly that our glory has departed, that our commercial supremacy is at an end. Mourning, lamentations and woe will best describe the small book written by Mr. E. E. Williams, entitled 'Made in Germany.' This is an alluring title. It belongs to the same class of literature as the 'Battle of Dorking.' Just as that pamphlet was meant to prove that England was unable to resist invasion, so this is meant to prove that our supremacy in foreign and colonial trade has departed. The Decline and Fall of British Industrial, Supremacy' is proclaimed as a fact, not threatening, but already accomplished and without hope of remedy. At the same time we must admit that some of the figures are startling It is a fact that the shipments of iron and steel to India have declined, as shown by the following figures taken from the official statement of the trade of British India for 1894-95. From the United Kingdom in 1883–84 we sent about 186,000 tons and in 1894–95 116,350 tons, while Belgium and Germany had very large increases. But it is not quite certain that these increases are all real. It is quite possible to send iron and steel from Middlesbrough, Leeds or Sheffield to be shipped at Antwerp as Belgian or German goods, and there is a great temptation to do so. It should cost no more, perhaps less, to get to Antwerp from Durham or Northumberland than it does to get to London, and once at Antwerp the freight to India is only 10s. instead of 15s. 9d., a saving of more than 30 per cent. But even supposing that some British iron is shipped at Antwerp as Belgian, the margin is unhappily large, and, as the official statement remarks, 'it merits attention.'

"We notice that Mr. Williams shifts his dates to suit his arguments. Sometimes he begins with 1870, sometimes with 1880, and more frequently with 1890. He stops also at 1894 if it suits him, and at other times carries us on to 1895. Thus he points out that our exports of iron and steel to Western Australia fell 'from 19,861 tons in 1890 to 6,958 tons in 1894.' But he omits to say that in 1895 they rose to 27,127 tons. The suggestion is that our exports to Western Australia are falling off and are being replaced by German and Belgian material. Now the total imports of that colony amounted to £2,114,000, of which £611,000 came from United Kingdom, £147,500 from British possessions, and only £46,000 from all foreign countries. The case of our exports to Canada is the strongest that Mr. Williams has produced. It is true that Germany sent to Canada goods valued at £786,000 in 1893 and £1,200,000 in 1894, an increase of about 50 per cent. But we are puzzled by the statement that Canada took 100 per cent. less of our goods. In fact, we really do not know what is meant by a fall of 100 per cent. The phrase, which is frequently used by Mr. Williams, has really no meaning. There was, indeed, a reduction in Canadian purchases from £9,000,000 in 1893 to £8,000,000 in 1894, but that is not 100 per cent.; it is only 11 per cent. Of course no reference is made to the Cape of Good Hope, to which we sent material to a value of £7,511,000 in 1894 and £9,732,000 in 1895.

"It is interesting to ascertain how far this appropriation of British trade by Germany has gone. The total exports of the United Kingdom were in 1891 £309,113,000 and in 1894 £273,786,000. The total exports of Germany amounted to £158,805,000 in 1891 and £148,130,000 in 1894. The imports of German goods by the United Kingdom were almost stationary at about £27,000,000 from 1891 to 1895, but our exports to Germany rose from £29,944,000 in 1891 to £32,737,000 in 1895. And yet we are told that Germany is ousting us even from our own markets, and that the bulk of the articles we consume are 'made in Germany.' The total exports of Belgium were valued at £60,761,000 in 1891 and at £52,147,000 in 1894. The exports of iron and steel from Belgium to India amounted to 85,750 tons in 1893–94, and only to 80,750 tons in 1894–95. As regards British exports to India, it should be remembered that there have been large exports of rails, etc., from the United Kingdom, on government account, which are not included in the commercial returns. These are estimated by the Indian government at about £1,000,000 per annum for the last five years."

A LONDON TO A MINNEAPOLIS "MILLER."

The London *Miller* says: "Our excellent contemporary, the *Northwestern Miller*, sharply criticises the answer made to Mr. Pillman at Southampton by Mr. J. Emerson. It will be remembered that that gentleman adopted as his standpoint the famous axiom that 'It is better to suffer the ills we have than fly to others that we wot not of.' He argued that the entire abolition of options, such as Mr. Pillman advocated, might very conceivably land us in worse difficulties than we have ever yet experienced. We are willing to believe that options as practiced in the western states of America are not exactly the same thing as the futures of the Atlantic at Liverpool; but the weak point of all the opponents of option dealings is their inability, or, or at any rate, their failure, to distinctly show in what way the mechanism of the system they denounce injures the legitimate trader. A library has been written in denunciation of gambling in produce, as the forward buying and selling of such commodities is termed by some economists; but, for the most part, these fulminations contain nothing but bare denunciation. The most forcible arguments in such a matter are essentially concrete. The ounce of practice is, proverbially, worth more than the ton of theory. If the *Northwestern Miller*, for instance, had devoted the space which it gave to its vigorous paragraphs on that particular incident of the Southampton convention to the plain statement of one actual case of loss sustained by an American miller from the machinations of option dealers, it would have advanced the cause it has at heart by at least one thousand miles. It is not so many years ago since a large and representative meeting of western American farmers passed a resolution against options on the score that they tended to unfairly reduce the price of wheat, and it was just three weeks after that meeting that a convention of the National Association of American Millers, attended by some 500 members, was held in Minneapolis, and passed a resolution condemning options, on the ground that they unfairly raised the price of wheat. Now, it is certain of these two parties, one must have been wrong, and we will leave it to our good friend, *The Northwestern Miller*, to clearly show, at an early date, who was right and who was wrong."

WHY INCREASED TRADE DOES NOT REQUIRE MORE MONEY.

The Philadelphia *Press* prints the following compilation: "Treasury officials have long been engaged on an investigation as to the use of instruments of credit in this country, a question of the utmost importance at any time, but of supreme interest just now when the nation is so much involved in solving problems relating to all sides of the financial and money questions. There is a large mass of material accumulating at Washington on the subject, all going to show that the use of credits in exchange operations have rapidly increased. The clearing house figures for New York city show that in this country the percentage of cash balances to the total clearings was 6.7 per cent. last year, which is higher than at some former periods. The tables since 1854 give the following results:

Year.	*Clearings.*	*Balances paid in money.*	*Per cent. of balances to clearings.*
1854	$5,750,455,087	$297,411,494	5.2
1860	7,231,143,057	386,693,438	5.3
1870	27,804,539,406	1,036,384,822	3.7
1880	37,182,128,621	1,516,538,631	4.1
1890	37,661,686,572	1,753,040,145	4.7
1891	34,053,698,770	1,584,035,500	4.6
1892	36,279,905,236	1,861,500,575	5.1
1893	34,421,380,870	1,696,267,176	4.9
1894	24,230,145,368	1,585,241,634	6.5
1895	28,264,379,126	1,896,574,349	6.7

"The payments into the Bank of France in recent years have been as follows, in millions of francs. The use of notes and checks is growing and the amount of coin payments seem very light:

Year.	*Specie.*	*Notes.*	*Transfers or checks.*	*Total.*
1830	624.4	4,882.1	2,382.2	7,888.7
1840	955.9	4,150.1	3,281.4	8,387.4
1850	2,327.7	6,962.1	3,490.3	12,789.1
1860	6,629.1	15,411.1	11,488.4	33,528.5
1870	6,458.1	23,496.3	19,037.2	48,991.6
1880	5,323.3	32,095.1	32,713.5	90,131.9
1890	3,098.8	36,437.9	43,330.7	82,867.5
1894	2,727.5	34,921.6	46,170.0	83,819.2

"The annual totals of the clearings of London are equivalent to more than $36,000,000,000, and the clearings of the Bank of Germany are annually equivalent to $30,000,000,000. The growth to these tremendous figures has been rapid, as will be seen by the following figures:

Year.	*London clearing house, pounds sterling.*	*Bank of Germany, imperial marks.*
1876	4,963,480,000	36,684,830,000
1880	5,794,238,000	52,193,508,000
1884	5,798,555,000	71,596,793,700
1888	6,916,133,000	84,337,564,300
1890	7,801,048,000	108,594,412,900
1891	6,847,566,000	109,933,249,000
1892	6,481,562,000	104,489,335,000
1893	6,478,013,900	110,942,348,400
1894	6,337,222,000	110,783,951,000
1895	7,592,886,000	121,313,106,800

"The total clearings of the whole United States are greater than even in London or by the German Imperial Bank. In recent years they have ranged from $44,000,000,000 in 1888 to $60,000,000,000 in 1892 and $51,000,000,000 last year. All this business is done by clearing houses, as has been said, by the use of but 6 per cent. of the totals in actual cash. There is a great deal of business in all countries which does not go through the clearing house. In this country it is estimated that the business outside clearing houses is more than double that done by those institutions. This is done largely by check and other paper instrument devices, but it must require, comparatively, a greater volume of money to do this business. In 1892 the Treasury officials found that the business of nearly 3,500 banks in this country was done as follows:

Location of banks.	*No. banks.*	*Total receipts.*	*Per cent.* *Coin.*	*Paper curr'cy.*	*Checks, drafts, etc.*
New York	48	$130,976,693	0.11	7.53	92.36
Other reserve cities	281	116,514,324	0.82	6.44	92.74
Banks elsewhere	3,144	83,713,926	3.80	11.29	84 91
United States	3,473	$331,205,213	1.29	8.10	90.61

WHAT IS "WALL STREET?"

A reader of the Philadelphia *Press*, Mr. Neff, of Neff's Mills, Pa., has heard a great deal of "harping about Wall street," and he asks what Wall street is.

The *Press* replies: "Mr. Neff is not the only man who is troubled by this question. There are a large number of men who work hard and intend to be fair-minded whom incessant talk about big corporations and 'Wall street' has filled with the idea that in this country there are a few men holding all the property and a great many men doing all the work. The few men they think meet in Wall street and plot to make their money more. The many work hard and have little, and when they come for their mail and weekly paper at Neff's Mills they feel like voting for free silver as a change to get rid of 'Wall street.'

"But what is Wall street? Railroads are built, factories are built and run, money is loaned, and all the work of civilized life is done and carried on, not by individual men, but by corporations. Who owns the big corporations, railroads, banks, factories and so on? Tens of thousands of industrious, thrifty, saving people. The Pennsylvania Railroad was organized fifty years ago by a handful of men. You could have put them all in a small room. To-day some 28,000 people own the road, and among these people are insurance companies and savings banks, so that the real number of people who own the shares and bonds of the Pennsylvania is to be numbered by the hundred thousand. The New York Central was owned by 1,200 persons twenty-seven years ago when it was organized. It has now over 9,000 owners, and there are, besides, the bonds, many of which are held by savings banks in trust for 1,600,000 depositors. The bigger the corporation the more its shares tend to divide up. The railroads of the country have about 250,000 shareholders, and there are as many more bondholders. The national banks are owned by 500,000. One-fifth of the real estate mortgage debt of the country is security for savings bank deposits, building association shares and life insurance, and the holders of these deposits, shares and policies number about 15,000,000, more than will vote next November.

"With these millions of owners for billions of dollars of property represented by shares and bonds, there has to be a place where this property can be bought and sold and where exchanges can take place, and that is 'Wall street.' It is the market for this kind of property. There are there the few great holders, but there also are the many whose holdings are still greater than the holdings of the few. As in all markets there is cheating and sharp practice. There are men that make money of the innocent, the credulous and the unwary. Every county fair has its sharpers.

"No one abolishes fairs on this account. Men gamble in wheat. No one proposes to abolish sales of wheat. Men gamble in shares. This is no reason for abolishing this great market for shares. Nor are the shares all. Scores of banks and as many trust companies gather to a focus at Wall street great masses of mobile capital. No new country ever built its own railroads. It cannot. Yearly the gap between cotton and the mill, between wheat and the consumer, between coal and iron and the great public has to be bridged. This is done by gathering in Wall street great masses of capital fed from ten thousand sources, the loans of insurance companies, the purchases of new bonds by savings banks, and all the various ways in which the thrifty savings of the industrious are kept increasing in value because they are united and kept in use.

"When people attack 'Wall street' they are really attacking the great market in which a ready sale for securities, and a constant supply and demand for credit, enables the saving to find securities in which they can put their money. The sums saved have to be put somewhere, and while a very large share are loaned on mortgages, a still larger share goes to Wall street and finds there the securities in which they can be invested. As in all trade, there are losses, there are cheats, there are swindles; but this does not interfere with the fact that all the land gains by this open market for capital.

"Where laws are enforced, where the currency is sound, where contracts are kept and where manufactures are protected, property of all sorts increases, and its owners multiply and increase because wages are high and savings many until great masses each own a little property. * * * But as for 'Wall street' being Republican or Democratic, this is nonsense. New York is a Democratic city, and a very large share—perhaps a majority—of the men on Wall street are Democrats. But this has nothing to do one way or the other with the place as a great market for capital.

"There is not a country or a town which is not able to borrow at a lower rate because in Wall street the men who loan money are competing with each other. There is not a man who borrows or invests who is not able to do it more cheaply and more safely because a great mass of loanable capital is gathered in Wall street. The men who attack 'Wall street' are either ignorant men, or else they are men to whom the payment of a just debt is odious. Such men naturally support the Chicago platform, which proposes to pay in silver debts contracted in gold without regard to existing contracts. But the thrift, the industry and the savings of the land profit because the existence of a great market for capital in all its forms renders the interest on loans cheaper, makes the building of railroads easier, and operates to diffuse property and cause small investments and savings both safe and profitable."

MONEY OF THE WORLD.

The Philadelphia *Press* says: "The money of the world is distributed as follows (000s omitted in the first three columns):

Countries.	*Gold.*	*Silver.*	*Paper.*	*Per capita—Gold.*	*Per capita—Silver.*
United States*	$600,100	$625,600	$383,300	$8.41	$8.77
Un. Kingdom	580,000	115,000	113,400	14.91	2.96
France	850,000	487,000	32,100	22.19	12.94
Germany	625,000	215,000	60,400	12.21	4.20
Belgium	55,000	54,900	65,400	8.73	8.71
Italy	98,200	41,400	191,800	3.20	1.35
Switzerland	14,900	15,000	....	4.97	5.00
Spain	40,000	166,000	83,700	2.28	9.49
Portugal	38,000	24,800	55,100	7.45	4.86
Austria	140,000	120,000	204,300	3.22	2.76
Netherlands	29,200	56,200	28,600	6.21	11.96
Norway	7,500	2,000	3,800	3.75	1.00
Sweden	8,000	4,800	2,100	1.66	1.00

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

INSURANCE.

1850.——1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

OFFICERS:

GEORGE H. BURFORD, *President.*

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, AUGUST 29, 1896.

In his speech at Carnegie Music Hall, ex-President Harrison made a careful review of the issues in the campaign. He necessarily went over ground which has been rendered familiar in the discussions thus far had, but his high position in the Republican party gave his remarks a special interest. In one of the passages in his address he directed attention to the importance of the choice of a President, saying that, as the law is now, without the passage of any free coinage law at all, it is in the power of the President of the United States to bring the business of this country to a silver basis. All he has to do is to let the gold reserve go, to pay out silver when men ask for gold, and we are there already. It is only, General Harrison said, because the Presidents of the United States that we have had, and the one we have now, have regarded it under the law as their public duty to maintain the gold basis, maintaining that parity between our silver and gold coins which the law declares is the policy of the government, and because the present President has had the courage to execute the powers given to him by the Resumption act to carry out that declaration of public law.

So much for the power of the President. As regards the limits of the power of the government as a whole, General Harrison said that it can fix its money unit. It may declare by law what shall be the relative value of an ounce of gold and an ounce of silver, but it cannot make that last declaration good. It is unquestionably fully within the power of the government to bring this country to a silver basis by coining silver dollars and making them legal tender. This government may say, "You shall take one of these dollars in discharge of any debt owing to you for a dollar, notwithstanding you may have loaned gold dollars," but it cannot say and enforce the decree that one ounce of gold is the equivalent of sixteen ounces of silver. Not only that, not France and England and Germany can do that unless the markets respond.

No more tactful speech has been made during the campaign by any of the Republican party leaders than that made by Governor Griggs, at Trenton, on Thursday, as presiding officer of the Republican State Convention. He pointed out that upon the great overshadowing question of the campaign the recent Democratic convention of New Jersey agreed precisely and at all points with the Republican convention, and so solemnly declared. He presumed that they were of the same opinion still, yet the Democratic organization, he did not say the Democratic party, of New Jersey was supporting a candidate hysterically opposed to almost every sentiment heretofore distinctively Democratic. Agreeing in principle upon the financial question, the Republicans, he said, stood firm and united in opposition to inflation, repudiation, and the robbery of labor, while the Democratic machine was trying to enforce its principles by electing a man who doesn't believe in or profess one of them, a man who recently declared quite truly that he was not a Democrat, in whose nomination New Jersey Democrats refused to take part; the associate and favored friend of Tillman, Altgeld, Waite, Pennoyer, Stewart, Peffer, and of every other public man who has earned questionable distinction by insults offered in a public manner to the Democratic President of the United States for manfully performing his duty to see that the laws are faithfully executed. Governor Griggs's speech was pitched upon a plane calculated not to repel the support of Democrats who cannot accept the Chicago platform, and his tact might well be emulated by other men filling positions of prominence in the public eye.

Mr. Bryan may, unless he be controlled, derange the plans of some of the more important of his supporters in the east. There has been some talk of an arrangement being put into force according to which, while the candidate of the Chicago convention would receive the formal support of the regular organizations, sound money congressmen would be nominated so as to impose a check upon him in case he should be elected. This programme will not suit Mr. Bryan. In a speech delivered at Erie, Pa., a day or two ago, he declared that his party would not be satisfied with securing the presidency. The President alone, he says, is powerless to secure legislation. He does not express his approval until the House has joined in a measure, and he appealed to all interested in the success of his cause to secure the Senate and the House as well as the presidency. The Senate, he said, is practically secure, and he has no fear but that the Senate which convenes on March 4 of next year will be in favor of the free and unlimited coinage of gold and silver at the present legal ratio of 16 to 1, without waiting for the aid or consent of any foreign nation. But, he said, it is necessary to have the House also "in order to put any good measure into operation," and he begged in every Congress district his followers should see to it that no man shall receive a majority of votes who is not in sympathy with the free-coinage movement.

Some criticism has been made of Secretary Carlisle because of a statement made in a recent Treasury circular, which, in referring to the act of April 2, 1792, spoke of "the gold dollar or unit" as being one of the bases of the monetary system established by that act. This statement was characterized as a mistake in a letter recently addressed to the Secretary, in which the writer said that "the free-coinage advocates point to those mistakes and claim they are intentional, lugged in to prove that the unit of value established by this government was gold." The Secretary, in a communication just made public, points out that nothing whatever is said about the "unit of value," or about a standard of measure of value, except that the "standard was double," meaning, of course, that the legal standard was based on both gold and silver. He declares himself unable to discover any error in the statement, for if 247.50 grains of pure gold constitutes $10, or "units," it is evident that 24.75 grains of pure gold must constitute one "unit." The 24.75 grains of pure gold constitute a gold unit, and 371.25 grains of pure silver constituted a silver unit, and the "dollar" was the unit, whether it was composed of gold or silver.

Secretary Carlisle explains that the unit is merely the name or denomination of the coin used in computation and in keeping accounts, and that if Congress had seen proper to make the dime a unit instead of the dollar, it would not have changed the actual or legal value of the coins to any extent whatever. The only effect of such a provision, he says, would have been that instead of counting in dollars and fractions of dollars, as we now do, we would have counted in dimes and fractions of dimes; that is, instead of saying "one dollar," or "one dollar and a-half," we would have said "ten dimes," or "fifteen dimes." For example, the franc, worth a little over 19 cents, is the unit in France, and the mark, worth about 24 cents, is the unit in Germany, no matter whether the franc or mark is represented by coin or by paper; but, notwithstanding the fact that their unit is much smaller than ours, and, therefore, much less valuable, their standard of value is as high as ours. The defect in the reasoning of the free silver advocates on this subject is, the Secretary says, that they constantly confuse the unit of account with the standard or measure of value, they having no necessary connection with each other.

The Secretary says that the words "unit of value" were never used in any coinage law of the United States until February 12, 1873, and then they were applied to the gold dollar containing 23.22 grains of pure gold, or 25.8 grains of standard gold. The fact that this quantity of gold is not now coined into a single piece is, he says, wholly immaterial. That quantity of gold constitutes a standard or measure of value for our dollar, and when men contract for payment in dollars they mean dollars equal in value to 25.8 grains of standard gold. The authors of the act of 1792, the Secretary continues, established (legally) two standards—a gold standard and a silver standard—but, in fact, both of them could not be continuously used at the same time. As long as 371.75 grains of pure silver were actually equal in value to 24.75 grains of pure gold, there was, in fact, but one standard, although represented by two metals, but when these quantities of gold and silver ceased to be equal to each other in value, one or the other necessarily disappeared as a standard.

An interesting incident of the week has been the visit of Li Hung Chang, the noted Chinese statesman whose reputation long since became international. The great Chinaman comes to the United States as the guest of the nation, continuing a course of travel which has included the principal countries abroad. While here the distinguished visitor will have an opportunity of forming an impression at first hand of the way in which the resources of civilization are utilized by a nation which represents in a special way the progressive spirit of the west, and if, as is thought, he is charged with a political mission, the circumstances attending his visit will, it is to be hoped, lubricate the machinery of diplomacy.

The growing navy of the United States has secured a decided acquisition in the new cruiser Brooklyn. This vessel is now known to stand at the head of her class in the world. In a run this week she maintained an average speed of 21.92 knots an hour, a rate of speed which was increased during part of the run to 22 9/10 knots. This performance, which has given the cruiser such high rank, has earned for her builders, the Cramps, a premium of $350,000. The possession of such vessels as this will give the new navy a distinguished place as regards quality among the navies of the world.

GOLD IMPORTS BEGINNING.

The preëminently important financial event of the week was the demoralization of the foreign exchange market, and the announcement that $12,000,000 gold had been forwarded to this city from Europe. Indeed, the prospects are that the prediction of an influx of some $25,000,000 or more within the next few weeks will be completely verified. It is not claimed in any quarter that the foreign exchange syndicate has produced this situation. The lack of such interference is one of the most noticeable features of the situation. The decline of exchange to 4.83½ or less for demand sterling, a lower rate than has prevailed for three years, is the result of a pressure of commercial and loan bills upon a market that, owing to the high rates for money and the difficulty in obtaining mercantile discounts, is absolutely bare of buyers. In the beginning of the gold engagements, at the close of last week, it would seem that some inducement or commission (such as the small premium of ¼ to ⅜ of 1 per cent. alleged to have been offered for "free" gold) was an element in the case. The need of anything of the kind has, however, disappeared with the further decline in exchange, and though the open market at London has been cleared of its floating supply of gold, and both the Bank of England and that of France have raised their price for gold bars, there seems to be a fair profit to the bankers in the shipments.

It is yet too early for this influx of gold to affect the money market. In fact, the arrangements of the foreign banking houses to this end would seem temporarily to have had a disturbing effect, and to have aided in maintaining the closeness of the loan market and in forcing rates for call money up to 10@15 per cent., as was at one time quoted this week. The important consideration, however, is that the gold imports have aided the banks in avoiding the issue of Clearing House loan certificates. With the surplus reserves down to $9,000,000, with confidence unsettled, and with the country drawing heavily on New York, such a course seemed almost inevitable. It was not a matter for surprise that the Bank of Commerce, which, as in 1893, took the lead in this matter, should have made a conditional application to the Clearing House loan committee for the issue of $1,000,000 of the certificates if it should be deemed necessary, and if other institutions should also apply for them. The matter was taken up last Monday, but it was understood that a number of banks opposed the action and counseled delay. While it would, perhaps, facilitate the work of accommodating the public and the out-of-town banks, there is a strong feeling that conservatism should rule in the matter, and that the resort to such a step should only be taken in a last emergency. The inflow of gold, which will now continue with each arriving steamer, tends to make this prudent and conservative course easier to follow.

MR. McKINLEY ON THE MONETARY ISSUE.

Mr. McKinley's letter of acceptance has at length been placed before the public. The conditions of the campaign cause it to present a double aspect. From one point of view, and that vastly the most important, it is to be regarded as the pronouncement of the candidate who must occupy the presidential chair if the candidate of the free-coinage advocates is to be defeated, and from this point of view, it need scarcely be said, it will appeal to a far wider constituency than that which comprises the membership of the Republican party, for many votes will be cast for Mr. McKinley by men who are not Republicans. From another point of view, of course, the letter will naturally be considered primarily as the declaration of a leader of his party upon cardinal doctrines of party faith. It is from the former of these points of view that the letter appeals to us for consideration here.

The letter lends itself naturally to this method of treatment, for the author has wisely, and with due recognition of the importance of the issue discussed, given the first place and about half the body of the letter to a discussion of the currency question which, we venture to say, will exceed the expectations generally entertained by the public. Mr. McKinley points out that the mere declaration of the purpose of the Chicago convention has been regarded as constituting a menace to our financial and industrial interests and has already created universal alarm, involving great peril to the credit and business of the country—a peril so grave that conservative men everywhere are breaking away from their old party associations and uniting with other patriotic citizens in emphatic protest against the platform. Warning the people not to be misled by phrases, he directs attention to the fact that free silver would not mean that silver dollars were to be freely had without cost or labor. It would mean the free use of the mints of the United States for the few who are owners of silver bullion, but would make silver coin no freer to the many who are engaged in other enterprises. It would not, he says, make labor easier, the hours of labor shorter, or the pay better. It would not make farming less laborious or more profitable. It would not start a factory or make a demand for an additional day's labor. It would create no new occupations. It would add nothing to the comfort of the masses, the capital of the people, or the wealth of the nation. It seeks to introduce a new measure of value, but would add no value to the thing measured. It would not conserve values. On the contrary, it would derange all existing values. It would not restore business confidence, but its direct effect would be to destroy the little which yet remains.

The real meaning of the coinage plank adopted at Chicago is shown by Mr. McKinley to be that any one may take a quantity of silver bullion, now worth 53 cents, to the mints of the United States, have it coined at the expense of the government, and receive for it a silver dollar which shall be legal tender for the payment of all debts, public and private. "The owner of the silver bullion," he points out, "would get the silver dollar. It would belong to him and nobody else. Other people would get it only by their labor, the products of their land, or something of value. The bullion owner, on the basis of present values, would receive the silver dollar for 53 cents worth of silver, and other people would be required to receive it as a full dollar in the payment of debts. The government would get nothing from the transaction. It would bear the expense of coining the silver, and the community would suffer loss by its use."

He next explains the difference between the silver dollars now in use and those which would be in use under free coinage by saying that the silver dollars now in use were coined on account of the government and not for private account or gain, and the government has solemnly agreed to keep them as good as the best dollars we have, whereas the silver dollars minted under the system of free coinage proposed would not be maintained at a parity with gold, inasmuch as there would be no obligation resting upon the government to do it, and that if there were it would be powerless to do it. The government, Mr. McKinley says, bought the silver bullion contained in the silver dollar at very much less than its coinage value. It paid it out to its creditors and put it in circulation among the people at its face value of 100 cents, or a full dollar. It required the people to accept it as a legal tender, and is thus morally bound to maintain it at a parity with gold, which was at the time of the purchase, as now, the recognized standard with us, and the most enlightened nations of the world. The government having issued and circulated the silver dollar, it must in honor protect the holder from loss. This obligation it has so far sacredly kept. Not only is there a moral obligation, but there is a legal obligation expressed in public statute to maintain the parity. These dollars, then, are not the same as the dollars which would be issued under free coinage. They would be the same in form, but different in value. The government would have no part in the transaction except to coin the silver bullion into dollars. It would share in no part of the profit. It would take upon itself no obligation. It would not put the dollars into circulation. It could only get them, as any citizen would get them, by giving something for them. It would deliver them to those who deposited the silver, and its connection with the transaction would there end.

In the next place it is pointed out that if the free and unlimited coinage of silver at the ratio of 16 to 1 would, as some of its advocates assert, make 53 cents in silver worth 100 cents and the silver dollar equal in value to the gold dollar, then we would have no cheaper money than now, and it would be no easier to get. That such would be the result, however, is against reason, and is contradicted by the experience of all countries in all times. Mexico and China, for example, have tried the experiment. Mexico has free coinage of silver and gold at a ratio slightly in excess of sixteen and a half ounces of silver to one ounce of gold, and while her mints are freely open to both metals at that ratio, not a single dollar in gold bullion is coined and circulated as money. Gold has been driven out of circulation in these countries, and they are on a silver basis alone. Until an international agreement is had, Mr. McKinley urges, it is the plain duty of the United States to maintain the gold standard, which is the recognized and sole standard of the great commercial nations of the world, with which we trade more largely than any other, 84 per cent. of our foreign trade for the fiscal year 1895 having been with gold-standard countries, and our trade with other countries being settled on a gold basis.

As is pointed out by Mr. McKinley, there can be no complaint of the treatment of silver by the United States during the past quarter of a century. Chiefly by means of legislation during and since 1878, there has been put into circulation an amount of silver many times in excess of that coined in the preceding years of the nation's history, and as a result the largest use of silver consistent with financial safety has been secured. There are those who think that the limit of financial prudence has already been exceeded, and false lights must not be permitted to lure the country across the danger line. One certain effect of free coinage would be the retirement of circulation of at least $500,000,000 in gold, resulting in a large decrease of our per capita circulation.

Mr. McKinley takes high and wise ground when he declares that if there is any one thing which should be free from speculation and fluctuation, it is the money of a country, which ought never to be the subject of mere partisan contention. When we part with our labor, our products or our property we should, he says rightly, receive in return money which is as stable and unchanging in value as the ingenuity of honest men can make it. Debasement of the currency means destruction of values, and no one suffers so much from cheap money as the farmers and laborers, who are the first to feel its bad effects and the last to recover from them. This has been the uniform experience of all countries, and here as elsewhere, the poor and not the rich are always the greatest sufferers from every attempt to debase our money. We have said that Mr. McKinley's discussion of the monetary question will more than meet the expectation which had been formed of it by the public generally. One can go further with propriety and say that the portion of his letter in which the argument for sound money is comprised has an interest over and above that which naturally attaches to an official pronouncement of a candidate, and constitutes a real contribution to the discussion now under way.

THE OBJECTION TO "POOLING."

To the Editor of BRADSTREET'S:

SIR—Several articles on the subject of railroad combinations and competition that were published in these columns about ten years ago attracted a considerable amount of attention. The Interstate Commerce Commission dates from that period, and the discussion of "pooling," in its various forms, was then fresh and interesting. The ground taken at that time was that the public interest permitted, if, indeed, it did not welcome, agreements between carriers to abolish competitive charges, but forbade agreements to abolish competitive service. The expression "combination in rates, competition in facilities," was used as a single phrase to cover the requirements of public policy.

The lapse of years has served to demonstrate very clearly the soundness of these views. Most of the development in the traffic department of the railroad business since 1885 has been in the direction of the maintenance of agreed rates by the observance of good faith rather than by the removal of temptations to violate agreements. The highest expression of this significant spirit is found in the Joint Traffic Association. "Danger of excessive charges for transportation no longer exists in this country," said the New York Board of Trade and Transportation not long ago. "The interests of the public and of the railroads are mutual, and the public is best served by reasonable, uniform and stable rates." Really competitive rates were long since shown to be an impossibility. Competition in rates means, necessarily, secret and unjust discriminations in favor of the strong and against the weak. The business of the Joint Traffic Association in its territory, and of similar associations in theirs, is to maintain, in the interests of carriers and people alike, "uniform and stable rates," but this

is done, as a rule, not by the physical device of pooling, but by the exercise of moral and legal suasion. Every member of the Joint Traffic Association, for example, remains free to secure competitive traffic by means of "gilt-edged" passenger trains and "express freight" trains, and all of the other arts known to the soliciting agent, except that which is now supposed to be the lost art of cutting rates. Let transportation rates be established by agreement and maintained by honor, reinforced by the familiar "associations," and no considerable part of the people can long suffer injustice, such are the force of the laws and of public opinion and the conditions of traffic throughout the United States. Experience has shown abundantly that far less injustice will be done under such circumstances than under a system of unrestrained competition in charges.

But, on the other hand, the preservation of competitive facilities for the transportation of men and of merchandise promotes the general welfare and is in harmony with the spirit of the age. The effect of pooling is to restrict competition in that department of the transportation service in which alone fair and open competition is possible, even though its avowed object is not this, but is to compel men to keep their word. Whether the pooling takes the form of a division of competitive traffic, or the cessation of soliciting on the part of strong lines, or the division of earnings, its result is to discourage invention, to elevate mediocrity, to take away conveniences previously enjoyed by the community, and, in general, to hinder progress.

The present occasion for these observations is afforded by a letter in the *Railroad Gazette* from W. M. Acworth, the well-known English authority on transportation, and by an article in the same issue of our contemporary on "The Advertising of Freight Time from New York." Mr. Acworth, in giving a long list of new express passenger trains in England, remarks that "the last few years have seen an enormous improvement in the convenience of the service between London and Scotland," and adds that English expert opinion demurs to the view of some that "competition is the most burdensome and least efficacious method of securing to the public good and cheap railway service."

Mr. Acworth, in fact, quotes the high authority of *Engineering*, to the effect that "competition may be an expensive luxury, but, at all events, it is a most effective stimulant, and we hope that it may be long before this factor will be eliminated from our English railway system." In England, as well as here, competitive rates are a thing of the past, but, as just indicated, competitive facilities are made, under the stress of competition, better and better year by year, and the keenest thinkers pray that the competition may be preserved.

In the other field of activity mentioned as inspiring this reference to our former treatment of the subject, the progress due to competition has been no less significant. A leading western railroad began several years ago to distribute in New York circulars showing the time made by some of the freight trains west-bound. This is a natural sequence of the freedom with which passenger train time-tables are advertised. Great financial interests are often involved in the prompt dispatch, forwarding and delivery of freight, as the careful and systematic development of the service of the express companies sufficiently proves. Until recently the enterprising western road referred to had no imitators, but last autumn competing companies discovered that a pace had been set, and a number of the fast freight lines operating out of New York, impelled by the existence of competition to take action, "began to issue flyers advertising their wares." These circulars show more or less plainly regular schedules for the movement of freight trains from New York to the leading interior cities similar to the familiar passenger train time-tables, and the *Railroad Gazette* draws the natural conclusion that "there seems to be no greater objection to advertising freight trains than passenger trains, if only the advertised time is made."

There is a perfect illustration of the beneficial working of the rule that was laid down at the outset—"combination in rates, competition in facilities." The fast freight lines referred to to carry the freight that they secure, over their rival routes, to their common destinations at agreed rates that are now most scrupulously adhered to. That the rates are fixed and uniform helps rather than harms the greater number of shippers and receivers. At the same time the existence of competition in facilities has increased the speed and the number of trains, has stimulated the use of the latest inventions in cars for special service, has led to the appointment of convenient hours for departure and arrival, and has favored the adoption of regular schedules of freight transportation and the exertion of every effort to live up to them when adopted. That in the passenger department competition in facilities, under agreed rates, has similarly led to the present superior train service by several routes between New York and Chicago, for example, is too obvious to need assertion.

Jacksonville, Fla. E. W. J.

SPEAKER REED'S OLD ORCHARD SPEECH.

Mr. Reed's speech at Old Orchard, Me., will command wide attention, as does every contribution made by him to the discussion of public questions. His treatment of the monetary issue in the present campaign is marked by the breadth, simplicity and directness which render him one of the most forcible and refreshing personalities in American public life. In touching upon the silver question he reminded his hearers that our only safe footing in this world is on the things we know, and asked whether any other nation had ever succeeded in what we are asked to undertake, and answered not one. On the other hand, Mexico, supported by the great empire of China, with its 400,000,000 of people, has failed to lift silver above its market price. He said he was well aware that the United States was mightier than Mexico or China, or than both combined, but still was not omnipotent, being only a part of the world. "We cannot," he said, "fix the price of wheat. Chicago, standing for the whole country, tried that once, and was worsted in the struggle. We tried to fix the price of greenbacks by calling them a dollar, but never one of them was a dollar until 1879, when we promised to give a dollar, and backed up the promise with a hundred millions of gold. When gold was at 200 not all the power of this country, with 2,000,000 men in arms, could make a greenback buy more than 50 cents' worth of anything except human labor."

He put the dilemma confronting the silver men as follows: Either the silver men expect silver under free coinage to go to par, or they do not. If they do, they have not one single fact on which to depend. All human history is not only against them, but overwhelmingly so. If overvaluation of silver by three cents on a dollar drove all the gold out of our country for sixty years once in its history, what will 50 cents of overvaluation do? We shall then, the speaker said, be on a silver basis, whatever that may be. If we get there, the basis will either be stable or unstable. If it is stable, what improvement will that be? Are there any more potatoes in four pecks than in one bushel? Are 133 75-cent dollars worth any more than 100 100-cent dollars? Does a dollar get any more valuation by changing it into coppers? But suppose the new standard is unstable, what will happen then? The answer of experience is plain. All uncertainties are a detriment to business. For the last fifty years all the struggle of business has been toward certainties. Business has long ago ceased to be gambling. Small and sure profits often repeated are the foundation of modern wealth. The Suez Canal, the ocean cable, the swift steamships and the swiftest railroads are all harnessed into this service; whoever that can have a stable currency swings off into an unstable currency sets himself against the civilized world and must take the consequences.

In answer to the suggestion of the silver advocates that if we do swing off from Europe we can join the great silver-using countries, China and Japan and Mexico, with their 900,000,000 inhabitants, and exchange the European trade for that of those countries, Mr. Reed said, in the first place, there are no 900,000,000 of silver-using people. One hundred and fifty millions of these outsiders are on a paper basis. We could not get them even by giving them greenbacks. The remaining people take only fifty millions' worth of our products now, whereas the gold countries take seven hundred and sixty-five millions, or about thirteen times as much. Great Britain alone takes four hundred millions of our products, eight times as much as all the silver countries in the world. We buy of silver countries one hundred and seventeen millions, of gold countries five hundred and thirty. Putting these figures together, our trade with silver countries is one hundred and sixty-nine millions, with gold countries one thousand three hundred millions—one to nine. And the speaker asked whether any man of sense wanted to exchange nine dollars' worth of trade to one.

Mr. Reed's remarks upon the attempt to import a sectional issue into the campaign were sensible. He said there can be no such contest as has been suggested between east and west. "Our interests are identical. With their growth comes our growth. We cannot go on alone. We have sent our children there. Our money is there. No misfortune can happen to them that does not happen to us. We here have full esteem for the pioneers of the west, and rejoice in their prosperity. They are all a brave and vigorous people. As Burke said of the younger Pitt, they are 'not chips of the old block, but the old block itself.' Every wise man agrees that beyond the Mississippi lies the great wealth of the days to come. In the development of this wealth we are all interested, and we in the east are not the unwise men to believe that we are not concerned in the progress and future of the west. Unfounded sectional differences are without excuse, and it will be woe to those who try to foment them. The west is too vigorous not to find out the truth, and is too valiant not to follow it when found. What the west needs is loanable capital, which will develop its resources. No part of this Union is so concerned in restoring confidence as the undeveloped territory."

CHICAGO'S SPECULATIVE TROUBLES.

A fortnight ago it seemed to be a settled fact that the unfortunate speculation in the local market, based on Diamond Match and New York Biscuit stocks, would be arranged in a satisfactory manner. It was given out that not only were the affairs of the two corporations, whose securities had been made the objects of the inflation, in the best possible condition, but that so encouraging were the prospects that the banks and capitalists who had loaned money on the security of Diamond Match stock at inflated prices were ready to join in a liquidation syndicate. In other words, the Baring Brothers' affair was to be repeated on the shores of Lake Michigan, with the united banking capital of the city of Chicago playing the part which, in 1890, when the Argentine crisis came, was assumed by the Bank of England under the lead of Mr. Lidderdale. The whole matter was apparently arranged. The agreements, as already referred to in these columns, were ready for signature. And yet the entire transaction has gone by the board. The banks with which the stock of the Diamond Match and New York Biscuit companies, purchased by the Messrs. Moore, have refused to sign the pooling agreement. The local Stock Exchange has remained closed in spite of the protests of its members who were in no way involved in transactions in the Match or Biscuit pool, and the whole matter has hung fire in a very suggestive and not to say disheartening way.

A report by the committee of the Chicago Stock Exchange appointed to investigate the whole matter seems to set at rest all doubt as to whether there was even any foundation for the belief that the Moores' speculation in Diamond Match and New York Biscuit stocks could be satisfactorily arranged. In fact, the committee confirms the worst rumors and impressions that could be drawn from the long delay and hesitation. There has been no disposition in other cities, especially in the east, to make undue criticisms on the attitude of the Chicago business men, bankers and brokers who had undertaken the task of arranging what seemed to be an ordinary case of over-speculation. The fact, however, that the Messrs. Moore have made no statement seemed quite strange, and this was followed up by stories of the misuse of corporate funds for the purpose of speculating in their own securities. All of this is more than borne out by the report of the special committee of the Chicago Stock Exchange, which not only indicates that it is impossible to arrange the affairs of the Messrs. Moore on any basis which would leave them in control of the affairs of the companies in question, but confirms quite unsettling rumors in regard to the misuse of funds and the employment of the resources and credit of the companies to support speculation in their own stocks.

This is a melancholy story. Wall street saw it when the old Cordage Trust came down in ruin. It has been too often observed in connection with industrial concerns. The Chicago instance is one which

calls loudly for prompt and certain interference. If half of what is asserted is true in this matter, it is one that should be made an example of; and if, as the report of the Chicago Stock Exchange committee would intimate, there is a pool of wealthy and influential capitalists behind it all, their participation in the losses should be made to include full and complete exposure as well as participation in the financial settlement.

DEMORALIZED WESTERN RATES.

Matters of graver concern have combined to distract the attention of the investing and speculative public from the rate situation at the west. Occupied as the attention of Wall street is with the political outlook, the stringency of money, and the current importations of gold, the demoralization of rates which affects the railroads west and southwest of Chicago, and which is even having an influence upon the trunk lines, has not been the factor that it would under ordinary circumstances. A bitter rate war is, however, in progress on east-bound business. It is conducted at a pace that can scarcely fail to affect the earnings of the granger and southwestern railroad companies, and at the same time its principal manifestations are in connection with the only classes of business in which there is at present any marked activity. It may, indeed, be said that the situation is not an unmixed evil at the time, however unfavorable the effects of the rate-cutting may be on the revenues of the railroad corporations which are involved. One result has been to stimulate the movement of grain, and presumably to increase the exports thereof, which at this juncture tend to depress exchange and to facilitate the importation of gold.

The present troubles are the culmination of the long friction between the lines extending from the Missouri river to Chicago and St. Louis and the roads leading to gulf ports. The strong efforts that were being made in the latter quarter to secure a large share of grain export business have been frequently noted in these columns. With the present shipping season, however, the matter has assumed an acute phase. The gulf roads, particularly those extending to the port of Galveston, have cut rates on grain to a fairly unprofitable level, and the Chicago lines have responded by making quotations which have to some extent turned the tide of this class of tonnage toward the east, though it is evident that in doing so they are presumably taking business on an unremunerative basis. It may also be noticed that several of the roads, like the Atchison and Rock Island, which possess lines to the gulf or connections with gulf roads, as well as Chicago lines, are doubly interested in the outcome. Another remarkable fact in the same connection is that the demoralization extends only to east-bound business. West-bound merchandise rates have not, apparently, been affected, though owing to the very limited amount of such traffic that is moving, in consequence of the restriction of general trade, there is more or less inducement for the roads to make concessions in charges, as is usual in such cases, where sacrifices become necessary for the sake of obtaining traffic.

Nor, as is generally the case under such circumstances, has it been found possible to localize the disturbance. Instead of remaining a fight between the gulf and the Chicago roads in the southwest, the friction has spread throughout the entire territory west of Chicago, till now the northwestern granger lines are also actively engaged in cutting competitive rates, the situation there being further complicated by the active interference of the lake navigation lines and the Canadian Pacific. The extent of the demoralization may be gathered from the following comparison of the old and the cut rates now prevalent on 5th to 11th class freight, both inclusive, from Chicago to St. Paul, the figures being in cents per 100 pounds:

Class.	*5th.*	*6th.*	*7th.*	*8th.*	*9th.*	*10th.*	*11th.*
Old tariff	20	18	25	20	17	14	13
Cut rates	10	10	12	10	10	10	10

The entire schedule, other than for less than carload lots, has thus been affected, and it is feared that a restoration of charges to a normal level cannot be accomplished until the closing of lake navigation will permit such action. While the trunk lines east of Chicago have not become openly involved in the competitive outbreak, their rates on joint traffic from the west have naturally been affected by the present struggle in that quarter. The situation in this respect is summed up by one authority on the subject in the following words: "There is pressure being brought to bear on eastern lines for further reduction in grain rates. Lines west of Chicago have reduced rates in competition with cutting of rates to the gulf to a point where they cannot reduce further, and that eastern roads must lower their rates if the diversion of traffic to the gulf is to be checked. Packing-house products are now following grain to the gulf, and unless eastern roads interfere, New Orleans and Galveston will get and keep a large amount of business which has hitherto gone to the Atlantic seaboard."

MR. BRYAN ON RAILROAD RATES.

One of the many questionable assertions made by Mr. Bryan in his Madison Square speech was to the effect that railroad rates have not been reduced to keep pace with falling prices. Those who are acquainted with matters relating to transportation are of course well aware that railroad rates have, in fact, declined in a marked degree during the period dealt with by Mr. Bryan, but there are, no doubt, many persons who may be misled by his statement, and it is worth while to disabuse their minds of an erroneous impression. An effort is made to accomplish this result in an open letter to Mr. Bryan, in which Mr. F. B. Thurber sets forth the facts embodied in a report adopted by the National Board of Trade at its last annual meeting, which aims to show that rates for the transportation of freight have fallen more than the prices of most commodities.

This report sets forth as an illustration of the progressive reduction in the charge of transportation that the average charge for carrying a ton of freight one mile on thirteen of the most important railroads of the United States during 1865 was 3.08c.; in 1870, 1.81c.; in 1875, 1.36c.; in 1880, 1.01c.; in 1885, 0.83c.; in 1890, 0.77c.; in 1893, 0.76c. These railroads performed one-third of the entire freight transportation during 1893, and from the figures given it appears that 0.76c. would pay for as much transportation over their lines in 1893 as could have been obtained for 3.08c. twenty-eight years earlier. This reduction, amounting to three-fourths the average rate for 1865, has been exceeded, the report says, in that of the lessened price of but few, even of those articles in the manufacture of which new inventions have worked the most radical changes. The entire transportation performed by the railroads of the United States during the twelve years ending June 30, 1894, was equivalent to moving 136,799,677,822 passengers and 807,935,382,838 tons of freight one mile, and had rates averaging as high as those of 1882 been collected upon this traffic, the railroads would have earned $2,629,043,459 more than they actually received.

As bearing on the question whether the railroads are securing too high rates for the service they render to the public, the report points out that in 1893 there were about 874,000 men employed on the railroads of the United States; that in 1894 this number had fallen to about 780,000, and that since 1893 nearly one-fourth of the mileage of the United States has gone into the hands of receivers. The throwing out of employment of an army of 100,000 men was only a part of the difficulty. Not only were the number of those employed decreased, but the incomes of those who remained were lowered. There was a general cut of wages in all grades of the service. Five thousand general officers suffered as well as 100,000 trackmen, 150,000 shopmen, and over 500,000 other operatives. Wages were lowered directly and time was reduced, bringing about the same results indirectly. Industries depending on railroads for a demand were affected, and many millions of people besides those actually discharged and their dependents found themselves less able to buy the necessaries of life. During the year ending June 30, 1894, railroad stock, having par value of $3,660,150,094, or 63½ per cent. of the total, received no dividend. During the three years ending December 31, 1894, 9,178 miles of road, capitalized at $494,821,000, were sold under foreclosure. From January 1 to July 1, 1895, these totals were increased by 2,049 miles, capitalized at $149,615,000 each, respectively, which went into the hands of receivers and were sold under foreclosure.

Mr. Thurber says that these statistics of diminishing returns to investors, financial disasters and widespread insolvency, clearly indicate that the present railroad charges should not be regarded too high unless it is deemed desirable to reduce all railroad corporations to a condition of uniform and hopeless bankruptcy, and that whatever may be the opinions of citizens on the other questions involved in the present political campaign, nothing can be gained by disseminating erroneous views in regard to railroads. A progressive reduction from 3.08c. per ton mile in 1865 to 0.76c. per ton mile in 1893 and 0.75c. in 1895 is, he insists, greater than the reduction in most other commodities. This refutation of Mr. Bryan's statement is of special interest, as coming from a man who has played a part of some prominence as a critic of railroad management and methods.

MINING PROSPECTS IN BRITISH COLUMBIA.

Some points have been communicated regarding the boom in mining in British Columbia to leading newspapers of Toronto by a representative of The Bradstreet Company, who has just returned from a visit to that interesting region. It is, of course, unnecessary to describe the natural advantages and geographical situation of British Columbia. Its immense area, the second largest province in the Dominion, embracing as it does all of that country from the Rocky mountains to the Pacific coast, leaves room for an immense agricultural and mineral development. This appears true particularly respecting the gold-mining regions of the Kootenay.

Two years ago Rossland, one of the most prominent of the mining centers of this region, numbered a population of between thirty and forty, and one house only. It now possesses at least six thousand inhabitants, and is said to be built up as no American mining town of its size or age is constructed. The same appears to be true in a greater or less degree of other camps. Their progress has been second only to the outturn of the mines themselves. The various camps combined form a paying market for dry goods, hardware, machinery and the numberless other necessities.

It is of interest to Americans to learn that a prominent part has been taken by the merchants of the state of Washington in supplying the needs of these gold, silver, lead and copper mining districts of British Columbia. Estimates made show that one-sixtieth of all the receipts for customs and excise by the Canadian government has been collected by the custom houses in West Kootenay district, and at least one-third of all the supplies used in those mining centers have been brought in from the United States.

Another fact worthy of consideration is that a goodly portion of the goods sold by eastern Canada "have been brought in over American railways instead of the Canadian Pacific Railway, especially during the winter months, because of defective transportation." The greater portion of the vegetables and hay, nearly all the sheep and hogs, are brought in from the states of Washington and Oregon.

The fact that such a large share of this valuable trade is going to the American side of the boundary is naturally a matter of concern to Canadian business men, who are devising means for diverting the trade to the Canadian side of the border. Better transportation facilities by Canadian railways are declared necessary.

"What they need, and what the mining camps of British Columbia need," says the recent visitor to Kootenay, "is a quick and cheap transportation of all that the Manitoba and northwest farmer has to sell and all that the British Columbia miner desires to consume. The present arrangements do not supply the needs of either the people of Manitoba and the Northwest or those in British Columbia. Mining in British Columbia has just begun; it can be scarcely said that it has even begun, as anyone who is at all familiar with the country from Fort Steele west to Hope, near the Pacific coast, can testify. A line of railway through the Crow's Nest Pass, connecting with the inland waterways of British Columbia (Lake Kootenay and the Columbia river) through by way of Nelson, Rossland and the Okanagan district would, when the district is fully developed, find such a traffic, both passenger and freight, that not only would it pay all fixed charges for its construction and rolling stock, but also operating expenses, and, no doubt, reasonable dividends upon the stock."

An enormous output of mineral wealth is confidently looked for in British Columbia in the near future. The Rossland district is expected to turn out a gross product of $7,000,000 to $8,000,000 during the coming year, and a net outturn of $5,000,000, it is said, is expected from the Slocan and Ainsworth districts this year. It is estimated that with the construction of the Crow's Nest Pass railway the mining

industry of southern British Columbia alone would amount to $30,000,000 or $40,000,000 a year within five years, a greater output, it is declared, than that of any state in the American Union. In the meantime, there is abundant evidence, through the building and projected building of railways, etc., by the Americans, that they are fully aware of the importance of securing this market.

"With the present outlook, and what undoubtedly must come," it was concluded, "there ought to be in British Columbia alone, and especially along the southern portion of it, a million people within the next twenty-five years. And a million mining people in British Columbia is worth as much, if not more, to the people east of the Rocky mountains than 4,000,000 people in Great Britain, because they are extravagant consumers, and must have the best of everything."

ENGLISH RAILROAD PROSPERITY.

While the daily cables describing the course of the London Stock Exchange have continued to give tidings of an uninterrupted "boom" in the stocks of British railway corporations, there has been little to give an idea of the substantial basis on which this appreciation of what London calls "home rails" actually rests. The returns of the railroads of the United Kingdom for the first half of the year are, however, now at hand, and would indicate that English investors and speculators have justification for their confidence in the class of values in question. The rise has looked at a distance as if it were an exaggeration and partially fictitious. With the earnings of the companies for the past six months before us, it is, however, easy to see how the movement has attained such proportions, and, moreover, how the market for English railroad shares has preserved and improved upon its advances. The London *Economist*, commenting upon the matter, says in its latest issue: "It is a long time since our home railways have been able to achieve such satisfactory results for their ordinary shareholders as they have done in the six months for which the accounts have just been issued. As compared with the first half of 1895 the improvement is very remarkable, but it has to be remembered that in that period the receipts were greatly reduced in consequence of the inclement weather which prevailed for the greater part of the first quarter, while the recovery in trade which afterwards manifested itself came too late to enable the companies to recoup themselves to any great extent for the losses incurred during the great frost. Carrying the comparison further back, however, the success of the past half year places it far in front of any similar period in recent years, since, applying the test of the average dividend declared on the ordinary stocks of the fifteen companies dealt with in this review, we find that it is higher than in any first half since 1890, the statement being as follows:

	First half year, per cent.		First half year, per cent.
1890	4⅝	1891	4 1-16
1895	3⅝	1890	4½
1894	4⅛	1889	4 9-16
1893	3 13-16	1888	4
1892	3⅞	1887	3⅜

The same journal follows this with a detailed analysis of the revenue accounts of the fifteen railroad corporations in question for the six months. According to this it seems that their total gross earnings for that period were £33,017,521, an increase of £1,992,939. Their working expenses are given as £18,498,996, an increase of £818,312, while the net earnings of the roads selected for comparison amount in all to £14,518,526, which is a gain of no less than £1,174,627 over the results of the corresponding period in 1895. As a result they have in every case been able to make a more or less substantial increase in the dividend rate, the average gain in this respect being at the rate of ⅞ per cent. per annum, a decidedly important change when it is considered how low interest rates are in Great Britain, and how decided has been the shrinkage in the income return upon all desirable classes of investments known to the London stock market. Taking the individual companies, the smallest gain in dividends was by the Metropolitan (the London underground system), which shows an increase of ⅜ per cent. Nine companies out of the fifteen have, however, declared dividends for the half year which exceed by 1 per cent. per annum or more those of the like period last year, the list including the most important British companies, like the London & Northwestern, the Great Western, the Midland, the North Eastern, the Lancashire & Yorkshire, the London, Brighton & South Coast, the Manchester, Sheffield & Lincolnshire, and the London, Chatham & Dover. The increase in gross receipts was derived principally from the passenger and merchandise branches, and a feature that was referred to by many of the chairmen at the meetings was the renewed elasticity in the receipts from first and second-class passengers, which had been drooping for many years past. The results of this half year have given some support to the opponents of the abolition of second-class carriages. The mineral traffic receipts were slightly larger than in the same period last year, but the growth was very small relatively to the total increase. "The live-stock traffic, too," says the *Economist*, "was affected by the depression in agriculture, our farmers being less and less able to compete with the enormous supplies of live and dead meat poured into our markets from abroad, and this branch of revenue is the only one that exhibits an actual decline as compared with last year.

"Of almost as much importance as the gain in gross receipts in providing the increased balance of net revenue was the moderate rate of growth in working expenditure. The mild season enabled them to work with a smaller staff than would have been the case in severe weather, while the extra expenditure involved in meeting the new requirements of the Board of Trade a year or two ago has now come to an end. The growth in the wages bill was, therefore, comparatively moderate in amount, and so was the expenditure on material, the cost of which has remained at a very low level in spite of the greater activity in trade. The greatest economy of all, however, was effected in the expenditure on fuel. Ever since the great strike of coal miners in 1893 the output of coal has been running ahead of the demand, with the result that prices have fallen to a very low level, and railway companies and other large consumers have been able to make contracts on terms very advantageous to themselves. In the item of fuel there was, consequently, a substantial reduction in the total amount paid, and the significance of this can be better appreciated on reference to the further table given below, showing that these fifteen companies ran 5,737,000 train miles more in the past half year than were run in the corresponding six months of 1895."

The figures, therefore, bear out the belief that English railroads have enjoyed a period of exceptional prosperity, sharing to the fullest extent in the general expansion of trade there, and furnishing in this respect a very significant commentary upon the position of our own railroads in connection with the financial disturbance and intermittent business depression of the past year.

MORE GOLD FROM SOUTH AFRICA.

The South African gold fields seem to be entering upon a new period of prosperity and expansion. The condemnation of Jameson and his comrades in that winter's raid would appear to have practically settled the political agitation in the Transvaal, and the diplomatic sparring between the British government and the authorities of the republic in regard to the latter's armaments and so forth have ceased to affect the foreign business interests that are engaged in the mining industry. The latest news from Rhodesia is that the Matabele insurrection is collapsing, which fact would pave the way for another forward movement in that section of the Dark Continent. It is not strange, therefore, that the London mining market should exhibit signs of renewed strength and speculative activity, and that the public there, which lately gave indications of a willingness to pay attention to American securities, should have returned to the mining market.

The indications of the moment are, in fact, that the gold output of South Africa, and of the Witwatersrand district of the Transvaal in particular, will reach proportions hitherto unparalleled. As a result of the better political relations between the Boers and the Uitlanders, there have been some important modifications of the conditions under which the mines of the Rand are operated. The rates upon the railways which supply the Johannesburg district with fuel and timber have been reduced, an intelligent educational bill has been passed affording instruction to the children of the foreign population in English, and it is now proposed to give the town of Johannesburg a municipal council, which would remove one of the most legitimate causes of discontent on the part of the Uitlanders. Moreover, the labor situation has been greatly ameliorated both by legislation and natural causes. In fact, native labor is described as superabundant, owing partly to the interference with agriculture, caused by the rinderpest, and the government has at last taken steps to pass a bill abolishing the sale of intoxicants to natives. Depending as the Transvaal gold-mining industry does so largely upon native labor, the case with which the "boys," as the Kaffir workmen are called, could be demoralized by drink has been a serious drawback to the prosperity of the mines.

Under these circumstances it is worthy of note that an increase in the output has already declared itself. In the month of July the Rand mines made a new record. Their aggregate output for the month reached the enormous total of 203,873 ounces of gold, which exceeds by 300 ounces the largest previous monthly return made in August, 1895, when the aggregate was 203,500 ounces. As compared with June the increase for July was over 10,000 ounces, and in contrast with July, 1895, the gain is no less than 4,400 ounces. The London financial papers present the following tabulation of monthly returns for four years, taken from the official figures of the Johannesburg Chamber of Mines:

	Ounces			
	1896.	1895.	1894.	1893.
January	148,178	177,463	149,814	108,374
February	167,018	169,295	151,870	93,252
March	173,952	184,945	165,372	111,474
April	176,707	186,323	168,745	112,053
May	[illegible]	194,580	169,773	116,911
June	[illegible]	205,041	168,162	122,907
July	203,873	[illegible]	167,953	126,166
August	.....	203,573	174,977	136,669
September	.....	194,704	176,707	129,585
October	.....	192,052	173,318	136,682
November	.....	165,218	175,304	138,640
December	.....	178,428	182,104	140,357
Totals	1,258,176	2,277,035	2,024,159	1,478,473

It will be noticed that the output for the seven months of the present year that have already elapsed is some 60,000 ounces less than for the same months last year, but in view of the very substantial character of the recovery in the last few months, it is not improbable that the record for the whole year will be little, if anything, below that of 1895. It is also to be remarked that the principal increase is from one of the deep-level mines, the Geldenhuis Deep, which is among the enterprises that strike the main reef at a very low level. Others of the same class are now about to become productive, and the prospects are that the Johannesburg fields will atone for their inactivity during the early portion of the year by becoming larger producers than ever.

INCREASING BRITISH FOREIGN TRADE.

The radical improvement in British foreign trade of late months as contrasted with like periods in recent years is significant at this time, when the ears of voters are being filled with all sorts of assertions regarding the bad effects on the trade of a nation of this or another standard of value.

The London *Statist* says: "To show the expansion in our trade in July compared with corresponding periods of 1895 and 1894, we contrast below the total exports and imports for the six months to June 30, and of July, of the past three years, showing the expansion in 1896 compared with 1894:

				1896 *compared with* 1894.
Exports.	1896.	1895.	1894.	
6 mos.	£119,003,000	£105,[illegible]000	£106,884,000	+ £12,119,000
July	21,334,000	20,559,000	18,398,000	+ 2,936,000
7 mos.	£140,337,000	£126,677,000	£125,282,000	+ £15,055,000
Imports.				
6 mos.	£216,481,000	£203,663,000	£211,005,000	+ £5,476,000
July	34,383,000	35,128,000	31,835,000	+ 2,548,000
7 mos.	£250,864,000	£238,791,000	£242,840,000	+ £7,924,000

"Considering that in July the disturbance of business in the United States caused a decline in our shipments to that country of £532,000, the further increase shown is very encouraging. The value of our exports to the United States in July amounted to only £1,220,000, in contrast with £1,753,000 in July last year. The worsted trade has especially suffered, the value of worsted tissues shipped to that country for the month having been only £174,000, as against £455,000 in July last year."

Improvement in British trade not only with foreign countries but with British colonies has, with a few exceptions, been notable during the current calendar year. Exceptions are the United States, Turkey, Italy, Spain, Chili and Austria, and the London journal named regards it not surprising that trade with those countries has not expanded. It says:

"The United States is still struggling with its currency difficulty. Distrust has been steadily increasing, and severe economies have been the order of the day. Our shipments to that country for the six months to June 30 have consequently declined in value by £2,250,000, the value of our shipments thither having been only £11,250,000, as against £13,500,000 in the

first half of 1895. The disturbed condition of Turkey, and the peril of Armenians, who conduct the greater portion of Turkish trade, is accountable for the severe shrinkage of nearly 28 per cent., or £800,000, shown in our shipments to Turkey. The struggle between Spain and Cuba and the unfortunate condition of Spanish finances have caused a decline in our exports to that country of £231,000, or about 10 per cent. for the half year. Chili has reduced her purchases by £127,000, and Austria by £80,000.

"With these few exceptions, our export trade with almost every country in the world has shown great improvement. India and the adjacent colonies of Ceylon and the Straits have increased their purchases of British goods by nearly £3,000,000, or 22 per cent., the large Indian cotton crop, added to the great development of railway building, having beneficially affected exchange, and induced increased shipments of goods to that country. The recovery of some degree of confidence in Australia and the activity in gold mining in Western Australia have brought about an increase in our exports to Australasia of £2,630,000, equal to no less than 34 per cent. The mining activity in South Africa, although it has been less than it probably would have been but for the Jameson raid, has caused the large expansion of nearly £2,000,000, or about 45 per cent., in our shipments to the Cape and Natal. Favorable crops in Argentina and the rapid development of that country has brought about an expansion of over £1,000,000, or 54 per cent., in our shipments to that country. China has purchased £1,000,000 more in the six months than it did last year in the same period. Japan, apart from her inquiry for war ships, which do not figure in the trade returns, has increased her purchases for the half year by £844,000, or 40 per cent. The continent has also been buying British goods freely, German purchases having increased no less than £2,100,000, Dutch by nearly £600,000, Belgian by £300,000 and French by approximately £500,000.

"Had it not been for the trouble in the United States the expansion in our purchases would, therefore, have been extremely large. It is to be feared that United States purchases will continue very small until the election, and in the event of the success of the silver party are likely to be reduced to a minimum. On the other hand, stocks in the United States must be getting very low, and should the sound-money people be successful we are likely to experience very large orders for goods."

With respect to American exports, it is added that "the depression in the United States has caused that country to greatly increase its shipments of produce, and our (British) purchases of United States produce and raw materials have exceeded those of last year by nearly £5,000,000. Our total purchases from the United States for the half year amount to nearly £52,000,000, or over 25 per cent. of our total imports. We also bought freely from France in the first quarter of the year. Our purchases from Australia have been small, and have declined for the six months by £2,500,000, owing to the failure of the Australian harvest and the shortness of their wool shipments."

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

Some information of interest regarding the efforts made by the Treasury Department to force the silver dollar into circulation is given in recent Washington advices. A department official with whom an interview has been had is quoted as saying that the department has treated these coins more generously than any other form of money ever issued by the government, and has offered unusual inducements for their use in business transactions, but that experience has shown that, except in special cases, the people will never take the "dollar of our daddies" when they can get its paper representative or other currency equally as good. The total standard silver dollars coined up to the 1st instant number 431,852,041. Of this number 379,852,244 are lying idle in the vaults of the Treasury and 51,999,797 are in circulation, being less than one-seventh of the coinage. The largest amount of these dollars ever in actual circulation was 67,547,023, in December, 1890. During the past ten years their circulation has varied between 60,000,000 and 50,000,000, and has never fallen below the latter figure. To maintain this circulation the government pays all express charges of transportation on all the silver dollars it sends out. There is no other kind of money that is similarly shipped to individuals at the entire expense of the government, with the insignificant exception of nickels and cents when forwarded direct from the mints. The amount of silver dollars shipped each year varies from 25,000,000 to 30,000,000, at a cost to the government of about $50,000 a year. This expense is criticised by some as a tax upon the people at large for the benefit mainly of bankers, who, when they need money of small denominations in the movement of the crops or other large trade operations, call on the Treasury Department for silver dollars in order to avoid the express charges that would accrue on the shipments of other kinds of money. It is also asserted that some bankers also get the dollars in large amounts in order to use them in meeting their bills. Even this practice does not suffice to keep the silver in the hands of the people, however, and it soon gets back into the Treasury in exchange for the more convenient paper currency.

In its issue this week *American Agriculturist* presents the result of its investigation regarding the apple crop in the United States and Canada. The crop is unevenly distributed in a general way, conditions of last year being reversed. Where there was a large crop in 1895 there is this year but a small yield, while the districts of failure last year have this season an abundant crop. All indications now point to a total crop probably somewhat larger than that of last year. The crop last year was largely in the west and south, where summer and fall fruit is mainly grown and where facilities for taking care of the winter fruit are poor. On that account much was wasted, rotted in orchards, was fed to hogs, and went to the cider mill, so that the commercial supply was by no means in keeping with the large aggregate product. This year the heavy crop is in the north and east, where orcharding is conducted on business principles, and where there is every disposition and facility to take care of the fruit. On this account, even if the total production be no larger than last year, the resulting commercial supply of apples will be considerably larger. The present returns show a nearly perfect prospect in New England, a full crop in apple districts of New York, unusually good in northern Ohio, but varying in the central and southern portions of that state. Reports from Michigan indicate never a larger crop or better quality, the same being true to a less degree of Ontario. The Indiana crop is spotted and short; Illinois irregular; a rather poor outlook in Iowa; Missouri trees resting, and the Kansas crop smaller. The shortage abroad is serious and there will be a heavy export demand, but it is still impossible to forecast prices. It seems wise on general principles to work off fall varieties freely whenever there is a fair prospect for winter apples.

While Mr. McKinley devotes the leading part of his letter to the discussion of the currency question, he does not omit to discuss other questions. As might be expected, he gives considerable space to the advocacy of the protective system with which his name has been prominently identified. A change in our present tariff legislation is, he insists, necessary, not only in the interest of the Treasury, but also of business. The declaration in the Republican platform favoring reciprocity is vigorously commended, as is that touching foreign immigration. Mr. McKinley favors such extension of the laws as will secure the United States from invasion by the debased and criminal classes of the old world. While, he says, we adhere to the public policy under which our country has received great bodies of honest, industrious citizens, who have added to the wealth, progress and power of the country, and while we welcome to our shores the well-disposed and industrious immigrant, who contributes by his energy and intelligence to the cause of free government, we want no immigrants who do not seek our shores to become citizens. We should, he urges, permit none to participate in the advantages of our civilization who do not sympathize with our aims and form of government, and should receive none who come to make war upon our institutions and profit by public disquiet and turmoil. Against all such our gates must be tightly closed. The policy of discriminating duties in favor of American shipping is advocated, and the maintenance of the civil service reform laws is insisted upon. The concluding paragraphs of the letter contain a strong plea for the elimination of all sectional spirit, to all influences making for the removal of which the candidate pledges himself in the strongest terms.

The Costa Rica consul at Philadelphia announces that on August 12 the government named abolished its tobacco monopoly. Hereafter it will allow free cultivation of tobacco throughout the entire republic. Press dispatches add that this opens a new market to American manufacturers for agricultural implements and tobacco machinery, and a new field for American enterprise in tobacco growing. The cessation of this monopoly opens also a valuable source of supplies to the American tobacco manufacturers, because the conditions and qualities of soil and climate of a large part of Costa Rica are such that there can be raised a fine quality of tobacco equal to any now raised in Cuba. It is also of interest to know that in order to foster tobacco planting, banana raising, and the cultivation of cocoa, coffee and sugar, the government of Costa Rica decided July 28 to spend $50,000 every year in increasing desirable immigration. The introduction of labor is left to private initiative.

CURRENT BUSINESS NEWS.

Industrial.

One thousand miners at Shawnee, Ohio, working under the lease system, have struck.

Low prices for iron and steel have brought to us "considerable export business and notably from new sources, Japan and Russia figuring as purchasers almost for the first time. The total exports of iron and steel products and machinery for the fiscal year ending June 30, 1896, amounted to $41,000,000, as against $32,000,000 in the corresponding period in 1895, a gain of 28 per cent. It is fortunate for American manufacturers of machinery that in a year falling short of expectations in home trade they have been able to make such creditable gains in foreign business. In another year it is expected that the initial work of the National Association of Manufacturers, in sending abroad delegations of manufacturers to cultivate better relations with other countries, will show still more encouraging results."

At a recent meeting of the Kanawha valley coal operators in Charleston, W. Va., it was decided to notify the miners that beginning September 1 the rate would be 2c. a bushel, a cut of one-half cent.

The Philadelphia *Ledger* says of the iron market: "Here and there a manufacturing plant has resumed, but in the case of blast furnaces they are not likely to restart until there are larger reductions in stocks on hand and prices are on a better footing. In the absence of large contracts business is of a general miscellaneous character, and ranges from 50 to 75 per cent. of that doing in the first half of the year."

The increase of profit to the producers of coal and an increase of economy to the consumers of coal is coming from the employment of the rice coal, the buckwheat coal and the pea coal (so called from the varying size), which in former times were simply thrown out in heaps as useless, and which the miner merely desired to get rid of. A writer in the *Engineering Magazine*, New York, after going over the matter very thoroughly, says: "There are fortunes in these old dumps, and they will no more be used for filling until they have been thoroughly reworked."

Thirty six cotton mills in Fall River, Mass., out of a total of eighty-one, were to shut down this week.

Over 1,800 knee pants makers went on strike in New York this week. A committee was appointed to draw up a new agreement, which the contractors were to be asked to sign.

The sale of Alabama pig iron in Europe promises to develop a new and important branch of business for the Birmingham, Ala., producing region. The Tennessee Coal, Iron & Railroad Company has just shipped 500 tons to Liverpool and 300 to Genoa, Italy, and has orders for more, with inquiries to this and other companies here, which indicate a growing demand for the Alabama product beyond the sea. "Tests by European experts on sample shipments made some months ago proved satisfactory."

"The Bryanites are telling the farmers that free silver would make wheat sell for a dollar a bushel, but they are not telling the workingman that dollar wheat would double the present price of flour."

"In Argentina a skilled workman now gets $60 a month where he got $40 before the depreciation of the currency, but the money in which he is paid has fallen 66 per cent., which means a net loss to him of 16 per cent. The same object lesson is presented in Colombia, where wages have increased 50 per cent. and the prices of food and clothing have advanced 180 per cent. These recent examples of the effect of cheap money on the interests of wage earners should be carefully studied by the laborers of the United States, whose votes are being solicited for free silver."

Instead of giving battle to the Amalgamated Association on the wage question, as announced by the manager, who made extensive preparations last week, the American Tinplate Company of Ellwood, Ind., yesterday signed the scale, and will resume operations immediately with the old hands. The plant is probably the largest in the United States, and employs several hundred hands.

The Tinplate Manufacturers' Association, which was made up of all the tinplate manufacturers in the country, except concerns in the remote districts, has been dissolved. The withdrawal recently of the American Tinplate Company of Ellwood, Ind., and its fight with the Amalgamated Association, which ended in defeat, are among the causes of the break.

The Illinois Steel Company's plant, at Hammond, Ind., has shut down for an indefinite period. Three hundred men are thrown out of employment.

Philadelphia carpet mills employing nearly 1,000 persons have shut down, "the owners blaming the silver agitation largely for the business depression which renders such a course necessary."

Commercial.

The Chattanooga *Tradesman* says: "Judging from the bank clearings, the south is more prosperous than any other section of the country, and it is a notable fact that this has always been true in seasons of depression."

The town of Otonagon, Mich., was destroyed by fire this week, only twelve dwellings remaining standing. Fifteen hundred people are homeless. The loss is estimated at several million dollars. The plant of the Diamond Match Company was swept away.

A report received at the Department of State from Consul William D. Warner, at Cologne, shows that Americans are underselling the Germans in barbed wire and wire nails in Japan. Hamburg importing houses are forced to buy the American wire because their customers have begun to purchase it directly from the United States. American competition, though felt elsewhere, has been specially noticeable in Japan.

A farmers', merchants' and manufacturers' exchange will shortly be established in Pittsburgh. Its object will be to bring the consumer in contact with the producer with the least exertion or loss of time, and "to dispense with the services of the middleman."

There is little improvement south in the demand for cotton and woolen goods, but new mills and enlargements are still reported, and faith in the success of the cotton manufacturing business in the south is said to be by no means diminished.

The French government is perfecting the details for the international exposition to be held in Paris in 1900, commemorating the birth of the century, and has asked the Washington State Department for the name of the commissioner-general who will represent the United States. To this Acting Secretary Rockhill has replied that the commissioner-general has not been named, as Congress took no steps at its recent session to provide for American representation at the exposition. He expressed the belief, however, that the approaching session of Congress will bring about an acceptance of the invitation of the French republic.

The St. Louis *Globe-Democrat* says: "England, France and Germany are paying expenses comfortably. Their trade is in excellent shape and growing. They are gold countries and have no idea of tampering with the standard. To run away from this company to associate with China and Argentina could be explained by nothing except the fact that a wave of insanity had swept across North America."

The *Journal of Commerce* says there has not for some years been as much activity in the market for ocean grain freights as has existed during the last few days.

Cash corn on the St. Louis 'Change this week reached 19½c. a bushel, the lowest price known in the history of the St. Louis market.

The *American Agriculturist* reports that the Pacific coast will have this season only about half as many hops as last year. In New York state the crop will be fully one-third less. In England the reduction is estimated at 20 to 33 per cent. of the 1895 crop. Should these conditions be verified by the harvest, it means that the 1896 crop in these sections will be between 125,000 and 250,000 bales less than last year. "The crop in Europe promises to be less than last year also. Prospects at this writing certainly warrant the belief that the heavy reduction in the 1896 product will go far toward compensating for the large surplus of old hops now in hands of dealers and buyers."

The manager of the Manchester Ship Canal will, it is announced, visit Philadelphia in the interests of a steamship line between American ports and Manchester.

An advance of 25c. per ton in gross f. o. b. tidewater anthracite prices is general in New York and Philadelphia. The Lackawanna has already established the new circular, and others will do so September 1. Production for September has not been estimated as yet, but it is believed that the market requirements will range between 4,000,000 and 4,250,000. Western prices have not yet been acted upon. The demand for anthracite is light, but the new circular, which will be strictly observed on orders after September 1, will, it is believed, stimulate an active inquiry.

Financial.

The following securities were sold at auction this week at New York:

300 Shares The Western Brewery Co., of Belleville, Ill., common, $100 each (hypothecated)	12@14%
25 Shares of capital stock, par $100, Columbia Granite Construction and Manufacturing Co., of Columbia, S. C	5%

During the past three weeks the loss of gold at San Francisco by the redemption of legal tenders has aggregated $3,500,000, but it is believed the movement there has nearly spent its force.

Mr. Bryan says that "any purchaser who stands ready to take the entire supply of any given article at a certain price can prevent that article from falling below that price. So the government can fix a price for gold and silver by creating a demand greater than the supply." The United States has had some experience in this. The Sherman law provided a spot market for the major portion of the production of silver of this country at market quotations when the silver was sold. The government purchased in all 168,000,000 ounces under the law, and the price fell from $1.21 to 70 cents per ounce during the operation.

The New York *Tribune* says: "All the large companies in this city dealing in mortgages on improved real estate are shutting down on the business as much as possible. Some of them, when asked about the situation, reply that they are not exacting the gold clause, and that they have made no change in their method of doing business. Now and then a president of a company, or some other officer in the president's absence, will admit that the company has all the mortgages to handle that it wants, and prefers to have no more under the present conditions."

The following shows the condition of the national banks of this country at the close of business on July 14:

	1896.	1895.
Number of banks	3,689	3,715
Capital	$651,144,855	$658,224,180
Surplus	331,851,632	247,782,176
Deposits	1,683,217,833	1,749,189,341
Loans	1,971,642,012	2,016,639,536
Cash held	344,213,739	382,942,366

The London *Westminster Gazette* publishes a letter "urging the English money-lenders to declare a substantial reduction of the present rates of interest for the benefit of the American farmers."

The Washington *Post* says: "The simple truth of the matter is that the cause of sound money is in great jeopardy because of the conceit, the complacency and the ignorance of its eastern advocates."

Railroads.

The all-rail east-bound shipments of dead freight from Chicago last week were 58,505 tons, against 51,017 tons the previous week and 48,653 tons the corresponding week of the previous year.

The Buffalo, Rochester & Pittsburgh Railroad Company reports for year ended June 30:

	1896.	1895.	Changes.
Gross earnings	$3,024,072	$2,901,272	Inc. $122,800
Operating expenses	2,120,161	2,082,723	Inc. 37,438
Net earnings	$903,911	$818,549	Inc. $85,362
Other income	27,889	37,203	Dec. 314
Totals	$941,800	$856,752	Inc. $85,048
Fixed charges	824,155	814,083	Inc. 10,072
Surplus	$117,645	$42,669	Inc. $74,976
Total surplus	185,427	67,872	Inc. 117,555

The United States Circuit Court at Indianapolis, on Monday, appointed William H. McDoel receiver of the Louisville, New Albany & Chicago Railway Company, upon the application of John T. Mills, Jr., of New York city. Mr. McDoel is the general manager of the system.

Several of the big railroads leading out of New York "have issued notices ordering retrenchments. This is chiefly due to the falling off in freight, owing to the uncertainties of the business situation. Officials say that shippers seem to be limiting themselves to the necessities of the next three months, and are apparently awaiting the outcome of the election."

The board of directors of the Delaware & Hudson Canal Company have declared a regular quarterly dividend of 1¾ per cent., which is payable September 15.

A regular quarterly dividend of 2 per cent. has been declared on Boston & Albany Railroad Company, payable September 30.

Mr. E. D. Adams is to be chairman of the Board of Finance of the Northern Pacific Railroad. This selection will give great and general satisfaction. Other principal officers of the company will be Edwin Winter, president, St. Paul; Charles F. Coaney, secretary, New York; Albert E. Little, treasurer, New York; John Scott, comptroller, St. Paul; J.W. Kendrick, general manager, St. Paul; J. M. Hanniford, general traffic manager, St. Paul. General Manager Kendrick has appointed his full list of subordinates, who are the same as before the receivership.

Further reductions in freight rates between Chicago and St. Paul have been made to meet the cut of the Lake Michigan Car Ferry transportation route.

Employees of the Missouri, Kansas & Texas Railway system engaged in its train service, with the exception of locomotive engineers, have united under one federation, and will hereafter act together in all matters affecting their common interests.

The Delaware, Lackawanna & Western Railroad Company's system in this state reports for year ending June 30:

	1896.	1895.	Changes.
Gross earnings	$8,827,547	$8,345,044	Inc. $482,503
Operating expenses	4,117,625	3,994,825	Inc. 122,200
Net earnings	$4,710,822	$4,350,219	Inc. $360,603
Fixed charges	2,414,824	2,403,453	Dec. 48,029
Surplus	$2,295,998	$1,886,766	Inc. $409,232

The Syracuse, Binghamton & New York reports for year ended June 30:

	1896.	1895.	Changes.
Gross earnings	$896,503	$891,087	Inc. $5,506
Operating expenses	526,974	499,281	Inc 27,993
Net earnings	$369,619	$391,806	Dec. $22,187
Fixed charges	187,372	179,771	Inc. 7,601
Surplus	$182,247	$212,035	Dec $29,788
Payments for inc	200,000	200,000	....
Deficit	$17,753	*$12,035	Inc. $29,788
Total surplus	324,474	342,226	Dec. 17,752

* Surplus.

The Lehigh Valley Railroad lines in New York state report for the quarter ended June 30:

	1896.	1895.	Changes.
Gross earnings	$1,262,659	$1,115,864	Inc. $146,795
Operating expenses	902,775	845,047	Inc. 57,728
Net earnings	$359,884	$270,817	Inc. $89,067
Charges	259,109	181,724	Inc. 77,385
Surplus	$100,775	$89,093	Inc. $11,682

The following railroads report gross and net earnings for July:

	Gross earnings— 1896.	1895.	Net earnings— 1896.	1895.

Miscellaneous.

Great damage has been done by forest fires in northern Michigan and Wisconsin.

"Populism in 1783-1787" is the title of an article by Worthington Chauncey Ford, to be published in *Harper's Weekly*, September 5. Mr. Ford will show that "there is little novelty in the principles underlying the Populist platform adopted at Chicago. Wherever a large number of persons have been unwise in their business ventures, unfortunate in their undertakings, or bitten by the gambling or speculative fever, and have carried their operations so far as to exhaust their credit and incur debt, their populism will be rampant. A century ago such a faction had acquired sufficient strength to bring the wheels of government to a stand, to defy authority in open rebellion, and to threaten the very existence of the American people as a potential power among nations."

Foreign.

The *Schumarkt*, the organ of the German shoemakers, calls attention to the report forwarded to the State Department of his government by Mr. F. H. Mason, United States consul-general at Frankfort-on-the-Main, and denies that a single American shoe store exists in Berlin. The paper says that Mr. Mason, in making the statement that such stores did exist, was wrongly informed. "No market exists in Germany for American boots and shoes," the paper adds, "for many reasons. German machinery for the manufacture of boots and shoes is as perfect as the American machinery, and the shapes worn in America would not do here."

At a meeting of the Scotch oil traders held August 26 it was decided to adhere strictly to the existing agreement with the Standard Oil Company.

The Hamburg *Correspondent*, a semi-official organ, demands that energetic steps be at once taken "to protect German interests in Samoa against the encroachments of American adventurers." The paper asserts that Americans are actively seizing the trade in Samoa, ignoring the international arrangements entirely. The *Freisinnige Zeitung*, replying to this article, says that Samoa is not worth quarreling over with the United States and England.

The effect of the Anglo-Sicilian Sulphur Trust, which has been formed by Italian, French and English capitalists, with a capital stock of £1,000,000, has already been felt in the New York market. "There has been a rise in prices, and the refiners have begun to cut the discounts which they allow the jobbers. One of the largest sulphur refining firms in the country has been obliged to pay an advance of about $4 a ton on goods lately bought. A man connected with the firm said yesterday: 'The producers are selling their brimstone to the capitalists at about $16 a ton now, and the trust sends it here through Sicilian commission merchants, the freight and export duty bringing it up to about $20 a ton. We do not call that a high price.'"

RECENT LEGAL DECISIONS.

[Prepared expressly for BRADSTREET'S.]

Note—Negotiability—Corporate Seal.

The New York Court of Appeals held, in the recent case of The Chase National Bank of the City of New York vs. Faurot, that the commercial paper of a corporation, negotiable in its form, does not lose the quality of negotiability by having attached thereto the corporate seal, and that the indorser of a promissory note cannot avail himself of his agent's mistake and the bad faith of the payee in the transaction, inducing its delivery to defeat the note in the hands of a bona fide holder.

Homestead—Agricultural Purposes.

The Supreme Court of Minnesota held, in the recent case of Kiewert vs. Anderson et al., that homestead interests are favored by the constitution and statutes; that laws applicable thereto should receive a liberal construction; that a homestead right once acquired is a valuable one, and an act of the legislature extending the limits of a city so as to include the homestead, while it retains all its characteristics as such, will not operate to reduce or diminish the rights of the owner of the homestead therein unless the land surrounding it has become urban in its character, and that where the homestead situated within an incorporated city is used for agricultural purposes and surrounded wholly or partly by laid out and platted lands, rural in character, this does not affect its homestead character so long as the homestead land itself is not laid out and platted.

Bicycle—Vehicle—Negligence.

The Supreme Court of Michigan held, in the recent case of Myers vs. Hinds, reported in the Detroit *Legal News*, that in an action to recover for injuries caused by the alleged negligence of a bicycle rider, it was error for the court to instruct the jury that the defendant was not guilty of negligence, the collision being caused by his running over an obstacle, the only evidence on this point being the statement of the defendant, made just after the accident, and the testimony of a witness that she thought he struck something, the thought being based only upon the noise she heard; that a bicycle rider cannot be relieved from liability under such a state of facts unless the obstruction was one he could not see and avoid by the exercise of due care, and that when one upon a bicycle comes up behind another, who is unconscious of his approach and is walking where he has a right to walk, gives no warning, and strikes him with his vehicle, these circumstances unexplained tend to show negligence.

Corporation—Account—Assignment.

The Supreme Court of Georgia held, in the recent case of Telford vs. Oslin, that where a corporation assigned to its president accounts due to it by various persons, the proceeds of the same to be used in paying existing debts of the corporation, and the president, in consideration of an extension of the time granted to the corporation by the creditors holding these debts, undertook the collection of these accounts for their use, and in writing guaranteed payment of the same within a specified time to such creditors or their attorney, he became absolutely liable for the payment of the gross sum to which the accounts amounted, and he could not set up as a defense to an action upon his contract that the accounts were, for any reason, valueless, or that the corporation did not really owe them (or some portion of them) when assigned to him, or that these things were true when he made the guarantee mentioned. The court said that his liability rested upon his contract of guarantee, supported by the consideration of an extension of time granted to the corporation at his request, and did not depend upon the solvency or insolvency of the accounts the payment of which he guaranteed.

Note—Speculation—Margins—Futures.

The Supreme Court of Georgia held, in the recent case of Benson vs. Dublin Warehouse Company, that where a promissory note is executed by one person, and another, who is not the payee and whose indorsement is neither essential nor proper to the transmission of title to the note, signs his name upon the back of it, he becomes liable thereon either as joint principal or as surety, but does not by thus signing his name enter into such a contract of indorsement as will cut him off from setting up against the payee the defense that the note was founded upon an illegal consideration, and, therefore, void; that a promissory note given for money which had been advanced by the payee to the maker to be used "as margins in speculating in cotton futures," and which the lender had, in the maker's behalf, in fact "placed" for this purpose, is void, and its payment cannot, either as against the principal or a surety thereon, be enforced by suit, and that borrowing money to be used in speculating in "cotton futures" is not within the scope of a legitimate partnership business, and that, therefore, where a member of a partnership, without the knowledge of a copartner, borrows money in the partnership name and uses it for this purpose, and such copartner, in ignorance of the truth, joins the other in executing to the lender a promissory note for such money, honestly believing at the time that the note is being given in settlement of a lawful partnership debt, he is not liable on such note to the lender, if it be shown that the latter took the same with full knowledge of all the facts.

Railroads—Duty of Passengers.

The Maryland Court of Appeals made the following statement as to the duty of passengers to comply with the regulations of carriers in the case of Sharkey vs. Lake Roland Elevated Railway Company: "The responsibility of the appellee for the safe carriage of passengers is founded upon contract. The law casts on it the obligation of providing safe means of transportation and the employment of skillful agents, and while it is responsible for the consequences of any failure or omission in this respect, as well as for the negligence of its agents, there is also imposed on the passengers the duty to obey the reasonable regulations of the company in entering, occupying and leaving its cars, and nothing less than some existing necessity, beyond his control, can justify a passenger in a breach of his contract and render the company liable for injuries received in consequence of a known violation of such regulations. * * * And this court has uniformly held that, in such case, the question of negligence on the part of the passenger is a legal question for the court to decide. * * * In this case the undisputed evidence shows that Sharkey had frequently ridden on this car, that the warning against jumping off the car whilst in motion was conspicuously posted, and that by the exercise of reasonable care he could have known what was necessary for his own safety. The accident was the direct result of his infraction of the rules of the company, made for the safety and protection of those who traveled in its cars. There was suitable and sufficient provision made within the cars for all the passengers. There was ample room to have turned around inside the car and attract the attention of the conductor, either sitting or standing, but instead of availing himself of this means he voluntarily and without occasion therefor took an exposed position, placing one foot outside, and, with his body beyond the car-line, attempted to alight from a rapidly moving car, with his back to the poles, which he knew were there."

Explosion—Mining—Liability.

In the recent case of Clarkin et al. vs. The Biwabik-Bessemer Company et al., recently decided by the Supreme Court of Minnesota, it appeared that certain contractors erected a boarding camp upon mining property, where they were engaged in mining under contract with the owners of the property, and by permission of the contractors, plaintiffs occupied the camp and boarded the contractors' workmen. Subsequently the contractors abandoned the contract and premises, and plaintiffs intended and attempted to remove from the camp with their property used therein, but were delayed by reason of the severity of the weather, dangerous sickness of a member of their family, and financial inability in obtaining another place. The defendant company resumed possession of the mining property and stored a large amount of dynamite in a building thereon, situate within thirty-three feet of the boarding camp, and about three weeks thereafter this dynamite, while being heated by defendants, exploded, damaging plaintiffs' personal property situate in the boarding camp. Prior to the explosion defendants notified plaintiffs that if they remained in the boarding camp they would do so at their own risk, but gave them no notice to remove from the camp and took no legal steps to compel them to do so. The defendants stored the dynamite in the building about three weeks before the explosion and while the camp was still occupied by the plaintiffs. The court held that under the facts in the case the plaintiffs remained in possession of the boarding camp as bare licensees; that the question of whether they had reasonable opportunity to remove from the boarding camp with their property before the time of the explosion was a question for the jury, and that while the plaintiffs were in the actual possession of the boarding camp, as bare licensees, the defendants would be liable for damages to plaintiffs' property therein situate resulting from the explosion of the dynamite, if the explosion were caused by defendants' want of ordinary care and skill in its management, although in their lawful possession at the time.

BUSINESS NOTES.

Internal Revenue.

The internal revenue statement for July shows the total receipts for that month to have been $14,258,682, as compared with $13,579,666 for July, 1895. The receipts for July, 1896, and the increases and decreases as compared with July last year are given as follows: Spirits, $7,751,456, increase $644,698; tobacco, $2,458,443, decrease $163,232; fermented liquor, $3,890,347, increase $222,561; oleomargarine, $128,250, decrease $27,697; miscellaneous, $30,183, increase $3,227. The principal increase for the month is from wholesalers, showing a gain of $820,132. The receipts from retail liquor dealers' licenses fell off $173,216, and from manufactured tobacco $156,658.

An American's Plans Adopted in Egypt.

According to a recent article in the New York *Herald*, "the Egyptian government will shortly proceed to excavate the Raiyan Canal on plans proposed by Mr. Cope Whitehouse, of New York city. The Raiyan Canal is to be 10 miles long, and will connect the Nile river with a tract of 250 square miles of land a few miles southeast of Cairo and 120 feet below the level of the Nile. By draining the surplus flood waters of the Nile into this tract it is estimated that crops worth $70,000,000 can be raised on what is now a desert, and that better control will be given of the Nile floods with favorable effects on the sanitary conditions of the Lower Nile. Mr. Whitehouse discovered this tract while traveling in Egypt, and having bought the tract has had plans for its development before the Egyptian authorities since 1891. It is estimated that the canal will cost $3,000,000."

Emigration to Brazil.

The London *Times* says: "It is announced that the Prussian rescript dated November 3, 1859, forbidding the promotion of emigration to the three southern provinces of Brazil—Rio Grande do Sul, Santa Catharina and Parana—has been withdrawn. Towards the end of the first half of the present century many German families emigrated to Brazil in the hope of finding remunerative employment on the coffee plantations. Many of the immigrants fell victims to the climate and still more were ill-treated by their employers, until finally the above-mentioned rescript, generally known as the Lex von der Heydt, was promulgated to prevent further mishap. In time, however, some of the earlier immigrants succeeded in founding prosperous German settlements, and it is to be expected that these will now acquire considerable extension. The incident is noteworthy in view of the policy of expansion which at the present time finds favor in colonial circles in Germany."

Government Bond Earnings.

The Philadelphia *Press* says: "The profits of holders of bonds of the United States have not been large during the last ten years. They have not only seen the value of their bonds depreciate in a marked way, but in no case have the bonds even brought in full 3 per cent. interest per annum on their average market price. A Boston bank recently made up the following table showing the average yearly interest or earning capacity of the various forms of government bonds:

Year.	4½s.	4s 1907.	5s.	4s 1925.
1885	2.5395%	2.6385%	....	....
1886	2.1025%	2.4400%	....	....
1887	2.4970%	2.3052%	....	....
1888	2.1637%	2.2995%	....	....
1889	1.3900%	2.1392%	....	....
1890	1.5955%	2.3467%	....	....
1891	2.5860%	2.5530%	....	....
1892	....	2.7127%	....	....
1893	....	2.9540%	....	....
1894	....	2.7250%	2.1285%	....
1895	....	2.7875%	2.9807%	2.8995%

HIGHEST AVERAGE EARNING CAPACITY.

Year.	4½s.	4s 1907.	5s.	4s 1925.
1891	2.5360%	....	....	....
1893	....	2.9540%	....	....

1889	1.3900%	....	....	....
1889	....	2.1392%	....	....
1894	....	....	2.1285%	....

Privileges of Foreign Ships.

On the suggestion of the government of Norway and Sweden, the State Department is looking into the treaty rights of foreign nations to have their merchant ships enjoy certain privileges which the American laws give to American ships. The French government is also interested in the question, and its determination would apply to the extensive merchant marine service of Great Britain and Germany with the United States. The question has arisen in connection with a comparatively minor law passed by the last Congress, which provided that small packages imported to the country by vessels of the United States should be expedited in their shipment across the country by not having to go into a bonded warehouse at the port of arrival. It applies to presents and small personal packages sent from abroad, and not to the bulk of merchandise. Secretary Carlisle has proceeded to execute the law, although the intimation has been made that he would suspend the law because it was in conflict with treaty rights. Treasury officials take the ground, however, that questions of treaties are not for them to decide, and that their only duty is to enforce the law as they find it. They have received a letter from the State Department calling attention to the desire of the foreign governments to be included in the privileges of the law, to which the Treasury has replied that the law gives no authority to extend the privilege beyond ships of the United States. This leaves the question to be determined by the State Department, where the navigation and shipping provisions of various treaties with foreign countries are being looked into.

Cider Manufacture in Germany.

The London *Times* says: "The British consul-general at Frankfurt in his last report refers to the production of cider in Germany. The manufacture is for the most part carried on by inn-keepers, and in a very primitive way. The apples are thoroughly washed, then mashed in small hand mills and left to ferment for a short time, after which they are pressed. For private consumption the cake is then mixed again with water and again pressed. This cider, as a rule, remains cloudy, and has a milky, yellowish color. It is much consumed in small villages and as a home drink by the peasants. In the large factories, of which Frankfurt is the center, a full, clear cider suitable for export is produced, and the export has of late years increased a good deal. The Frankfurt manufacturers have secured markets abroad in Africa, South America, China and Japan."

Exports of Iron and Steel Products.

The tabulation below indicates in what directions the gains in "iron and steel and manufactures of" have been most conspicuous:

AMOUNT AND VALUE OF IRON AND STEEL EXPORTS FROM UNITED STATES IN FISCAL YEARS ENDING JUNE 30, 1896 AND 1895.

	—Gross tons—		—Values—	
	1896.	1895.	1896.	1895.

The Port of New York.

The New York correspondent of the Philadelphia *Ledger* writes: "The Produce Exchange to-day made public the complaint it has made to the Interstate Commerce Commission against the Railway Traffic Association and all the companies comprising it. The complaint states that the advantages of New York's position are sufficient under equal conditions to draw to its port by far the greater part of the export trade of the United States. It claims that it is unlawful for the railroads to give Philadelphia, Baltimore, Norfolk, Newport News and Boston undue preference over New York. It charges the railroads with violation of the Interstate Commerce act. The rates on grain from Chicago to New York are 20c. per 100 pounds, and from Chicago to Philadelphia 18c., and to the other places named 17c. From Buffalo to New York the rate is 11c., and from Buffalo to Philadelphia and Baltimore only 10c. It is claimed that the differential tolls are unjustifiable, and that they are greatly detrimental to the commerce of New York. Ex-Railroad Commissioner John D. Kernan and A. E. Blackmar appear as counsel for the exchange. Whether the differentials are entirely to blame for New York's loss of trade or not, it is certain that the port is losing business. This is shown not only in the statistics of grain exports but in the statistics of exchange transactions. Since May 1 24,611,000 bushels of corn, 313,192,000 bushels of wheat and 14,577,000 bushels of oats have been traded in on the Produce Exchange. In the corresponding period last year the figures were: Corn, 57,375,000; wheat, 834,108,000, and oats, 26,427,000."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

SHOWING STOCK OUTSTANDING, BONDS, MILEAGE, LAST DIVIDENDS AND TOTAL SALES, WITH RANGE OF PRICES IN 1895 AND 1896.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The volume of general business has not increased within the week. Exceptions appear to be at Baltimore, Louisville and Kansas City, which send out more favorable reports as to the quantities of general merchandise sold than any other center. Early movement of crops is said to be behind the increased orders. Another encouraging influence is found in lower rates for foreign exchange, the movement of $12,000,000 in gold from abroad to the United States, and the expression of opinion that not less than $25,000,000 in gold is to be imported in the near future.

Conspicuous among checks to trade are greatly increased firmness for money at nearly all financial centers. As at New York, banks at most larger cities report withdrawals of deposits, in many instances by country banks, higher rates for call loans, and at some points the practical refusal to make time loans. This is the outcome, primarily, of uncertainty as to the financial situation, in instances due to increased and important business embarrassments, and in some localities to larger demands for accommodation from country merchants and jobbers who have excessively large book accounts and find collections exceptionally slow. Banks are very generally meeting the needs of regular customers at former rates, either turning down or charging the higher rate to outsiders. Regular rates of discount are no higher at Pittsburgh, Baltimore, Atlanta, Louisville, Nashville, Omaha and Kansas City, but only regular patrons are being accommodated. Rates at New York, Boston, Providence, Buffalo, Chicago, St. Louis, Detroit, St. Paul, Minneapolis, Duluth and Charleston are all higher, with regular customers receiving better than published rates. The demand for funds to move cotton at the south and southwest, and wheat west and northwest, with the tying up in a speculative deal of several millions belonging to Chicago banks, intensifies the relative difficulty in securing funds.

After some hesitation and a little bearish professional maneuvering, the New York stock market has developed a strong and rather confident tone on the engagement, in all, of about $12,000,000 gold for shipment from Europe to this country. Some $1,700,000 has arrived, and the fact that most of it is to be exchanged for legal tenders at the Treasury has a good effect. Money has necessarily been firm, with great restrictions on transactions in time loans or commercial paper, while call loans have been 6 per cent. or better, with quotations as high as 15 per cent. The opinion of leading financiers is that money rates will be strong but not unduly high, and this influences covering of short contracts, although public or European buying is absent. The premium paid for "free" gold has fallen from ⅜ to ⅛ per cent. Foreign exchange has been demoralized by the offering of grain and provision bills and the absence of inquiry. Demand sterling on Friday was 4.83½@4.83¾.

Jobbers and manufacturers report no general increase in demand for staple merchandise. The tendency of the former is to let the latter carry stocks, and of the latter to cut down production until scarcity compels freer purchases by wholesalers. Trade opinion is that little gain in business need be expected until after election. Merchants in regions where cotton and new wheat are moving freely are somewhat more hopeful as to prospects.

The record of this week's business failures in the United States shows a large increase over last week, 320 compared with 264, a gain of 54. Compared with the week a year ago the increase is 130, and with two years ago the gain is 128. In the last week in August, 1893, during the panic, there were 369 failures reported, as contrasted with 320 this week.

Bank clearings totals continue to range at low levels, the aggregate for six business days ending August 27 being $748,000,000, nearly 8 per cent. less than last week, 15 per cent. less than in the fourth week of August, 1895, and only one-half of 1 per cent. larger than in the like week in 1894, when business was supposed to have touched low-water mark after the panic of 1893. Compared with the total in the week in 1893 this week shows an increase of 15 per cent.

The general tendency of prices of staples continues downward, exceptions being advances for print cloths, wheat, sugar and anthracite coal. On the other hand, lower quotations are recorded for cotton, leather, wool, pig iron, barbed wire, lumber, coffee, corn, oats and pork and lard.

Total exports of wheat, flour included as wheat, from both coasts of the United States and from Montreal this week amount to 3,281,854 bushels, against 2,991,000 bushels last week, 1,871,000 bushels in the week a year ago, 3,420,000 bushels two years ago, and 5,092,000 bushels three years ago.

There is some improvement in demand at Montreal, but the volume of trade continues light and collections are poor. Exports are more active. At Toronto, while trade prospects are said to be good, business is restricted. At Quebec city the volume of business is said to be a fair average, and crop prospects are fair. Collections are fair at Halifax, and the Nova Scotia apple and grain crops are promising. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $18,403,000, a trifle less than last week, but about 12 per cent. more than in the week a year ago.

FINANCIAL.

The Money Market.

Great irregularity has prevailed in call loans, the only department of the New York money market in which there has been any activity. The fact that the banks determined not to issue Clearing House loan certificates for the present, with the decline in exchange, and the announcement that some $12,000,000 of gold had been shipped from Europe to this country, all tended to keep up the excitement in the loan market. The banks seem to have called in many loans, while foreign houses also employed their money in buying bills of exchange, and thus reduced their accommodations in the street. The rates for call loans fluctuated between 3@15 per cent., the market being decidedly firmer on Thursday, when, however, a leading banking house broke the figure from 10 down to 6 per cent. by large offers. Virtually nothing has been doing in time loans, which are quoted at 6 per cent. plus a commission, and in commercial paper an 8 per cent. rate is no attraction to outside buyers, while the local banks are having all they can do to attend to the requirements of their own dealers. The tone of the market on Friday was decidedly easier, call money being down to 6@8 per cent., while the first receipts of gold from Europe, and the expression of an opinion by Mr. J. P. Morgan that higher rates were at an end, had a decidedly good effect.

The New York Banks.

Last Saturday's bank statement was a surprise, inasmuch as the loss in surplus reserve was only $2,127,525 and that in average cash $2,401,000. The significant features were the decrease of nearly $6,000,000 in loans and the reduction of deposits by $9,095,000. This would point to the fact that the banks had protected the reserve by calling in loans vigorously, while the detailed statement showed that there had been some shifting of balances from one institution to another. The figures compare as follows with those of the preceding week.

	Aug. 15, '96.	Aug. 22, '96.	Changes.	
Loans	$464,918,200	$458,933,500	Dec.	$5,984,700
Specie	46,863,000	46,796,600	Dec.	66,700
Legal tenders	79,385,000	77,050,700	Dec.	2,334,900
Deposits	467,393,700	458,298,600	Dec.	9,095,100
Circulation	15,789,800	16,365,800	Inc.	576,000
Total reserve	126,248,600	123,847,300	Dec.	2,401,300
Reserve required	114,848,425	114,574,050	Dec.	273,775
Surplus reserve	11,400,175	9,272,650	Dec.	2,127,525

At the corresponding period last year the surplus reserve was $37,566,675, against $66,718,650 in 1894.

The Boston Banks.

	Aug. 22, '96.	Aug. 15, '96.	Changes.	
Loans	$161,793,000	$160,840,000	Inc.	$953,000

Surplus reserve	1,556,171	1,231,743	Inc.	324,428

Silver.

There have been no features in the silver market, either here or in London, during the past week. The tone may be described as heavy, and London cables state that it was affected by offers from this side showing a desire to sell in consequence of the higher money market. Dealings in silver bullion certificates have been on a very small scale and present no features of importance.

Foreign Exchange.

The foreign exchange market was depressed from the beginning to the end of the week. There has been practically no purchasing of bills except by the houses that are importing gold, and, on the other hand, considerable pressure of bills drawn against grain, provisions and other exports has been noted. Rates have accordingly touched the lowest level since 1893, demand sterling selling down from 4.86½ to 4.83¾@4.84, and 60-day bills 4.84½ to 4.83, although very little attention was paid to long bills. Posted rates, which, at the beginning of the week, stood at 4.85@4.86½ for long and demand, underwent successive reductions, carrying them down to 4.83@4.85½, to correspond with the rapid fall in rates for actual business. The total gold engagements, so far as they were reported from last week to the close on Friday, were $12,500,000, but other amounts are believed to be on the way, while some estimates fix the total likely to come to this country in the next thirty days at $25,000,000 more. The Banks of England and France have both raised their selling price for gold bars as a precaution against a drain to this country. On

Friday the market was still weaker, long sterling declining on the advance in London discount rates.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

4.84¼	4.84	4.83¼	4.83	4.82½	4.81¾
@	@	@	@	@	@
4.84½	4.84	4.83½	4.83	4.83	4.82

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.83¾ @4.84; commercial bills, 4.81@4.81¼; francs, 5.22½ @5.20; reichsmarks, 94⅜ @94 15/16.

The Bank of England rate remains at 2 per cent. The bank lost £1,102,000 for the week ending Thursday, and has continued to lose since then, principally for shipment to this country. Discount in the London open market is firmer on this at 1@1⅛ per cent., and call money there is ½ @ ⅝ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending August 21, 1896:

	1896.	1895.
Dry goods	$2,185,705	$3,226,814
General merchandise	4,136,257	7,117,167
Totals for the week	$6,321,962	$10,343,981
Previously reported	300,720,277	331,028,545
Since January 1	$307,042,239	$341,372,526

The exports (exclusive of specie) from New York to foreign ports for the week ending August 25 were $1,214,189 below those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$6,296,299	$6,738,623
Previously reported	242,088,026	215,963,634
Since January 1	$248,384,325	$222,702,257

THE STOCK MARKETS.

The New York Stock Market.

Changes in stock market values for the past week have, on the whole, been unimportant. The speculation has been of the most strictly professional kind. Commission houses have done, to all appearances, virtually nothing, and the larger operators waited, though at the end of the week there was an appearance of covering, which could only mean that the big bears did not like the situation, and that some, at least, among the more prominent class of speculators were inclined to take the bull side of the market for a turn. Europe has not been a factor in any true sense. A little alternate selling and buying from that quarter summarizes its operations in our market. The whole speculative situation, in fact hinged on the action of money and exchange, and on the large importations of gold which have followed the break in foreign exchange rates. This, with the more promising political outlook, would seem to be responsible for the improved tone of the stock market and the decidedly more cheerful feeling which is now asserting itself in speculative quarters.

At the beginning of the week the main question at stake seemed to be whether the New York banks would issue Clearing House loan certificates or not. It was made public on last Saturday morning that the National Bank of Commerce, in which Mr. J. P. Morgan is a director, had filed an application to the loan committee for $1,000,000 of certificates, conditioned on other applications being made, and on the approval of the step by the bankers. The fact that the Clearing House statement of last Saturday was more favorable than had been expected, showing a loss of only $2,000,000 or so in reserve, was explained by the large number of loans that had been called in Wall street, and as heavy demands for currency and rediscounts were being made by outside banks on their New York correspondents, it was expected that the proposition would be agreed to when the loan committee met on Monday. They did nothing of the kind, however, and it would seem that serious opposition to such action developed in the Clearing House, not only because the stronger banks would virtually have to carry the ones whose resources were widely distributed, but for the reason that there is due appreciation of the unfavorable influence of an undue assumption at this crisis in the country's financial history of such a positive control over the money market on the part of the banks of this city as the step in question involved. As to the fall in exchange and the subsequent increase of the gold importations to larger proportions than have been seen since 1890, other columns of this issue give a more detailed account. It is on this and on the easier tone of the money market that the improvement is based.

Boston Stock Market.

The market has shown a general dullness, with values fairly maintained, the range being small. On most stocks values have been forced low, and it is hard work to depress them further. Chicago, Burlington & Quincy lost 1¼ points compared with a week ago, with Atchison ⅛ point off, and Mexican Central ⅝ point lower. Boston & Montana has met with fair attention, with a decline of 1½ points for the week. Sugar has been quite firm, and closes ⅜ point higher, with fair transactions, while Bay State Gas closes 1⅜ points lower, with quite liberal trading.

Prices of principal shares, with volume of transactions, have been as follows:

General Mention.

The reorganization managers of the Northern Pacific Railroad Company give notice to holders of certificates of deposit, of either common or preferred stock, who have failed to make payment of any installment of cash payable as heretofore called under said plan, and who shall not before September 15 make payment of all sums due thereunder, together with 6 per cent. interest thereon from the several dates when such sums were due and payable, and also a further sum equal to ¼ per cent. upon the par value of stock deposited, will, upon September 15, without further notice or action, cease to have any rights or to be entitled to any benefits under the plan and agreement. In every such case the stock deposited and the cash heretofore paid in respect thereof will vest in and belong to the reorganization managers, and may by them be used for any of the requirements of carrying out the said plan, and no certificate-holder then in default will be entitled to the redemption of such certificate, or to the return of any stock thereby represented, or to have any further interest or rights in respect thereof. Payments may be made at the offices of J. P. Morgan & Co., in this city; Drexel & Co., Philadelphia, or at the Deutsche Bank, Berlin.

GENERAL TRADE.

NO IMPROVEMENT IN DEMAND IN STAPLE LINES.

RESTRICTED COMMERCIAL DISCOUNTS, HIGHER RATES FOR MONEY AND PARTIAL SUSPENSION OF TIME LOANS HAVE A MARKED INFLUENCE ON COMMERCIAL AND OTHER ENTERPRISES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, August 28—General trade continues slow, with conditions no better. The rates for money are high, and the extreme rates asked on time loans affect business unfavorably. Banks continue to take care of their regular customers, but they feel obliged to turn down all outside offers for accommodation. It is almost impossible to quote rates. They are not only nominal, but are based on unusual conditions and private agreements. Rates for commercial paper and time loans have been high during the past few weeks from the fact that call money is bringing such good rates, and is considered a more sure and at the same time a more profitable investment. The minimum rate on call is 6 per cent., with collateral loans at from 6 per cent. upwards to 8@9 per cent. on commercial paper. The prospects of larger gold importations tends towards increased confidence. The boot and shoe trade is quiet, with old orders getting towards completion. Samples for spring are selling freely, and the prospects are unfavorable for many case orders until after the election. Leather is going slowly, while with hides easier prices for leather are more in buyer's favor.

Providence, August 28.—Cotton cloths have advanced this week 1/16c. and the market seems stronger. The mills are running on short time. General business remains quiet. The banks are renewing customers' loans at 7 per cent., but are taking very little outside paper. Time loans are made for a short time only, as money is loaned mostly on call. The advance over the past few weeks seems to have been caused by the falling off of deposits and circulation at New York and lack of confidence, owing to the uncertainty of the political questions.

Philadelphia, August 28.—There is practically no demand for wool. Dry goods jobbers report a scarcity of orders and are doing little or no business. Leather and morocco are quiet. A large number of the factories are running on part time only. Prices are low. There is a little doing in lumber. Prices are low, but there is no encouragement to buy.

Money rates have advanced, and are nominally at bank 6 per cent. for call money. Bankers won't let anybody have time money unless under exceptional circumstances. Brokers' rates for call money are 7 to 9 and even 10 per cent., with collateral 7 to 8 per cent., but in every case the loan must be "gilt-edged." Bankers do not tell the reason for the increase, contenting themselves with saying "I don't know," and attributing it to a number of causes, perhaps one or all of them failures, rumors, or to uncertainties resulting from existing political conditions; but the facts seem to be that the people who have been borrowers, and always up to a reasonable limit, now want to exceed that limit. The refusal to go further by those with whom they have dealt has sent them shopping for money, and to this class has been added some who seldom or never borrowed. There is a greater demand for money than usual—it may be called extraordinary—and the basis for it will probably be found in the small country storekeeper, who for three years of depression has continued his old practice of supplying goods to his customers on credit, who have paid when and as they could, and, with the gradual but steady shutting down of various industries, have been unable to keep up their payments, until the storekeeper's stock to-day is almost at the point of exhaustion, and his capital is represented largely by uncollectible accounts, or accounts which are practically so at the moment. In his turn he is unable to pay the jobber, who is forced to borrow. The same thing holds good up to the importer and manufacturer, and all this while the owner of money (cash) is apparently gathering it in, afraid to trust it with anybody.

Pittsburgh, August 28.—Business here has continued dull, and in volume has fallen off some compared with the week previous. The local money market is rather tight, which is ascribed principally to the unsettled political conditions. Local banks are caring for their regular customers, and so far no attempt has been made to increase the regular discount rate. The iron market remains unchanged and business continues dull. There is practically no demand, and but few small sales are reported within the past week.

Buffalo, August 28.—There is no manifest improvement in the general business situation; money is close, but the banks are able to take care of their regular customers at former rates. They are declining to take new business.

West and Northwest.

Cincinnati, August 28.—Business is inactive. Manufacturers continue to reduce forces. Money is scarcer, caused by shrinkage in deposits, in which country banks figure conspicuously. Rates of interest are, time, 6@8 and call 7@8 per cent. New York exchange is abundant at 50c. discount.

Cleveland, August 28.—Merchandising drags slowly within conservative and waiting lines, and industrial operations continue quiet and unchanged. The iron and ore markets are lifeless, with little change looked for until after the election. Country collections slow. Under the same influences governing elsewhere, the money market continues firm, with rates for commercial paper practically unchanged. Very few time or outside loans are being made.

Detroit, August 28.—The volume of business in all lines is light. Collections are slow. Money is close and the demand moderate. Time and call loans are 7 per cent., an advance of ½ to 1 per cent., owing to the uncertain outlook.

Chicago, August 28.—There has been a small increase in the number of outside buyers here for dry goods, clothing and shoes, and a moderate enlargement in sales. There has also been more call for light hardware and a fair run of small orders for bar iron, but calls for steel rails, rods and billets were few and far between. Sales of pig iron are a trifle larger, but not enough to cut any figure in ordinary times. When a manufacturer or dealer sells 1,000 tons in a week now he considers himself lucky. Barbed wire is lower, but in other lines holders are not openly offering reduced prices. At the same time, however, they never let a good buyer get away if there is a small profit to be secured. This applies not only to jobbers, but to manufacturers. Jobbers are buying cautiously and are reducing stocks to as low a point as possible, and there is a disposition to let the manufacturer carry the goods. Lumber is dull and easy, with the outward movement the lightest since 1893, and about half of last year's. Butter, eggs and cheese have advanced, and potatoes declined. Wool receipts are 773,286 pounds.

Exchange is $1.10 discount. Interest rates have advanced from 5@6 at the last of July to 6@7; very little is to be had at less than 7. Bankers and others who loaned heavily on Diamond Match and New York Biscuit have had several millions tied up, and deposits have decreased both with commercial and savings banks. Demand for loans, while not active, is large enough to absorb all that bankers want to put out. Regular customers are being cared for, but outsiders cannot get money. More money is being given to grain handlers, who will bring it from the west and ship east, than to other classes. The situation, on the whole, is better than last week. Collections are slightly improved but still slow. Chicago banks have ordered $2,000,000 in gold from London, and are figuring on more.

Indianapolis, August 28.—Interest rates are the same to old customers, but no new loans are taken, and no time loans are being made.

Louisville, August 28.—There is no advance in discount rates for either commercial paper or time loans. Jobbers in general merchandise report a better demand and larger sales, especially in dry goods and hardware. Collections fairly good.

St. Louis, August 28.—Purchases continue to be limited to immediate requirements both by the wholesaler and by the retailer, and this policy is becoming stronger as election time approaches. While leading manufacturers and jobbers of staples say the volume of business is nearly equal to the same period of last year, others in same and various lines report a gradual falling off. The movement of lumber is very light. Wool is uninteresting, although a slight gain is noted in sales of the coarser grades. There is a feeling that hides will not go lower. Stocks and receipts, however, are light. Inquiries for about 2,000 tons of pig iron are in this market, mainly in small lots. Collections dull. Money close at 7 and 8 per cent. on call and time. Banks have advanced rates mainly on account of conservatism, and regular customers obtain favors at slightly lower rates.

Kansas City, August 28.—Wholesale dry goods,

boots and shoes and groceries report large sales and better collections than in the previous week. Retail dry goods and furniture houses are having a good trade for cheap lines. Live stock values continue low, with ordinary sales. Discount rates for commercial paper and time loans have not advanced.

Milwaukee, August 28.—No improvement is noted in any particular branch of trade, and the volume of business continues light, with collections slow.

St. Paul, August 28.—With dealers in dry goods, groceries and hardware trade has shown some improvement during the past week, while with boots, shoes, hats, caps and other staple lines it remains only fair. Heavy house sales are looked for next week, as many country dealers are expected to visit the city during the Grand Army encampment, which occurs at that time. With the exception of boot and shoe houses, where there is a slight falling off, collections show some improvement. Exchange is $1.50 discount. Rates of discount on commercial paper and short time loans have advanced 1@2 per cent. This is largely attributed to the disturbed condition of business incident to the political campaign, but the extra demand for money required to move crops, no doubt, has something to do with it.

Minneapolis, August 28.—Dry goods, hats, boots, shoes and groceries are moving with more freedom. Drugs, hardware, agricultural implements and crockery are quiet. Flour is active but lumber is quiet. Discount rates have advanced within two months, principally because of shrinkage of deposits in banks.

Duluth, August 28.—General trade features show very little change from last week. Discount rates for commercial paper or for time loans have advanced some of late in sympathy with the stringency in the money market in eastern financial circles.

Omaha, August 28.—Trade in all lines is exceedingly quiet; the disposition of buyers is to supply only immediate wants, and they are holding off until after election before stocking up. There has been no advance in discounts for commercial paper or time loans. The banks are taking care of their customers necessarily, but are not loaning any money for speculative purposes.

Sioux Falls, August 28.—Trade continues comparatively quiet with jobbers. Some improvement is noted by retailers.

Southern Cities.

Charleston, August 28.—Banks report they have been compelled to reduce the volume of loans and discounts considerably, and although old friends are accommodated at the same rates, yet in many instances rates have advanced. Tightness is caused by a desire to keep money intact for moving the crops. Cotton is coming in well. Business is opening up freely.

Savannah, August 28.—Retail dealers complain of excessive dullness in trade and poor collections, due to the exodus of people to the mountains, etc. Jobbing lines are fairly brisk. Naval stores are firm, with a good demand and receipts a little brighter. There will be a two-thirds decrease in the cutting of boxes the coming season, and higher prices on turpentine looked for.

Atlanta, August 28.—No advance in discount rates for commercial paper, but thirty, sixty and ninety-day time loans and longer time loans are generally discontinued. Cause, silver agitation. Trade in general is only fair. Collections slow.

Augusta, August 28.—Trade dull, and collections are slow.

Jacksonville, August 28.—There is no change from last week.

Birmingham, August 28.—There is no improvement in business. Collections are slow. Merchants are hopeful of a better trade and collections as cotton begins to move.

Chattanooga, August 28.—Merchants report no change since last week.

Nashville, August 28.—Trade keeps up to a fair volume, considering the conservative policy employed by buyers. Collections continue fair. Rates for commercial paper and time loans are not changed. Banks are restricting accommodations, and are only lending where necessary to protect regular patrons. Renewals are continued at old rates. The same scarcity appears among individual lenders, though as a fact the money supply is full. Requirements among merchants are light. Jobbers count on prompt and liberal payments from country trade this fall.

Memphis, August 28.—General trade continues quiet and collections are fair. Money on short time loans has advanced here from 7 to 8 per cent., according to the character of the paper. The same inclination prevails here as at the east, and banks are not inclined to make loans now as freely as they did two months ago. No long time loans are being made at present.

New Orleans, August 28.—Orders for supplies continue very conservative. The local stock of sugar is working off quietly. There is a fair demand for rice, with stronger market predicted, owing to the unfavorable crop reports. There is a large movement of bulk grain from the west for export. Money is very firm under an active demand for crop purposes. Discount rates for commercial paper and for time loans have advanced about 1 per cent. New credits in all lines are much restricted, owing to the stringency in the money market and the generally unfavorable condition of trade.

Galveston, August 28.—Trade is confined to staple lines, with only a limited demand. Cotton crop prospects are somewhat improved by the recent rains, but it is conceded that the crop will be short. The banks are very conservative in making loans, but there has been no advance in the rate.

Pacific Coast.

San Francisco, August 28.—There is no change in commercial lines. Wholesale dealers report trade quiet and collections slow. Wheat is active and prices are firm. Hides and leather are dull. There is considerable demand for fruits, though prices are low.

Portland, August 28.—Local trade shows no improvement and business is still very slow, with but small prospects for immediate improvement. Dry goods is as lively as any other line, while the natural products of the state are particularly inactive. Drugs are more in demand than formerly.

Tacoma, August 28.—The general tone of business is decidedly conservative. Merchandise is moving only in quantities required for immediate needs. Some authorities report a good deal of eastern business in sight, but holding off pending the campaign. Wheat movement is slow.

Seattle, August 28.—Groceries and hardware are quiet. Provisions and fruits are selling well. Large shipments are made to Alaska of general goods and live stock, and more are to go to-day New wheat is arriving, while good is shriveled, and on that account the price ranges lower, particularly in milling circles.

Canada.

Montreal, August 28.—A slight improvement is noted in general trade, although wholesale houses report orders light and collections poor. Exports of produce and other products from this port have increased, and freight rates on ocean steamers are considerably higher than former years. Quebec city reports the volume of business as a fair average. Crop prospects in this district are favorable for a large yield.

Toronto, August 28.—The condition of wholesale trade is unchanged. Prospects are considered good, but the movement of merchandise is yet restricted; payments slow.

Halifax, August 28.—The volume of business for the season is an average one. Collections are only fair. The apple crop is large and quality excellent. Wheat, oats and barley promise extra good. Newfoundland fishery reports from Labrador are not encouraging. At some places there was a good catch, while at other parts of the shore the catch was very short.

Total Wheat, Corn and Flour Exported for the Week.

Dry Goods.

Trade is very conservatively conducted in all departments, with operations for daily needs only. The high cost of raw cotton compared with the price of goods tends to strengthen the market, and some advances are asked, but the depressed tone continues, and any advance comes hard under the present limited demand. Converters are doing little, and this stops one of the largest outlets for cotton fabrics, and it looks as though any increase in the demand later will find the market very short of goods. Printed fabrics are quiet, with ginghams very dull. Dress woolens are slow in all departments. Mill agents report a very slow business, while jobbers are meeting with only a hand-to-mouth trade. Men's-wear woolens are slow, with orders for spring lightweights backward, and it looks as though this latter trade would not amount to much. As yet orders have been largely confined to the cheaper fabrics.

Wool.

The market continues dull and the tone weak under the depression of large stocks and a limited demand. The supply of territory wools on the market is excessive, and some sales have recently been made at lower prices. The asking price for fine medium and fine wools is on the basis of 27@30c. scoured, but a cash buyer disposed to take a round lot could get concessions from the inside price. Manufacturers are not in position to buy largely, however, even if the price is low, the high money market being against operations. Fleece wools are in moderate supply, particularly fine grades, and prices are held steady in the absence of trade. Foreign wools are dull, but held fairly steady on the scoured basis of 38@47c. for clothing and combing Australian. The lot of wool reported shipped to England by the Arlington mills last week went on steamer Baltimore to London, 800,000 pounds.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only for four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

PUBLIC AND PRIVATE DEBT OF THE UNITED STATES.

The *Engineering News* says: "Among the publications of the Department of Labor at Washington is a bi-monthly 'Bulletin,' containing current facts relating to the condition of labor in this and

in other countries, and other information deemed of value to the industrial interests of the United States. It is edited by Labor Commissioner Carroll D. Wright, and by his chief clerk, Mr. Oren W. Weaver.

"A recent number of this bulletin treats of the public and private debt of the United States, a subject that is being discussed a good deal of late. The compiler of the bulletin explains by way of preface that it is practically impossible to show the private debts of the people, and even if it could be ascertained the result would be meaningless. A man may owe a large sum and yet have no burden of debt if an equal sum of money is owed to him. What is of interest is to know the debt that must be paid, not by payments of other debtors, but by the fruits of industry and economy. The following statistics, therefore, show these debts, which are offset little, if any, by credits. All except 12.14 per cent. of the items used are taken from the census returns of 1890, and are supposed to represent the minimum debt at that time.

"Somewhat condensed from the tables given, the statement stands as follows:

Steam railways, funded and unfunded debt		$5,669,431,114
Street railways, funded and unfunded debt		*182,240,754
Quasi-public corporations:		
Telephone companies	$4,092,585	
Telegraph companies	20,000,000	
Public water companies†	26,127,489	
Gas companies	75,000,000	
Electric light and power	45,000,000	
Transportation companies, not otherwise specified, canals, turnpikes, bridges, etc	114,208,678	
		348,328,132
Total		$6,200,000,000
Real estate mortgages		6,019,679,985
Crop liens (estimated)		650,000,000
National banks, loans and overdrafts		1,904,167,351
Other banks, loans and overdrafts		1,172,918,415
National, state and local taxes		1,040,473,013
Other private debts (estimated)		1,212,761,236
Aggregate private debt		$18,200,000,000
Public debt, less sinking fund:		
United States	$891,960,164	
States	228,957,389	
Counties	145,048,045	
Municipalities	724,463,060	
School districts	36,701,948	
		2,027,170,546
Aggregate private and public debt		$20,227,170,546

* By table published in our issue of July 6 this item is now about $600,000,000.
† Not owned by cities.

"In the above the debts of individuals and private corporations amount to 59.33 per cent. of the total, and quasi-public corporations form 30.65 per cent. The real estate mortgage debt alone is 29.76 per cent. of the total, and the railway companies follow with 28.03 per cent. The public debt of the United States forms 4.41 per cent. of the total, as compared with 3.58 per cent. for municipalities. The author places the wealth of the United States in 1890 at $65,037,091,197, so that the total private and public debt represents 31.10 per cent. of the total wealth of the country. The per capita private debt in 1890 was $291 and public debt $32, an aggregate of $323, or $15.94 per family of 4.93 persons. The real estate mortgage debt is $6,019,678,985, while the estimated value of taxed real estate and untaxed mines was $36,025,071,490."

TRADE WITH NICARAGUA.

Hon. Lewis Baker, United States minister to Nicaragua, writes to the State Department that while the entire trade of Nicaragua is not great, yet the country is naturally an exceedingly rich one, and that a profitable business will undoubtedly be developed as railroads and other means of transit are constructed. The President of Nicaragua is awake to the value of these improvements, and is partial to Americans and American progress. Minister Baker says it is within the power of American merchants and manufacturers, by a combined movement through boards of trade and chambers of commerce, to lay strong foundations for the future control of the foreign commerce of Nicaragua, which commerce is now substantially in the hands of the Germans and English.

"My observation during the three years of the most turbulent times Nicaragua has experienced in thirty years," writes Minister Baker, "leads me to the conclusion that the risks to Americans doing business in Nicaragua are greatly overrated. It is true that in times of military disturbances the trend of business is interrupted and sometimes suspended. But I believe that an American who goes into private business, avoiding concessions from the government, which necessarily place him under obligations to the government and give it a license to interfere in his affairs, and strictly attends to his own business and intermeddles with no other, is perfectly safe here. If he conducts his business on generally recognized business principles, he is as likely to succeed here as in the United States. No American should come to this country without capital and a definite object. He can no more make something out of nothing in Nicaragua than he can in the United States. Young men without means seeking situations had better remain in the United States; there are virtually no situations in the employ of others to be had here.

"The elements of success to those who endeavor to extend American trade into this promising field will be found in an intelligent understanding of the people with whom they must deal and of their language, habits and needs, and attention to the work in hand. The secret of the universal success of the Germans in Central American countries is found in their patient, persistent and quiet attention to their own affairs, their careful study of the peculiar wants of their customers, and their complete abstinence from any concern in the affairs of others. They often intermarry with the natives, making permanent homes here, yet seldom mix in the affairs of the country. They are spreading themselves in all the departments of Central America, and goods of German and English manufacture are found for sale in every pueblo, however small."

MEXICAN AND UNITED STATES DOLLARS.

The Philadelphia *Press* says: "A week ago Thursday, August 13, 40,000 ounces of silver were sold in New York for 68½c. an ounce. Yesterday silver was at 66c. an ounce.

"With this fall the Mexican dollar lost nearly 2c. in value. It is worth silver. It fell with silver. The United States silver dollar passed for 100 cents a week ago. It passes for 100 cents now. A man with a Mexican dollar in his pocket lost 2c. of its value. The man with a United States dollar in his pocket lost nothing.

"The Mexican dollar wabbles with silver. The United States dollar stands solid by gold. Measured in gold and maintained at a parity with gold its value remains. Within three years the Mexican dollar has been as high as 70c., and it has been as low as 48c. Its value rises and falls with the demand for silver, and this varies with the trade in silk and the trade in tea, with exchange on India and the payment of war indemnities by China to Japan, and all the world of trade and speculation. Within the year it has been as high as 60c. and has dropped to its present price.

"This is the kind of seesaw money the United States is asked to adopt. Up and down. Now high and now low. Never as good as a gold dollar, and never maintaining any certain ratio with it. Labor receives in this country in wages in a year $2,000,000,000. If these wages had been paid in silver this year the loss in the price of silver in the past six months would have cut the value of these wages down by $100,000,000, a tax on labor one-fifth as large as that of the cost of the federal government for a year.

"Does any man who works want to be paid in Mexican dollars which wabble instead of in United States dollars on a gold basis which remain at an even gold value?"

INTERNATIONAL GEOLOGICAL CONGRESS.

The *Engineering and Mining Journal* says: "The seventh triennial meeting of the International Geological Congress will take place in August, 1897, at St. Petersburg, by invitation of the Russian Emperor. The programme proposed by the committee will enable the members of the congress to take advantage of this opportunity to study the geological and topographical features of Russia in Europe, the Emperor himself offering all the visiting geologists free transportation, first-class, over the Russian railways, before and after the sessions of the congress, including the excursions.

"Membership in the congress is open not only to professional geologists, but also to other persons interested in the science, and may be obtained in accordance with conditions which may be learned by addressing the secretary. The meeting will extend over eight days, and the sessions will be devoted to discussing general principles of geology and the present state of the science in the effort to bring about harmony among the geologists of the world. Much time will be given to the exposition of the geological work being done in Russia, especially in those regions covered by the excursions. The usual facilities will be given for the display of instruments, maps and books pertaining to geology.

"The principal tour proposed before the meetings is from Moscow, eastward to the Ural mountains, crossing that chain and visiting several famous mineral and mining localities, including Ekaterinburg and Tagilsk and returning by way of Perm to Moscow. Persons especially interested in historical geology will, however, take the excursion into the province of Esthonia, while those who prefer crystalline rocks and glacial geology will spend six or seven days in Finland. An excursion which will occupy a month is proposed for the time immediately following the close of the congress in St. Petersburg. After visiting Moscow and its environs in a body the party will split up into three divisions, one section going by way of the Donetz Valley to the baths of Vladikavkaz, the second going by the Volga river, and the third by the Dnieper Valley to the same rendezvous. Thence the route leads over the Georgian military road to Tiflis, stopping on the way to visit some of the glaciers of the Caucasus mountains. From Tiflis a visit will be made to Baku, the headquarters of the petroleum fields of the Caspian sea, and afterward to Batoum, on the Black sea, whence ship will be taken for Kertch, where a study of the Crimea will be begun which will end at Sebastopol, where the congress will finally dissolve. Six alternative and supplementary trips are offered in connection with the great tour for those who are particularly interested in mines, in glaciers, in the ascent of Mount Ararat, etc.

"Persons expecting to attend the congress are requested by the committee to notify the general secretary of the congress by next October, as to which of the excursions they propose to take. The president of the congress is A. Karpinsky, director of the geological survey of the Russian empire, and the secretary, to whom all communications should be addressed, is Th. Tschernyschew, St. Petersburg.

"The last meeting of the congress was in 1894, at Zurich, and the one preceding that was at Washington, in 1891, in connection with the American Association for the Advancement of Science and the Geological Society of America."

A NEW INDIAN INDUSTRY.

The London *Times* says: "The remarkable development of the Rhea fiber throws for the moment all tariff differences between Bombay and Manchester into the shade. The Indian government has long been aware that in this widely-spread variety of the nettle family its provinces possess a source of unused wealth. In 1869 it offered a reward of £5,000 for the invention of a machine or process which should separate the delicate fiber from the bark at a cost consistent with the requirements of commerce. An offer of Rs.50,000 was renewed in 1877. Various machines were submitted under these inducements, but they failed in regard to the essential element of cheapness, and after many trials the offers were withdrawn. They effectually attracted, however, the attention of experts in Great Britain, Europe and America. Rhea became recognized as one of the most valuable fibers known to the ancient or modern world. Its use in Egypt, India and China dates from before the dawn of history. Rhea cloth is unrolled from the mummies of the Nile and unearthed in the burial mounds of Assam. The nets and lines spun from it had, for strength, fineness and durability, no rivals among the fishermen of Bengal and the Malay Archipelago. As 'China grass' it won its way about the beginning of this century into European commerce.

"The difficulty is to separate the strong silky fibers of the bark from the outer cuticle and the tenacious gums in which they lie embedded. In the past, when labor was of little account, the wives or daughters of the husbandmen and fishing communities scraped and washed small quantities of the bark till, by the persistent toil of many days, each family produced a few handfuls of the much-prized fiber. But the cost of this manual process proved an insuperable difficulty in the adoption of Rhea for modern textile manufactures. Dr. Royle, as industrial adviser to the Indian Office, showed that the Rhea fibers 'are exceeded by none in fineness, excel all others in strength, and may be fitly compared to the trunk of an elephant, which can pick up a needle or root up a tree.' He declared that, if the difficulty of separating the fiber can be overcome, 'the benefits to India and the world will be incalculable.' It is this problem that the chemists and machinists of Europe and America have during the past thirty years been endeavoring to solve. France and Germany at once entered the field with factories for the extraction of the fiber. They worked it up into many forms, from ropes and sail canvas to plushes and dress-pieces resembling silk goods in appearance. They failed, however, to produce a filasse, or clean fiber, which should be at once cheap and serviceable. No machine or merely mechanical operation eliminated the resins with a perfection which yielded fine yarns, except at a cost prohibitive of their general use.

"The chemists seemed for a time to be more successful. They produced by means of various reagents a filasse which was at once cheap and apparently sound. Beautiful fabrics were woven on the continent, and the inventors laid out a large capital, in the belief that they had solved the problem. But by the time the fabrics came into the hands of the consumers, indeed often before they passed from the shops of the retail dealers, it was found that the chemicals had injured the fiber, and the goods were often returned to the makers. Process after process and machine after machine failed to extract a Rhea fiber which should be both durable and cheap.

"The honor of solving the problem has fallen to an English chemist, born, we believe, in India. Mr. Gomess, after many experiments, elaborated a process which the Indian government is at length able to pronounce a complete success. 'The difficulties which previously existed,' says the official memorandum lately issued by its Inspector-General of Forests, 'in regard to the extraction of the valuable textile fiber from the bark of the Rhea plants have been entirely overcome by what is known as the Gomess process, and a large demand has sprung up for ribbons of dried bark with every probability of its increasing to enormous proportions.' After referring to the operations of the Rhea Fibre Treatment Company in London and its dependent associations now being established throughout India, Europe and America, the official memorandum proceeds to indicate how the production of the fiber may be increased in practically unlimited quantities to meet the demand. 'These facts seem to point to the conclusion that we are on the dawn of an industry which even promises to rival jute cultivation.' The inspector-general then draws out a scheme for aiding the cultivators by official information as to the areas most suitable for the growth of the plant and the varieties best adapted to each locality, and by government experiments as to the best modes of stripping, drying and baling the bark. The subject, he insists, 'becomes all the more important and urgent as reports reach us from the French colonies of considerable activity in the Rhea fiber trade, and as it would not be convenient to be outstripped by them.'

"The Gomess process adopts zincate of soda for the elimination of the resins, and effects it without the slightest injury to the fiber. After the 'ribbons' or strips of bark have been freed from dirt they are placed in weak acid baths for a night. Next morning they are passed through a mild alkaline bath, and then boiled in weak solutions of caustic soda to which zinc has been added. When washed and dried by the usual mechanical means the fibers emerge as long, silky filasse, entirely free from the cuticle and resinous gums in which they were embedded, clean, white and ready for the comb of the spinner. They take the most beautiful dyes and can be worked into every variety of fabric from gorgeous velvets to cheap drills and delicate laces. The combined lightness and toughness of the fiber render it peculiarly suitable for tents and ship canvas. Three-fifths more cloth of equal strength can be made from Rhea than from the same weight of linen. That is to say, 1,000 yards of the Rhea canvas weigh only as much as 600 yards of linen. Its durability and resisting power to strain are also much greater. The government of India is taking effectual steps for the rapid extension of the cultivation. If its forecast be correct, we may congratulate ourselves that what promises to become a great new industry has been rendered possible by the science of an English chemist and has been practically inaugurated by an English company."

"WHAT BRYAN'S PANIC WOULD BE."

The Philadelphia *Press* editorially says: "Mr. Bryan admitted in one of his early speeches on the silver question that free silver coinage would create something of a panic, but he treated this as if it were a detail that could be dropped in discussing the necessity for this tremendous change from a 100-cent to a 50-cent dollar.

"What kind of a panic would it be? The fear of a silver standard brought the aggregate of liabilities of failures in 1893 up to $382,000,000. This excludes about $100,000,000 of banking failures. In all, the mere prospect of a silver standard in 1893 wrecked 641 banks and 14,066 business firms, with total liabilities which were not less, all included, than $500,000,000.

"What would the reality do? All the gold in circulation, $455,000,000, would disappear over night. The gold in the Treasury, $103,000,000 yesterday, would be drawn out by presenting Treasury notes or legal tenders. These would be withdrawn from circulation and the gold received in exchange would be hoarded. From both these operations over one-third of the currency in circula-

tion, or about $558,000,000 of gold, would cease to be money and become a commodity, quoted at 200 in the dollars of the day.

"This contraction, such as neither this country nor any other has ever seen, would bring trade and credit to a stand-still and alone produce a tremendous crash in stock and bond values. This is not all. The exact aggregate of American securities held in all shapes abroad no one knows. No one places the amount at less than $2,000,000,000. These would come back wholesale, as they have been piecemeal for three years, and would be dumped on the market. Just as all prices of securities came down with a run owing to the contraction of the currency, foreign sales of shares and bonds would depress quotations still further. The panic of 1873 depressed sixty active stocks from an average of 76 in 1872 to 33 in 1877. At present sixty active stocks which were 78 in 1890 are at an average of 42. A blow such as we have been describing would drive shares and bonds not to half or a little over half their former value, but to a quarter, a fifth or a tenth of their value.

"Railroad shares and bonds amount to about $11,000,000,000 at par. City, state and federal bonds are $2,000,000,000, with manufacturing and other securities of at least as much more. All are owned abroad and all would suffer. In all there are about $15,000,000,000 at par of securities of all classes which would be affected. These are collateral for a large part of $2,000,000,000 of national bank loans. Out of $2,000,000,000 savings bank deposits about $1,100,000,000 are secured by these various securities, particularly state and city bonds. The assets of insurance companies, about $1,100,000,000, are in large share directly and indirectly based on these securities. If they were all held at home they would pass to a silver value with all other debts. They are not all so held. At least $2,000,000,000 are held abroad. These would be sold wholesale. These sales would destroy quotations. What company or corporation could stand this wholesale destruction of assets? Those that held gold bonds would be better off, but every railroad which had issued gold bonds would be brought to the very edge of ruin because its interest charges would be doubled.

"Note the steps. First, a terrible contraction of the currency; second, heavy foreign sales; third, a sweeping fall in value in all securities; fourth, a strain on every corporation, large or small, of corresponding amount; fifth, wholesale failures, closing mills, factories, stores and banks; sixth, as this ruin swept over the land the silver deluge would come in, the currency would be inflated to silver values and every man with goods in stock or in store would double his prices to save something from the wreck. Securities of all sorts would tumble because they would be payable in silver and not in gold. Goods would double because they would be measured, just as goods are now in Mexico, by gold values. Every one of the 14,000,000 people in the United States paid salary or wages would find their wages unchanged, but all they bought doubled in price, and millions of them would be thrown out of work by the crash of failures, the closing of banks and the stoppage of industry.

"The world has never seen such a panic. We trust it never may. It is certain to if free silver coinage is adopted. We have stated nothing which any intelligent man cannot verify for himself, and no man, not even Mr. William Jennings Bryan, has ventured to deny that panic would follow the first adoption of the Chicago plan. He says it is worth a panic. Do you?"

RAILWAY CORPORATIONS INCREASING.

The Chicago *Railway Age* says: "The number of railway corporations in the United States continue to increase, notwithstanding consolidations and dissolutions. The last statement of the Interstate Commerce Commission reports 1,965 corporations in existence, of which 1,013 maintained operating accounts and 800 financial accounts. During the year 14 roads were abandoned, 32 reorganized and 37 consolidated or merged, a total of 83; but the columns of the *Railway Age* show that a far greater number of new companies were organized in the same time. An idea of the comparative number of large and small railway companies, as indicated by the mileage operated, is given by the following figures which we condense from the Interstate Commerce Commission's report:

	Total miles.
42 lines operate over 1,000 miles each	100,714
24 " " 600 to 1,000 " "	18,896
22 " " 400 to 600 " "	11,177
45 " " 250 to 400 " "	14,367
971 " " under 250 " "	35,771

Thus it appears that 133 roads operate 145,155 miles, or 80 per cent. of the total mileage in the country."

BUSINESS FAILURES.

THE WEEK'S FAILURES, UNITED STATES AND CANADA.

States and territories.	*Week ending Aug. 27, 1896.*	*Previous week.*	*Weeks corresponding to this week* 1895.	1894.	1893.	1892.

REORGANIZATION OF

NORTHERN PACIFIC RAILROAD CO.,

Under Plan and Agreement dated March 16, 1896.

23 Wall Street, New York,
August 21, 1896.

Notice is hereby given that all holders of certificates of deposit of stock, either common or preferred, of the Northern Pacific Railroad Company, under the said Plan and Agreement, who have failed to make payment of any instalment of cash payable as heretofore called under said Plan, and who shall not before September 15, 1896, make payment of all sums due thereunder (together with six per cent. interest thereon from the several dates when such sums were due and payable), and also a further sum equal to one-quarter per cent. upon the par value of the stock deposited, will, upon September 15, 1896, without further notice or action, cease to have any rights or to be entitled to any benefits under the said Plan and Agreement in respect of any such stock or certificate. In every such case the stock deposited and the cash heretofore paid in respect thereof will vest in and belong to the Reorganization Managers, and may by them be used for any of the requirements of carrying out the said Plan and Agreement, and no certificate holder then in default as aforesaid will be entitled to the redemption of such certificate, or to the return of any stock thereby represented, or to have any further interest or rights in respect thereof.

Payments hereunder may be made at our office, as above, or at the office of Drexel & Co., Fifth and Chestnut Streets, Philadelphia, or of the Deutsche Bank, Berlin.

J. P. MORGAN & CO.,

Reorganization Managers Northern Pacific Railroad Company, under said Plan and Agreement.

LIBERAL COMMISSION TO AGENTS.
MERCANTILE CO-OPERATIVE BANK,
Assets, $750,000. Surplus, $50,000.
Madison Sq., NEW YORK CITY.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, SEPTEMBER 5, 1896.

The convention of the National Democratic party which has just concluded its labors at Indianapolis has put forth a complete platform and has nominated candidates for the presidency and the vice-presidency. The platform contains the most vigorous declaration in favor of the gold standard which has thus far been made. It declares that the experience of mankind has shown that, by reason of their natural qualities, gold is the necessary money of the large affairs of commerce and business, while silver is conveniently adapted to minor transactions, and that the most beneficial use of both together can be secured by the adoption of the former as a standard of monetary measure and the maintenance of silver at a parity with gold by its limited coinage under suitable safeguards of law. In this way, it is declared, the largest possible enjoyment of both metals is gained with a value universally accepted throughout the world, which constitutes the only bimetallic currency, assuring the most stable standard and especially the best and safest money for all who earn their livelihood by labor or the produce of husbandry, who cannot suffer when paid in the best money known to man.

It is recalled that the Democratic party practically established by the legislation of 1834 and 1853 the gold standard of monetary measurement, and likewise entirely divorced the government from banking and currency issues. To this policy the convention declares its adherence, and it insists upon the maintenance of the gold standard and of the parity therewith of every dollar issued by the government, and declares opposition to the free and unlimited coinage of silver and to the compulsory purchase of silver bullion. It denounces "the further maintenance of the present costly patchwork system of national paper currency as a constant source of injury and peril," and asserts "the necessity of such intelligent currency reform as will confine the government to its legitimate functions, completely separated from the banking business, and afford to all sections of our country a uniform, safe and elastic bank currency under governmental supervision, measured in volume by the needs of business." It is noteworthy that the convention has nothing whatever to say about international bimetallism, which doubtless most of the members regard as an arrangement beyond the domain of present practicability, if not as an "iridescent dream" of academic optimists.

Besides its declarations upon the great issue of the campaign, the platform reaffirms the Democratic doctrine on the tariff question, denounces the principle of protection, demands the adoption of "modern and liberal policies towards American shipping," opposes discriminating duties as a means of promoting our maritime development, demands that the reform of the civil service be supported and advanced until the undemocratic spoils system of appointment shall be eradicated, and favors arbitration for the settlement of international disputes. The platform concludes with the declaration that the Supreme Court of the United States was wisely established by the framers of our Constitution as one of the three coördinate branches of the government, and that its independence and authority to interpret the law of the land without fear or favor must be maintained. All efforts to degrade that tribunal or impair the confidence and respect with which it has been deservedly held are condemned, and the declaration is made that the Democratic party ever has maintained and ever will maintain the supremacy of law, the independence of its judicial administration, the inviolability of contracts, and the obligations of all good citizens to resist every illegal trust, combination or attempt against the just rights of property and the good order of society, in which are bound up the peace and happiness of our people.

Of course, the candidates chosen by the convention do not expect to be elected, and their supporters have no idea that they will be. Those candidates are not official possibilities from any point of view, for even if the election should be thrown into the two houses of Congress, neither can hope to be chosen to office. At the same time the circumstances of their selection, no less than their prominence on the stage of affairs in the past, prompts some reference to them. The candidate for president is John M. Palmer, of Illinois, who reached the grade of major-general of volunteers on the Union side in the war, and was subsequently elected governor of Illinois and now represents his state in the United States Senate. The candidate for the vice-presidency is Simon Bolivar Buckner, of Kentucky, who, as is well known, was a general in the confederate army, and was elected governor of his native state nine years ago. Both men have many elements of popularity, and are expected to materially weaken the chances of Bryan's success in the Ohio and Mississippi valleys, where many think the decisive battleground will be. From this point of view their nomination may be regarded as strategically the best that could have been made.

Statistics of circulation show a net increase for the month of August amounting to $24,266,492. The most notable item of increase was one of $18,702,025 in gold coin, and the next largest one of $14,083,223 in silver certificates. There were also increases of $1,446,084 in standard silver dollars, $1,701,906 in national bank notes, and $35,906 in subsidiary silver. The decreases comprised $5,445,804 in United States notes, $3,145,000 in currency certificates, $2,686,008 in Treasury notes of 1890, and $425,840 in gold certificates. The statement giving the changes of money and bullion in the Treasury shows decreases of $12,810,170 in gold coin, $94,344 in subsidiary silver, and $2,072,018 in silver bullion. The increases included $1,203,916 in standard silver dollars, $1,084,008 in Treasury notes of 1890, $5,445,804 in United States notes, $1,881,948 in national bank notes, and $2,623,145 in gold bullion. There was a net decrease for the month of $2,737,700.

As compared with the corresponding date of last year there was a falling off of over $64,400,000. Only three items showed increases, namely, silver certificates, which showed a gain of nearly $22,000,000; national bank notes, which showed a gain of over $11,000,000, and standard silver dollars, which showed a gain of a little over $860,000. The decreases comprised over $15,700,000 in gold coin, not quite $600,000 in subsidiary silver, over $10,200,000 in gold certificates, over $18,100,000 in Treasury notes, over $15,500,000 in United States notes, and over $38,100,000 in currency certificates. The circulation per capita, based upon an estimated population on September 1 of 71,645,000, is put by the Treasury experts at $21.48. This represents an increase of 30 cents for the month.

National bank circulation outstanding on August 31 amounted to $229,526,449, according t othe Comptroller's monthly statement. This represents an increase of $3,583,994 for the month and $17,277,276 for the twelve months ending therewith. The portion of the circulation based on the deposit of bonds amounted to $216,250,603, which represents an increase of $4,190,070 for the month and of $22,303,231 for the twelve months ending therewith. The portion of the circulation secured by the deposit of money amounted to $19,232,875, which represents a decrease of $606,076 for the month and of $5,025,955 for the twelve months ending therewith.

According to the statistics given in the bulletin the total value of goods produced or work done in the United States for the various states and territories, in all the state prisons and penitentiaries, for 1895, was $19,042,472.33. This sum represents the value of the goods after the materials have been manipulated by the convicts. It does not represent the value which has been added by them, but represents the value of the materials on which work has been bestowed and the work itself. Under the public account system prison officials purchase the materials and convert them, by the labor of convicts, into goods which they sell. The value given includes, therefore, the value of materials purchased plus the labor expended upon them by the prisoners. An increase in the amount of work done in penal institutions during 1895 occurred in the following states and territories: Alabama, Connecticut, Florida, Maryland, Massachusetts, Minnesota, Missouri, New Hampshire, New Mexico, Rhode Island, South Carolina, Texas, Vermont, Virginia, Washington and Wisconsin.

Some interesting information regarding convict labor is contained in a recent bulletin issued by Commissioner of Labor Wright. It appears that the total number of convicts in penal institutions in the various states in 1885 was 41,887. In 1895 the number rose to 54,244. Of the number imprisoned in 1885, 1,967 were females. The number of females imprisoned in 1895 was 1,988, an increase of only twenty-one. In 1885 the number engaged in productive labor was 30,853, being 73.7 per cent. of the total number of convicts at that time, while in 1895 the number engaged in productive labor was 38,415, or 70.8 per cent. of the total number of convicts. While there was thus a decrease in the proportion of convicts employed in productive labor, it will be seen that there was also a decrease in the proportion of those engaged in prison duties, for in 1885 the total so engaged was 8,391, or 20 per cent. of the whole number of convicts, while in 1895 there were 8,804 so engaged, being 16.2 per cent. of the whole number. An increase in the proportion of the idle and sick in the ten years is observed. In 1885 the number was 2,633, or 6.3 per cent. of the whole, while in 1895 the number of idle and sick was 7,025, being 13 per cent. of the whole.

GOLD IMPORTATIONS AND THE MONEY MARKET.

The halt which occurred in the gold-importation movement early this week was, to all appearances, a temporary one. It was natural under the circumstances, however. The heavy engagements of specie for export to this country made in London had resulted in many of the importing firms being short of exchange, and their purchases of bills to cover their contracts produced, of course, an appreciable hardening of exchange, the rate for demand sterling, which was under 4.84 at the close of last week, rising by last Tuesday to 4.84¼@4.84½. As soon as the demand in question was satisfied the exchange market eased off to the extent of about ½c. on the £, and at the close of the week further gold engagements were announced in London to the extent of $3,000,000 or more. In fact, the condition of the market creates an opinion in banking circles that the inflow is altogether likely to continue. While, as was stated in these columns a week ago, there is no evidence that the bankers' syndicate has directly influenced the market or made use of premiums or inducements to facilitate the movement of gold to this country, it is understood that important negotiations are on foot which, if completed, would create further credit balances abroad, and thus make the continuance of the gold imports more probable. Among other influences of this character are the attempted negotiation of some considerable blocks of railroad bonds in London and on the continent, which it is said are not unlikely to come to a successful conclusion. Another matter of some importance is the transfer of loans upon grain to London, which furthermore releases the funds of the New York and Chicago institutions, which would otherwise be tied up in such transactions until the grain was exported. The exact state of these negotiations is not known, but it is thought that they will be carried out, and hat among their ultimate effects will be the stimulation of the export movement.

It may be mentioned that thus far no serious opposition has been offered by the large European banks to the gold movement. Both the Bank of England and the Bank of France have made slight advances in their selling price for bars and American gold. Some exaggeration has prevailed on this subject, but the sum total of these advances amounts at most to a mere fractional difference in exchange. It was somewhat different with regard to the London money market and the action of the Bank of England, which, it was reported, might raise its minimum discount rate. The latter has now remained for two years at 2 per cent., and, as discount in the London open market has risen under the flow of gold in this direction from 1 per cent. to 1⅜ per cent., there was an idea that the bank on Thursday last would make an advance of 1 per cent. in its figure. Nothing of the kind, however, was done on the day named, and it was properly observed by those conversant with the subject that such action would have been premature and impractical. In 1893, when heavy transfers of gold were made from London to New York in consequence of the currency famine here, the Bank of England did indeed raise its minimum rate from 2½ to 3 per cent., and finally to 4 per cent., which checked the gold movement. At that time, however, the open market rate in London was over 4 per cent., whereas at the present moment the withdrawal of over £2,000,000 gold from the bank in one week has resulted in a hardening of the open-market rate to the extent of only ½ per cent. The fact that the present gold importations and the character of the financial situation here have been misunderstood, not to say misrepresented, by the leading English financial papers has scarcely attracted attention. Their conclusion that the whole matter is of artificial origin, and that the syndicate has produced the movement, leaves out of account both the depression of exchange and the improved political outlook, to say nothing of the augmented exports from the United States and the increasing balance of trade in our favor.

The gold engagements effected in London or on the continent so far reported foot up $20,000,000 or more. On the face of the returns the amount is larger, but there have been duplications which make the real total about as stated. Of this $7,000,000 has already arrived, and it is gratifying to note that $4,000,000 of it has been turned in at the Sub-Treasury in this city in exchange for legal tenders. By this means the Treasury gold reserve, which on Saturday last was down to $100,957,000, has been raised to $103,000,000, in spite of small withdrawals at interior points. The effect of the gold inflow in one important respect, the maintenance of the Treasury gold reserve, is thus of the most gratifying character, and in banking circles the estimates are that fully $15,000,000 from abroad will find its way into the Treasury vaults during the current month. The relief of the strain upon the money market is also appreciable, though, at the moment, it is too soon to conclude that distinctly easy money is in sight.

PROPOSED PROFIT TO SILVER MINE OWNERS.

To the Editor of BRADSTREET'S:

SIR—In view of the declared purpose of Mr. F. G. Newlands, the head of the regular Silver party, and of Mr. W. J. Bryan, the leader of the Populist Silver party, to raise the price of the silver bullion of the world from its present value, sixty-six to sixty-eight cents an ounce, to one dollar and twenty-nine cents ($1.29) per ounce, it becomes desirable to begin to measure the quantities of silver which are to be operated upon.

The proposal which Messrs. Newlands and Bryan hold out to the silver miners of this and other countries, and to the holders of existing silver coin or bullion, is in these terms:

1st. To deprive the people of the United States of the right to make any contracts, bargains or agreements for the sale of goods or for the payment of money, except in money of full legal tender without discrimination, thus rendering specific contracts in gold coin only unlawful or void.

2d. To open the mints of the United States to the use of miners or other owners of silver bullion for the conversion of ingots of standard silver into coins of standard silver of full legal tender at the ratio of sixteen to one, at the cost of the taxpayers and without expense to such owners.

3d. To compel the people of the United States, by a force bill or act of legal tender, to accept these dollars made of silver at a cost to the owners of bullion of less than fifty cents each, at the rate of, or as the equivalent of, one dollar in gold.

We may now proceed to consider only one source whence the bullion would in part come, of which the value is to be doubled by the proposal of Messrs. Newlands and Bryan.

I now submit an analysis of the last annual report which is before me of the Broken Hill Proprietary Company of New South Wales, presented January 30, 1896, and covering transactions to November 30, 1895.

It will first be observed that there has been a rapidly increasing product of silver bullion in recent years. The world's product for 1890 to 1894, inclusive, was 750,262,351 ounces, or 150,000,000 ounces a year. (See report of the Director of the Mint.) The Broken Hill Mine produced 52,299,882 ounces in this period, or $14^{34}/_{100}$ per cent. of the whole.

The opening of this mine was in 1885, on a paid-up capital of £384,000=$1,866,240. Up to November 30, 1895, it had produced 291,607 tons of lead, 15,835 ounces of gold, 2,603 tons of copper, 75,774,743 ounces of silver. The total expenditures or cost of production have been £7,794,196=$37,859,792.

If this cost is divided by the product of silver only, it makes the cost of the silver bullion delivered in London within a fraction of 50 cents an ounce. If a fair portion of the expenditures were charged to the cost of the lead, gold and copper, the charge against the silver might be reduced to forty (40) cents an ounce or thereabout.

The sales in London came to £14,860,336 =$72,221,233, which, divided by ounces of silver only, would give an average return of 95 cents an ounce, but a part of this return is for other metals. We may, therefore, fairly infer a cost of about 40 cents and a sale at about 80 cents an ounce of silver—a little more or less.

The recent product of this mine has been about twelve million ounces a year, but in 1895 a severe fire and the temporary "pinching out" of a large vein—since opened again to its former production—reduced the product to a little over ten million ounces for the year ending November 30; but as greatly improved processes of treating the ores are enabling the company to reduce the cost of production at every point, the directors express themselves well satisfied with a profit of £329,602 on a selling price in London of 2s. 8d. per ounce, or sixty-five to sixty-six cents, which is the present price.

From this profit for six months the 101st cash dividend was declared, adding £288,000 to the previous cash dividends, so that the stockholders have received in eight years £5,752,000 in cash=$27,954,720. In addition, bonuses and stock at nominal value carry the returns to the stockholders up to £8,160,000, or £1,000,000 a year on the capital of £384,000.

The directors present statements of new ore land added by purchase, new processes adopted and improved machinery applied. While the fire and some slips in one mine tend to a temporary reduction in the average product, they show good reason to expect to renew and maintain the previous product of bullion, and on an advance in price to add heavily from low grade ores now laid aside in stock for such improved conditions.

The Broken Hill Mine is believed to yield the largest production of silver; next come the Anaconda of Montana and the Huanchaca of Bolivia, the latter owned mainly by English capital, the former lately said to have been sold in large part, if not wholly, also to English bankers. These three mines may be assumed to supply about a third or more of the increasing annual product of silver bullion, now 175,000,000 ounces, at a cost delivered in London of less than 50 cents an ounce.

Messrs. Newlands and Bryan offer to these producers of bullion, among others, to manufacture silver dollars for them without charge, and to delegate to them by act of Congress the power to force the silver which costs them fifty cents (50 cents) an ounce or less upon this community at the rate of one dollar and twenty-nine cents ($1.2929) per ounce. That is what 16 to 1 means.

In presenting the case of the Silver party, Mr. Bryan refers to the profits on this undertaking as a mere incident to which no regard should be given.

Assuming that the Broken Hill Mining Company of New South Wales will produce 12,000,000 ounces of silver bullion at a cost of 40 cents, more or less, an ounce in 1897, or $4,800,000, Messrs. Newlands and Bryan offer their services and their influence with all the power of legislation to bring the value of this bullion to $1.29 per ounce, or $15,480,000, and to compel the people of this country to pay a profit to the Broken Hill Mining Company in 1897 of $10,680,000, as a mere incident.

Of course I express no opinion as to the ability of Messrs. Newlands and Bryan, backed by a Congress of their confederates, to accomplish this purpose. I only wish to point out that this is but one incident, affecting only 15 per cent. of the total product of silver, in the undertaking which they have declared in the plainest terms to be the object of their campaign, namely, to raise the price of silver bullion to $1.2929 per ounce. It is in order to carry out this purpose that Senator Jones, chairman of the committee of the Populist Silver party now masquerading under the name of Democratic, makes a frantic appeal for funds.

I may venture to suggest to Senator Jones that a net profit of $10,000,000 would probably satisfy the Broken Hill Mining Company, and that the directors would doubtless be glad to place the odd $680,000, even in British gold, at the disposal of Messrs. Newlands, Bryan and himself in order to enable them to attain their end. Perhaps Senator Jones will apply. The London office is at No. 3 Great Winchester Street, E. C. Mr. Douglas Petrie is the secretary.

With this statement I submit the silver miner's case to your readers.

EDWARD ATKINSON.

Boston, August 27.

EX-GOVERNOR FLOWER ON THE MONEY ISSUE.

It is scarcely necessary to refer to the circumstances which lend a special interest to the speech of ex-Governor Flower of New York, as the temporary chairman of the Indianapolis Convention. Mr. Flower has been for some time an active factor in politics, but his entry into the political arena was owing mainly to his standing as a business man, specially connected with financial interests, and he has always remained in close touch with the business community. He has always manifested an independent spirit while in office, and his disregard of temporary popularity, where essential and overriding interests were concerned, has been emphatically declared in the past. Moreover, his attitude as a leader of his party for years, who now finds it impossible to follow the new departure initiated at Chicago, renders his declarations on the great issue now before the people of par-

ticular interest. Apart from these considerations, however, the speech is deserving of attention by reason of its clear statement of some of the facts which go to demonstrate the fallacy of the free-coinage doctrines advocated, particularly from the historical point of view.

Governor Flower declared his confidence in the patriotism of the people, and said that, bad as the times are, stagnant as industry is, distressed as many homes are for lack of employment, the common sense of the American people will not be deceived by appeals to passion, but will perceive clearly what is the truth, namely, that present conditions are largely caused, not by the influences against which Mr. Bryan in lurid words declaims, but by fear of the very remedies which he suggests. When this great shadow which he and his associates have created passes off the surface of the financial and industrial world, he continued, then confidence will be restored, money will seek investment, factories will be reopened and employment will be secure. There can be no prosperity without confidence, and Mr. Bryan's plan shatters confidence and portends business failures and panic. These mean more men out of employment, more homes without food and clothing, more misery and distress.

Regarding the sneers of Mr. Bryan and his supporters against foreign gold, the ex-governor said that the fact remains that without it the building of our great railroads, the opening of our great farm areas, the development of our mines, the building up of our industries, with all the stimulus to prosperity which these have given, would have been delayed many years. Foreign gold—to Mr. Bryan's distorted vision and demagogic mind a species of yellow fever—what is it, Mr. Flower said, but capital which gives work and wages to our citizens, adds to the product of our factories, makes necessities out of the former luxuries of life, increases the comforts and conveniences of living, adds to our country's wealth and prosperity, until finally we will be rich enough and prosperous enough to send part of our capital to other less fortunate or advanced nations and perform the same good mission, selfish though it be, for other people. The withdrawal of European capital would, he said, still further depress values and encourage panic. So large a proportion of our business is done on credit, and credit is such a slender support, that when credit is attacked it matters not how much money there may be in the country, it will avail nothing to prevent the contraction of loans and the refusal of accommodation. These mean business failures, losses, sacrifices of prices, diminished demand for commodities, closing mills, lack of employment, poverty and distress. Against the progress of this certain series of events, Mr. Flower said, no man nor measure can stand. No kind of relief is efficacious except the conviction of the people that the money which measures the exchangeable value of their commodities and services and underlies the structure of their system of credit is sound and stable and will remain so.

Touching the fall of prices and the arguments deduced therefrom by the free-coinage men, Mr. Flower said that by reason of perfectly simple causes the prices of wheat and corn and other agricultural products have declined, but this decline is attributed by these political quacks to the demonetization of silver, and the farmer, along with every other man who finds it hard to make both ends meet, is told that by remonetizing silver wheat will go to a dollar a bushel, and other farm products will rise proportionately. If this were true, he continued, rising prices would affect the commodities which a farmer buys, the interest he pays on his debts, the freight rates which determine the cost of getting his products to market, and he would be relatively no better off than before. To expect the farmer to accept so great a delusion is to presume upon his intelligence. "Ask the farmers of my state," he said, "why they are giving up the production of wheat and corn, and they will not tell you it is because of the depreciation of silver. They will point to these great western prairies and tell you they cannot compete with these in the growth of the staple cereals. And they have taken to raising other crops which are more profitable and less competitive. The same tendency is manifest throughout the agricultural world. Not only have thousands of acres of western lands in America been thrown open to cultivation within recent years, but in Russia, India and the Argentine Republic railroads and enterprise have brought large additional acreage under cultivation and poured millions of additional bushels upon the markets of the world. The same cheapening in the cost of boots and shoes, of hats and coats and other clothing, which has followed excessive production in the manufacture of those articles, has been manifest in the excessive production of agricultural products. It is the old familiar law of supply and demand. In my state of New York hay is selling at $15 per ton; last year it was $10 per ton. Do our silver friends attribute that to the demonetization of silver? They ought to if they wish to be consistent. Silver dollars in the pockets of the mine owners are of no benefit to western farmers. What they want is prosperous conditions which will put silver dollars in their own pockets—dollars which, when taken out, will buy just as much as gold dollars."

But, he continued, however much the prices of agricultural products have declined they have not declined more rapidly than the necessities which the farmer buys, nor so rapidly as the freight rates which promote the market for his products. The report of the National Board of Trade shows that the average charge for carrying a ton of freight one mile on thirteen of the most important railroads of the United States has fallen from 3.08 cents in 1865 and 1.81 cents in 1870 to .76 cents in 1893. You will thus see that in 1865 it cost $30 to transfer one ton 1,000 miles and only $7.50 in 1893. In 1872, according to government reports, the price of transporting one bushel of wheat from Chicago to New York by lake and canal was $24^{47}/_{100}$ cents; by lake and rail, 28 cents; by all rail, 33½ cents. In 1895, by lake and canal, $4^{11}/_{100}$ cents; by lake and rail, $6^{95}/_{100}$ cents; by all rail, $12^{17}/_{100}$ cents. No such proportionate reduction has been seen in the price of wheat or corn. The average price of wheat in 1870 was 80 cents per bushel in gold. To-day it is 56 cents—a reduction since 1870 scarcely half as great as the reduction of freight rates—Mr. Bryan's assertions to the contrary notwithstanding. The Atlantic cable has produced the same result as regards the rate of interest on money that the opening of new lands, the extension of transportation facilities, and excessive production have produced in the prices of wheat and corn. It taps the money supply of the world and brings it to our service.

In reference to the fall of interest rates the ex-governor said further: "Our silver friends claim that the gold dollar has gone up to 200, while silver has neither gone up nor down. I answer that in 1873 the governmental rate of interest was 6 per cent.; the rate in any of the western cities was from 1 to 2 per cent. per month, and money was hard to get at that. By this same Atlantic cable, reaching to money in England, Germany and Holland, the rate of interest on our government bonds has been reduced to from 3 to 3½ per cent., and the rate of interest in western cities does not exceed from 6 to 8 per cent. per annum, and good mortgages have been made in Chicago at 5 per cent. The Atchison, Topeka & Santa Fé Railroad, the Burlington & Quincy, the Pennsylvania, all had bonds twenty-five years ago bearing from 7 to 10 per cent. per annum. Who paid that interest? The farmer when he paid his freight. The rate of interest to-day with these bonds placed in London and in Europe is on average 4 per cent. per annum, so that the man who had gold to loan in this country or Europe in 1873 could get nearly double the rate of interest per annum that he can get to-day. Is not the value of the gold dollar regulated by the price that you can get per annum for it? If this is the case, then the price of the gold dollar is not 200, as our silver friends claim, but has been reduced by one-half because it will only bring to the owner about one-half of what it did twenty-five years ago. There is a natural reason for this reduction in the price of gold. Why, last year the world produced over $200,000,000 of gold, nearly one-fourth of which was produced in the United States, and the production is steadily increasing year by year. Now this $200,000,000 amounts to $27,000,000 more than all the gold and silver produced in the world in 1873."

Finally, referring to the condition of the laboring man under the gold standard, Mr. Flower said that while in 1870 the average wages paid to laborers were $302 per year, in 1890 these had increased to $485, more than 50 per cent., while during the same period the prices of commodities had fallen, the silverites tell us, from 25 to 40 per cent. Under the operation of a gold standard, therefore, no matter what its injuries may have been to other classes of citizens, the laborer is at least 75 per cent. better off than he was in 1870. The address of ex-Govenor Flower is one of the most important contributions to the currency discussion thus far made, and it deserves a wide publicity.

THE TREASURY BALANCE SHEET.

Government receipts for the month of August amounted to $25,562,096.51, which represents a decrease of nearly $3,500,000 as compared with the preceding month, and of nearly $3,400,000 as compared with the corresponding month of last year. During the month of August the customs receipts showed an excess over the receipts from internal revenue, whereas the internal revenue receipts exceeded those from customs during the month preceding. The excess, however, is less than it was in August, 1895. The expenditures for the month amounted to $35,701,676.65, which represented a decrease of over $6,300,000 as compared with those for the preceding month, but an increase of over $3,100,000 as compared with the corresponding month of the preceding year. The principal item of increase in expenditures as compared with August, 1895, was one of over $4,100,000 in civil and miscellaneous expenditures. The principal item of decrease was one of $2,000,000 in expenditures on account of the War Department. The expenditures on account of interest showed an increase of over $1,000,000.

The government receipts for the two months which have elapsed since the beginning of the fiscal year amounted to $54,591,305.84, which represents a decrease of over $3,400,000 as compared with the corresponding period of the preceding fiscal year. The customs receipts for the two months exceeded those from internal revenue by not quite $1,800,000, whereas the customs receipts exceeded those from internal revenue by over $4,600,000 during the corresponding period of 1895. The miscellaneous receipts showed an increase of over $600,000 as compared with the corresponding period of last year.

Expenditures for the two months amounted to $77,790,144.70, which represents an increase of over $6,600,000 as compared with the corresponding months of 1895. The most marked change was under the head of civil and miscellaneous expenditures, where there was an increase of over $6,400,000 as compared with the corresponding period of the fiscal year 1895–96. There was a decrease of nearly $2,200,000 under the head of war expenditures, but an increase of over $1,200,000 under the head of the navy. The other changes were of minor consequence, comprising an increase of not quite $500,000 in interest, one of over $400,000 on account of pensions, and one of over $200,000 on account of Indians. The expenditures exceeded the receipts for the two months by almost $23,200,000, whereas last year the expenditures for the same period exceeded the receipts by a little over $13,100,000.

THE SOUTHERN RATE SITUATION.

Reference was made some weeks ago in these columns to a novel application of the principle of injunction and the exercise of the powers of the United States courts for the protection of property under its care and in the hands of its receivers from exaggerated competition in rates. This took the form of an injunction obtained by the Port Royal & Augusta, one of the cast-offs of the old Central Railway of Georgia system, and which is in the hands of the United States Court for the Carolinas district, against the Southern States Freight Association, the Seaboard Air Line and the Southern Railway restraining them from putting into effect a proposed reduction of 80 per cent. in rates on competitive through business. The matter was fully discussed at the time and need not be further rehearsed. The important development this week is that on full argument the court has dissolved the injunction, reversing the position which it took at the outset, and apparently overturning the expectation that had been created in railway circles that the courts had thus provided a remedy against rate-cutting outbreaks, at least where a road in the hands of receivers was involved. The full text of the decision will be awaited with interest, though under the circumstances it is doubtful whether the doctrine set up when the preliminary injunction was granted will be pursued further. Railroad sentiment has not been at all unanimous as to whether the establishment of such a principle by the courts and their exercise of it would be altogether a blessing to the railroads, even if it would tend to suppress rate-cutting and to bring about that steadiness of tariffs that is the great object for

which careful managers in every part of the country are constantly (and more or less unsuccessfully) striving.

As to the immediate effect on the southern rate war the action of the court, of course, puts the entire matter in *statu quo*. The Southern Railway and the Seabord Air Line, the chief contestants, have not abandoned their fighting even in the face of the injunction. Their steamboat lines, not being affected by the injunction, have been used to keep up the rate-cutting, and, now that there is no further restraint upon them, a furthur vigorous conflict is not unnaturally expected. It is, however, gratifying to note that some of the security-holders of the companies involved have taken due notice of the peril to their interests involved in the continuance of competition, in which cuts of from 33 to 80 per cent. in rates have been among the chief incidents. In this, as in other cases, there is every reason for the investor and bondholder to take active steps, though whether in this case they will take the form of further application to the courts for the protection of vested interests remains to be seen.

AUGUST'S SMALL BANK CLEARINGS.

The August total of bank clearings is the smallest reported in any month for nearly two years, it being necessary to go back to February, 1895, to find a smaller total. Compared with July the falling off is fully 19 per cent., and with February, when the smallest total hitherto reported this year was recorded, the decrease is more than 13.6 per cent. Total clearings for August aggregate only $3,526,416,248, a falling off from August a year ago of 14.2 per cent., a decrease of four-tenths of 1 per cent. from August, 1894, and a gain of only 5.4 per cent. over August, 1893, during which month and the month of September following clearings reached the low-water mark, reached after the panic of 1893.

The following table of percentages of increase and decrease during the first eight months of the past four years will be found interesting:

	1896.	1895.	1894.	1893.
January	Inc. 4.8	Inc. 8.4	Dec. 31.9	Inc. 4.8
February	Inc. 20.3	Inc. 6.3	Dec. 36.9	Dec. 2.7
Two months	Inc. 11.7	Inc. 7.4	Dec. 34.0	Inc. 1.2
March	Inc. 2.2	Inc. 7.4	Dec. 30.7	Inc. 2.1
Three months	Inc. 8.4	Inc. 7.4	Dec. 33.0	Inc. 1.4
April	Inc. .9	Inc. 14.2	Dec. 25.0	Dec. 3.0
Four months	Inc. 6.4	Inc. 9.1	Dec. 31.0	Inc. .5
May	Dec. 13.0	Inc. 25.0	Dec. 26.3	Inc. 4.6
Five months	Inc. 1.9	Inc. 12.5	Dec. 30.2	Inc. 1.2
June	Dec. 2.4	Inc. 22.4	Dec. 20.8	Dec. 8.1
Six months	Inc. 1.1	Inc. 16.5	Dec. 28.1	Dec. .2
July	Dec. 4.4	Inc. 29.8	Dec. 15.4	Dec. 10.5
Seven months	Inc. .3	Inc. 16.2	Dec. 27.2	Dec. 1.6
August	Dec. 14.2	Inc. 16.1	Inc. 5.9	Dec. 25.8
Eight months	Dec. 1.4	Inc. 16.2	Dec. 24.4	Dec. 4.2

The decrease of 14.2 per cent. in August this year from a year ago followed a gain of over 16 per cent. in 1895 over 1894, the latter month in turn showing a gain of nearly 6 per cent. over August, 1893.

The showings made by the various groups of clearing-house cities during August and the first eight months of the year compare with preceding months as follows:

	May, 1896.	*June,* 1896.	*July,* 1896.	*August,* 1896.	*Eight mos.* 1896.
New Engl'd	Dec. 8.4	Dec. 2.4	Dec. 10.2	Dec. 18.6	Dec. 4.1
Middle	Dec. 16.0	Dec. 3.2	Dec. 2.8	Dec. 14.9	Dec. 1.2
Western	Dec. 9.5	Dec. 4.4	Dec. 8.9	Dec. 13.2	Dec. 3.9
Northwestern	Dec. 4.1	Inc. 4.5	Dec. 4.2	Dec. 11.6	Inc. .3
Southwestern	Dec. 15.9	Dec. 7.2	Dec. 9.5	Dec. 9.9	Dec. 5.6
Southern	Dec. .6	Inc. .1	Dec. 1.6	Dec. 5.8	Inc. 4.2
Far-western	Dec. 2.7	Dec. 4.1	Dec. 7.7	Dec. 7.1	Inc. 1.2
Totals	Dec. 13.0	Dec. 2.4	Dec. 4.4	Dec. 14.2	Dec. 1.4
Canada	Dec. 6.3	Dec. 9.5	Dec. 4.4	Dec. 8.5	Dec. 2.4

Every group of cities showed a decrease in August clearings from a year ago. This was heaviest in the New England and middle states groups, where the decreases were respectively 18.6 and 14.9 per cent., and was smallest in the southern group, where the decrease was 5.8 per cent.

In examining detailed reports by cities it is found that 17 of the 82, which compare with August a year ago, or about one-fifth, show increases. One-third of these increases are to be found in the northwestern group, in which a year ago the poorest results were shown as a result of the falling off in the spring wheat yield of two years ago. With the exception of Omaha, which increased 7.2 per cent., the gains shown, however, are slight. In the south, New Orleans, Atlanta and Augusta show gains, the heavy grain movement at the first named port probably accounting for most of the increase shown, namely, 4 per cent. The heaviest increase shown in any city is that of 25 per cent. reported by Augusta.

The list of decreases numbers most of the leading cities of the country. New York shows a decrease of 14.8 per cent., Boston of 19.2 per cent., Philadelphia 17 per cent., Chicago 13 per cent., St. Louis 6 per cent., Baltimore 8 per cent., and San Francisco of 6.6 per cent.

The total clearings of 66 cities for the eight months ending August 31 aggregate $33,361,195,647, a decrease of 1.4 per cent. from last year, a gain of 14.5 per cent. over 1894, but a decrease of 13 per cent. from 1893. Only three groups of cities show gains over a year ago, the southern cities leading with an increase of 4.2 per cent., the far-western following with 1.2 per cent. gain, and the northwestern group next with a gain of less than half of one per cent. Decreases are heaviest in the southwestern group, where the falling off is 5.6 per cent.

BANK CLEARINGS AT 88 CITIES FOR AUGUST, AT 82 CITIES FOR THE MONTH AND FOR EIGHT MONTHS THIS YEAR AND LAST, AND AT 73 CITIES FOR FOUR YEARS.

WHEAT STOCKS AT A STANDSTILL DURING AUGUST.

The only present hope for strength in wheat prices lies in a continuance of the existing full and steady export movement, for relative scarcity is very unlikely to have any special influence whatever.

Totals of stocks of wheat available, both coasts of the United States, together with those in Canada, on September 1, as reported to BRADSTREET'S, are contrasted with those on like dates in preceding years as follows:

	East Rockies.	*Pacific coast.*	*Totals.*
September 1, 1896	57,588,000	3,512,000	61,100,000
September 1, 1895	44,732,000	8,799,000	53,531,000
September 1, 1894	79,826,000	8,532,000	88,358,000
September 1, 1893	64,333,000	6,114,000	70,447,000
September 1, 1892	42,875,000	3,589,000	46,464,000
September 1, 1891	25,048,000	3,403,000	28,451,000
September 1, 1890	22,689,000	5,021,000	27,710,000
September 1, 1889	20,860,000	7,033,000	27,893,000

East of the Rocky mountains available stocks of wheat here and in Canada amounted to 57,588,000 bushels on September 1, nearly 13,000,000 more than were so held one year ago, but 22,000,000 bushels less than on September 1, 1874, and nearly 7,000,000 less than on that date in 1893, at which periods exceptionally heavy supplies were reported.

On the Pacific coast the reverse is shown, with total supplies of only 3,512,000 bushels on the 1st inst., compared with 8,799,000 bushels one year ago, 8,532,000 bushels two years ago, and 6,114,000 bushels three years ago. Combining supplies on both coasts, American and Canadian wheat stocks amounted to 61,100,000 bushels on September 1, or 7,500,000 bushels more than one year ago, and 14,600,000 bushels more than on the like date in 1892. As contrasted with September 1, 1895, available supplies here and in Canada on the 1st inst. show a decrease of 17,258,000 bushels, and compared with September 1, 1893, a decrease of 9,347,000 bushels.

Strange as it may seem, European importers of wheat have been taking less and less of the surpluses of wheat-exporting countries. They have been following the habit, prevalent in so many lines, of permitting the producer to carry stocks.

The total quantities of wheat available

for immediate distribution in the United States and Canada, both coasts, plus the quantities afloat for Europe from all exporting countries, on September 1, added to available stocks in Europe, as reported to BRADSTREET'S, are as follows:

	East of Rockies.	*Pacific coast.*	*Europe and afloat.*	*Grand total.*
September 1, 1896.	57,588,000	3,512,000	35,976,000	97,076,000
September 1, 1895.	44,732,000	8,799,000	65,968,000	119,499,000
September 1, 1894.	79,826,000	8,532,000	63,264,000	151,622,000
September 1, 1893.	64,323,000	6,114,000	78,960,000	149,407,000
September 1, 1892.	42,875,000	3,589,000	64,552,000	111,016,000
September 1, 1891.	25,548,000	3,403,000	58,400,000	86,851,000
September 1, 1890.	22,689,000	5,021,000	41,472,000	69,182,000
September 1, 1889.	20,860,000	7,033,000	45,975,000	73,868,000

Including European available supplies of wheat, plus quantities afloat for Europe from all countries, the world's so-called stocks of available wheat are found to be only 97,076,000 bushels, a smaller quantity than was similarly held on like dates in four preceding years, but a larger total than was reported on September 1, 1891, and on like dates in preceding years. Thus the most bullish aspect of the statistics of the world's available supplies of wheat lies in the willingness of European customers of American, Indian, Russian, Argentine and Australian wheat producers to buy for nearby needs only.

In August the net increase in domestic and Canadian wheat supplies was 769,000 bushels, due to early shipments of new wheat on the Pacific coast. In August, 1895, the movement showed a net decrease of only 86,000 bushels for both coasts. But in 1894 the August gain was heavy, 13,468,000 bushels.

For the two months of the current cereal year which have elapsed the wheat movement here and in Canada decreased 3,766,000 bushels east of the Rocky mountains, while on the Pacific coast the two months' increase was 1,585,000 bushels, leaving a net gain of wheat supplies in sight from July 1 to September 1, 1896, of 2,181,000 bushels, as compared with a net loss in the like period of 1895, a gain of 14,855,000 bushels in 1894, and of 12,205,000 in 1893.

The exhibit of totals of wheat available in the United States, Canada and Europe, and those afloat for Europe, at monthly intervals for the past seven years, makes it plain that the world's wheat supplies did not change materially during August, 1896, the aggregate reported being 97,076,000 bushels on September 1 and 97,131,000 bushels on August 1. Nominally, therefore, there was a slight decline in the world's visible wheat during August. One year ago there was a moderate increase during that month, and two years ago the August increase was more than 9,000,000 bushels. Aggregate wheat stocks here and abroad, as given herewith, are the smallest reported for any month since September 1, 1891.

* Decrease. † Increase.

AMERICAN RAILROADS IN 1895.

The annual issues of the Messrs. Poor's standard statistical work upon the railway systems of the United States have always appeared with commendable promptness. That for the current year is now coming from the press, and the introduction thereto, of which advance sheets have been furnished, contains as usual a considerable amount of statistics of no small value. The work in question is of particular interest at this juncture, because the statistics collected by the Messrs. Poor in relation to the railroads and their tonnage and earnings is the only complete record of the kind running back for some twenty-five years, and thus affording conclusive evidence as to the way in which railroad rates have kept pace with the downward tendency of prices. These facts have recently been called in question in connection with the current discussion of currency and economic questions, and it is to the authority to which this refers that financial and business public looks for decisive information on points of this kind.

The summary of statistics of our railroads for the fiscal year included in the current volume of the publication indicate, it is hardly necessary to say, a rather stationary condition. The miles of railroads operated in the United States in 1895 was 179,162, against 176,229 in 1894, an increase of 2,933 miles, or 1.66 per cent. The total mileage in existence at the close of last year was 180,955, of which 1,922 miles were constructed during 1895. It is also to be noted that fifty-nine large companies own no less than 77,209 miles, and control and operate in all some 110,000 miles of lines, or more than 60 per cent. of the total mileage of the Union. The whole number of roads included in the tabulation (179,887 miles) represent a capital stock aggregate of $5,231,373,852; their funded debts are given as $5,712,052,517, and their other debts as $419,558,711. The increase in share capital for the year was $106,492,929, or at the rate of 2.1 per cent.; the augmentation of funded debt was $35,166,803, or about five-eighths of 1 per cent., and the cost per mile of roads, making the returns as measured by their bonds and stocks, was $60,188 per mile, against $62,140 in 1894.

The aggregate traffic statistics are shown in the following tabulated form:

	1895.	1894.	*Increase or decrease.*	*Rate of incr'se or decrease.*
Miles operat'd	179,162.18	176,229.11	2,933.07	+ 1.66
Tons, freight	763,799,833	674,714,747	89,085,086	+ 11.72
Freight m'lge	88,567,770,801	82,219,900,498	6,347,870,303	+ 7.72
Pasgrs. carri'd	543,974,263	583,248,007	*39,273,744	— 6.73
Pasgr. mile'ge	12,642,202,551	13,600,531,635	*958,329,084	— 7.05
Earnings.				
Freight	$743,784,451	$700,477,409	$43,307,042	+ 6.18
Passenger	261,640,598	276,031,571	*14,390,973	— 5.21
Miscellaneous	87,714,543	91,134,533	*3,419,990	— 3.75
Total gross	$1,093,139,605	$1,067,643,513	$25,496,092	+ 2.39
Net	323,196,454	317,757,399	5,439,055	+ 1.71
Ton per mile	0.839%	0.864%	0.025%	+ 2.89

* Decrease.

Taking the total investment represented by all the stocks and bonds of the roads reporting, $11,362,985,080, the gross earnings are about 9.7 per cent. on the investment, and the net earnings only equal 2.9 per cent. on the whole sum. In 1880, when the capitalization of the railroads in the United States was $5,400,000,000, their gross earnings of $613,733,000 were 11 per cent. of the capital represented by bonds and stocks, and their net earnings of $255,557,000 were equivalent to 4.7 per cent.

A very interesting feature of this issue of the *Manual*, and one of great and increasing utility to investors, is the portion devoted to street railway systems. The total length of these lines in the United States equals 15,956.13 miles, against 13,176.38 miles in 1895, the latter being an increase of 3,514.32 miles over those in operation in 1891, so that in five years there have been built 6,294.07 miles of city and suburban tramway lines. It is impossible, the editors of the *Manual* state, owing to the meager information furnished by many companies, to supplement this statement of mileage with complete or satisfactory statistics of the equipment, capitalization or operations of the street railroads of the country. Such returns as have been received have, however, been totalized with the result of showing an equipment of 28,154 passenger cars, 20,777 motor cars, 206 dummies and 28,621 horses. The rapid substitutions of electric traction for animal power may be judged from the fact that since 1891 the number of horses employed in the street railway service has declined 162,000, or about 80 per cent. Of the 15,956.13 miles of street railways in operation, companies operating 530.71 miles failed to supply complete statistics of capitalization, either as to stock, bonds, or both. The capitalization of the remaining 15,425.42 miles is therefore shown to be $828,547,285 stock and $525,949,928 bonds, an average of $53,713 per mile of stock and $34,096 per mile of bonds, equal in the aggregate to $87,809 per mile of stock and bonds, as against an average of $60,188 per mile for steam railroads.

The increasing interest and importance of industrial and miscellaneous companies to the financial and speculative world is duly recognized by the increased spaces devoted in this number of Messrs. Poor's work to corporations of that kind, including in the statements given therein nearly all such that are known on the leading stock markets. At the close of 1894 the capital investment in the miscellaneous corporations whose statements were published in the *Manual* for 1895 (pages 1132 to 1193, inclusive) equaled $1,493,543,256, represented by $1,183,560,042 in their capital stocks and $309,983,214 in their bonds. During the year 1895 two of the companies—the Distilling & Cattle Feeding Company and the United States Cordage Company—whose combined capital amounted to $69,000,000 in stock and $8,500,000 bonds, were replaced, through reorganization, the former by the American Spirits Manufacturing Company and the Spirits Distributing Company, and the latter by the Standard Rope & Twine Company, the combined capital investment, as reorganized, amounting to $54,350,000 in stock and $12,500,000 in bonds. And there were added in the same year statements for eight corporations not previously noticed whose combined capital amounts to $38,079,950 in stock and $23,270,800 in bonds. The combined share capitals of the corporations whose statements are published in the *Manual* amount to $1,243,280,491 and their bonds to $346,030,666, an aggregate of $1,589,311,157, an increase of $59,720,449 over those shown in 1894, or about 6.45 per cent.

DISCRIMINATION UNDER THE SHORT-HAUL CLAUSE.

One of the latest rulings of the Interstate Commerce Commission is to the effect that, under the fourth section of the act to regulate commerce, a carrier is not justified in charging more for the shorter than for the longer distance by competition at the longer distance point of other carriers which are themselves subject to the act, in the absence of authority from the commission, under the proviso clause of that section. The cases in which the decision was rendered were instituted by complaints filed by the Board of Trade of the city of Lynchburg, Va., and a number of firms, against the Old Dominion Steamship Company and the Norfolk & Western Railroad Company and other roads and officials thereof. The substance of the complaints was that the defendants unlawfully charged and collected greater compensation in the aggregate for the transportation, under substantially similar circumstances and conditions, of like kinds of property from the city of New York or the city of Boston, for the shorter distance to Lynchburg, Va., than for the longer distance over the same line, in the same direction, to Knoxville, Tenn., the shorter being included within the longer distance in each case. It was further alleged that by such adjustment of transportation charges the rates to Lynchburg were made unjust and unreasonable, and that undue and unreasonable preference was thereby given to the city of Knoxville.

It appears from the statement of the commission in summing up the facts of the case that for a long time prior to the summer of 1894 the defendant carriers which were engaged in the transportation of property from the cities of New York and Boston and other points on the north Atlantic seaboard to Lynchburg, Va., and Knoxville, Tenn., had maintained rates on classified traffic which appeared to be relatively reason-

able as between those destinations. Under this adjustment charges to Lynchburg averaged about 50 per cent. of the charges to Knoxville. About June 1, 1894, the carriers made a great reduction in rates to Knoxville without changing the rates to Lynchburg. Under the schedules then put in force traffic was carried to the more distant locality at about 70 per cent. of the charges maintained for the shorter haul. This disproportion continued until August 1, 1894, when the old Knoxville rate was restored, and from that time rates to both places were the same as before the reduction to Knoxville.

In rendering its decision, which was against the defendants, the commission cited a decision by it in an earlier case—Trammell vs. Clyde Steamship Company—in which it held in substance that a given carrier is not justified in charging more for shorter than for longer distances by the competition at the longer distance point of other carriers which are themselves subject to the act to regulate commerce, in the absence of authority from the commission under the proviso clause of the fourth section. In such a case, the commission said, the "circumstances and conditions" are not deemed to be dissimilar, and the higher charge for the shorter distance is unlawful. The various decisions of the federal courts which have since been rendered contained nothing, the commission said, to discredit the correctness of this proposition or in conflict with the argument by which it was supported, and while further adjudication may be at variance with this view of the fourth section in the present state of the law, there was no reason for denying its application to the controlling question in the cases before it. The sole excuse for the extraordinary reduction in rates to Knoxville was, the commission continued, the prior reduction in rates to that point by other carriers which were themselves plainly subject to the act to regulate commerce, but in no case could this be deemed a sufficient justification without the authority of a relieving order from the commission, and to hold otherwise would be not only to abandon the construction of the fourth section which we have deliberately adopted, but to leave its proviso clause meaningless and inoperative.

The commission further held that the fact that the Lynchburg rate was per se reasonable did not disprove the charge that it was unlawful. If, it continued, rates are relatively unjust, so that undue preference is afforded to one locality or undue prejudice results to another, the law is violated and its penalties incurred, although the higher rate is not in itself excessive. Such a rule, it said, should certainly apply where, as in these cases, a given relation in rates—long continued and concededly equitable—is suddenly and almost completely reversed, merely because other carriers to the longer distance point have disregarded their legal duty. The commission in fine concluded that the maintenance of usual rates to Lynchburg, while much lower rates were allowed to Knoxville, was clearly unwarranted; that it was a disobedience of the law which was not excused or condoned by the similar wrongdoing of other carriers in respect of their Knoxville rates; that the Lynchburg dealers were entitled to rates not greater than those accepted at the same time on like traffic to Knoxville, and that the excess paid by them above contemporaneous rates to the latter place was unlawfully collected.

THE SOUTHERN RAILWAY'S YEAR.

The Southern Railway's annual report, covering the operations of the company for the year ending June 30, 1896, is in some respects a model document. While not as full in matters of detail relating to the finances and physical operations of the system as the reports of the Pennsylvania Railroad, for instance, it is still satisfactory in all respects. Leaving no legitimate ground for complaint on the part of stock and security holders or of the financial public as to the frank exposition of the company's affairs, a document of this kind serves to emphasize the great reform that has been slowly effected in railroad reporting and the abandonment by nearly all respectable railroad managements in this country of the former policy of concealment, in which the presentation of meager and unsatisfactory reports was a leading customary feature.

The summarized statement of the Southern Railway's revenues and expenditures for the year just ended contrasted with the same items for the fiscal year ending June 30, 1895, gives the following comparisons:

Year ending June 30.	1896.	1895.	*Changes.*
Gross earnings	$19,082,247	$17,114,791	Inc. $1,967,456
Expenses and taxes	13,451,448	12,062,854	Inc. 1,388,594
Net earnings	$5,630,799	$5,051,937	Inc. $578,862
Other income	188,508	89,677	Inc. 98,831
Gross income	$5,819,307	$5,141,614	Inc. $677,693
Interest, rentals, etc	5,2 2,829	4,245,870	Inc. 1,016,959
Surplus	$556,478	$895,744	Dec. $339,266

The general results of the year confirm the impression that the reorganization of the old Richmond Terminal, Richmond & Danville and East Tennessee lines under the style of the Southern Railway was based on prudent and far-sighted ideas, and that the management of the properties has since been attended with the full measure of economy that was aimed at in the plan. While the market values of the securities of the new company have not, as yet, in all respects justified the sacrifices which the holders of the old bonds and stocks were called on to make, results such as are here presented furnish not only a full justification of the steps that were taken by the various interests when the reorganization was effected, but afford legitimate grounds for hope that the future has with the development of southern commerce and industry a still further degree of prosperity in store for the company. At the same time, it must be recognized that the railroad situation in the south is not altogether a satisfactory one at the present moment. Competitive railroad building has produced the same effects there that have in so many cases been seen in the west. It can scarcely be doubted that the rate cutting which has been instituted by the Seaboard Air Line will, with the prevalent business depression, have its effect upon the earnings of the Southern for the current autumn as it has already had during the summer months. This will be reflected in the results of the present fiscal year unless, indeed, wiser counsels prevail among the railroad managers of the south and the disturbance is allayed before it has further harmful results and aggravates a traffic situation that is already, to say the least, difficult.

Returning to the figures of the Southern Company for the year just ended, there are some items that deserve special notice. The fixed charges increase in conformity with the higher rate of interest paid on certain bonds under the sliding scale fixed in the reorganization. It should also be noted that the funded debt is increased nearly $5,000,000 since last year, and the stock outstanding is $4,300,000 larger. This is represented by an increase of $7,517,000 in the securities owned. It is also to be noted that new equipment was purchased during the year to the value of $1,000,000 or more, and that all of this was paid for in cash, while $381,000 old equipment notes were retired, leaving the contracts now outstanding only $577,000.

The most satisfactory feature of the financial exhibit is that the company has no floating debt and has had none since the reorganization. The expenses for the year were 70.49 per cent. of the gross earnings as compared with 71.57 per cent. in 1895, the outlay including a considerable amount of improvements and additions to the property which are not included in the capital account. At the same time there was paid for additions particularly to terminal properties at various points on the line the sum of $758,842, all of which, it is claimed, adds materially to the efficiency of the company's plant. One of the striking features of the report is that only about 15 per cent. of the tonnage of the company was composed of agricultural products, less than 4 per cent. being cotton, while over 40 per cent. was received from mines and mining industries, and over 25 per cent. consisted of the products of manufactories. It is encouraging in connection with southern industries to note that during the year, immediately contiguous to the lines of this company, $4,000,000 have been expended in new cotton mills already finished, and that at the close of the fiscal year, according to the report, additional plants of this character to cost about $2,500,000 were in process of construction.

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

It seems certain that there has never been an electoral campaign in the United States in which the issue of literature bearing on a great question has been so notable as it has been during the present struggle, and as it bids fair to be during the weeks that will elapse before the final judgment of the electorate is taken. In the preparation of this literature no resources are neglected, and the graphic arts are laid under special contribution. The finest specimen of this kind of campaign literature which has come under our notice is a pamphlet entitled "Greenbacks," written by President William C. Cornwell, of the City Bank of Buffalo, and illustrated from designs by the author. The illustrations are of an unusual order of merit, and expense seems not to have been spared in preparing them. The pamphlet itself is an effort to show that the greenbacks, which, in their inception, were fiat money, have been the cause of all our trouble and the source of the silver craze, and that in order to bring about assured prosperity there must be an overwhelming victory for the gold standard this fall and legislation for the retirement of the greenbacks and Treasury notes.

CURRENT BUSINESS NEWS.

Industrial.

Owing to the agitation of the financial question, construction work on the Kansas City, Pittsburgh & Gulf Railroad will be suspended for an indefinite period. This throws 3,000 men out of employment.

A Duluth dispatch says that the Minnesota Iron Company has reduced the forces at the various mines to 400 men, and the wages of all remaining at work have been cut 10 per cent. The company says that it has already mined all the ore it can deliver this year.

A Fall River dispatch says the mills will not start work as was expected. The various mills in the city are free from the provisions of the curtailment agreement. Some of the mills have stopped for a longer time than the agreement called for, but this voluntary extension of the shutdown was due to the weak market, the rise in cotton, and the high rate of interest. That the curtailment will continue seems assured.

The employees of the Rochester (Pa.) Tumbler Works, numbering 1,500, have been informed of a 20 per cent. reduction of wages.

Owing to dull times, Alexander Smith & Son have reduced the wages of the 2,000 operatives in their Yonkers carpet mills 10 per cent.

The Weybosset Mills at Olneyville, R. I., and the mills of the Lonsdale Company (Providence) have started up work.

The Reading Coal & Iron Company has advanced line and city anthracite price 10@15c. per ton, to conform with the 25c. advance recently made in tidewater figures. Chestnut is put up 15c. and other domestic sizes 10c. per ton.

The Turner Worsted Company's mills, of Cleveland, which have been closed down for some time, and which usually employed between 400 and 500 hands, have resumed operations. Nearly all the old hands were put to work at once, and the few who were not will get work in a few days.

The Worcester Cycle Company has shut down for an indefinite period.

The Amory Mills, of Manchester, N. H., have closed for two weeks, throwing out about 1,500 hands.

The American Watch Factory, Waltham, Mass., began work September 1, after three weeks' vacation, with a full number of employees, and will run on full time.

The Nockage Cotton Print Mills, Fitchburg, Mass., started up on Thursday, after a nine weeks' shutdown.

The Woonsocket Rubber Works, of Millville, Mass., will resume business on the 10th instant. These works employ 1,200 hands, and, with the exception of a few weeks the past summer, have been shut down since last January. The Alice Mill, at Woonsocket, R. I., owned by the same company, will start up at the same time.

On Saturday notices were posted at four of the largest coal mines on the Wheeling division of the Baltimore & Ohio Railway informing employees that on and after Tuesday next the mining rate would be 60c. per ton. The present rate is 70c. per ton. The strike of the large number of miners at Cannonsburg, Pa., that has been maintained for several weeks was abandoned Saturday, and it is believed the men will go to work at the reduction. About 2,000 men are affected by the order, which will now probably become general, and will eventually affect wages at every mine in the district.

The blast furnace men at the Riverside Iron Works in Wheeling, W. Va., have been notified of a 20 per cent. reduction in wages. They refused to accept the reduction and quit work, and the plant was shut down. The whole mill, employing 3,000 men, is now idle.

The Cordsville Woolen Mill Company, at Attleboro, Mass., was to start its mills this week in full force and on full time, after a shutdown of four weeks.

The several mills and furnaces of the Lackawanna Iron & Steel Company, at Scranton, Pa., employing nearly 5,000 men, are closed. The mills may not resume work until after election.

Oliver Brothers' Tenth street rolling mill, Pittsburgh, has closed down, throwing several hundred hands out of work. General depression in trade is given as cause.

The Terre Haute & Indianapolis Railroad has issued an order closing its shops at Effingham, Ill.

The Madison Car Works of Madison, Ill., have shut down, throwing half the workingmen out of employment.

Only seven of the nine blast furnaces at the Carnegie Company's Braddock plant are in blast. The report is current that six of the seven are to be banked soon.

Every mill in the steel department of the Edgar Thomson Works of the Carnegie Company, at Braddock, suspended operations indefinitely on Wednesday. Lack of orders is given as the cause for the suspension.

The depression in the Connellsville coke region continues. Of the 17,947 ovens in that region only 7,000 are in blast. "Many of the coke workers are foreigners, and they have commenced an exodus to Europe."

Commercial.

An officer of the Illinois Central Railroad says that never before in the history of the company have the port facilities at New Orleans and other gulf points been so severely taxed as at present. The representative of one of the large steamship brokerage houses states that his firm could fill a dozen more vessels than it can find in the present month at both Galveston and New Orleans. Its vessels now on berth could have been sold at 25 per cent. higher rates had they not been put under charter in advance. At Galveston there are 1,000,000 bushels of grain awaiting shipment as soon as opportunity offers. The railroads are doing their utmost to help out the shippers by allowing delays in the movement of grain in their cars on side tracks.

"It is doubtful if Texas has experienced a more general and damaging drouth in the past thirty years during the crop season," says the report of the Commissioner of Agriculture of that state in commenting on present crop conditions.

Stocks of wheat in St. Louis private elevators September 1 were 814,000 bushels.

The Philadelphia *Press* says: "American manufacturers have been notified during the past few days of an important and valuable concession which has been granted by the Argentine Republic, and which it is expected will assist in stimulating trade with South American countries. The concession gives manufacturers in the United States the privilege of importing their products into that country under bond, free of duty, until sold. All goods must be sent in through the regular ports and may be taken to any city of the republic. If sold the duty is to be paid, and if they are not disposed of the goods can be reshipped to the United States without paying any duty. This concession is the result of a line of policy which the Philadelphia Commercial Museum has been pursuing for a year past. It is the intention of the Museum to secure similar concessions from every country in South America. The Argentine Republic was the second to grant it. The Venezuelan government was the first to issue such an edict. The Argentine law passed that Congress on June 3, and official notification of the action was made to the Argentine minister in Washington on August 20."

Railroads.

The following railroads report gross and net earnings for July:

	—Gross earnings—		—Net earnings—

Total surplus	204,836	182,049	Inc. 22,787

The report of the New York, Ontario & Western to the state commissioners for the year ended June 30 shows:

	1896.	1895.	1894.
Gross	$2,779,335	$3,669,113	$3,842,119
Operating expenses	2,585,908	2,642,412	2,732,541
Net	$1,193,427	$1,026,701	$1,109,578
Prop. expenses to gross	71	72	71⅛
Total income	1,274,892	1,101,791	1,184,668
Charges	899,323	775,407	765,104
Surplus	$375,569	$326,384	$419,564

The Ontario & Western earned net in 1893 $889,940, in 1892 $804,281.

The Fitchburg Railroad reports to the state commissioners for the year ended June 30:

	1896.	1895.	1894.
Gross	$7,335,972	$7,237,724	$6,865,155
Operating expenses	5,462,316	5,202,426	5,038,169
Net	$1,873,656	$2,035,298	$1,826,986
Prop. expenses to gross	74⅛	68⅝	70
Total income	2,144,449	2,035,298	1,859,040
Charges	1,511,723	1,286,455	1,309,691
Balance	$632,726	$748,843	$549,349
Dividends	595,096	681,867	502,000
Surplus	$37,630	$66,976	$47,349

The Fitchburg earned net in 1893 $1,938,825, in 1892 $2,012,027.

Staten Island Rapid Transit reports for year ended June 30:

	1896.	1895.	Changes.
Gross earnings	$764,455	$875,342	Dec. $110,887
Operating expenses	416,543	489,259	Dec. 72,716
Net earnings	$347,912	$386,082	Dec. $38,170
Charges	321,467	326,936	Dec. 5,469
Surplus	$26,445	$59,146	Dec. $32,701
Total deficit	31,515	60,925	Dec. 29,410

The annual report of the West Virginia Central & Pittsburgh Railway Company for the fiscal year ended June 30, 1896, shows the following results:

	1896.	1895.	Changes.
Gross earnings	$612,689	$531,536	Inc. $81,153
Operating expenses	396,790	345,301	Inc. 51,489
Net earnings	$215,898	$186,235	Inc. $29,663
Net from P. & C. Railway	10,633	20,288	Dec. 9,655
Coal mining profit	102,607	83,039	Inc. 19,568
Total net	$329,139	$289,563	Inc. $39,576
Interest on bonds	180,000	180,000	
Depreciation plant, etc.	22,253	4,700	Inc. 17,553
Total deductions	$202,253	$184,700	Inc. $17,553
Surplus	126,885	104,862	Inc. 22,023

The report of the Wabash Railroad Company for the fiscal year ending June 30, 1896, shows:

	1896.	1895.	Changes.
Gross earnings	$12,807,146	$11,959,843	Inc. $847,303
Operating expenses (72.16 per cent.)	9,242,604	8,921,029	Inc. 321,575
Net earnings	$3,564,537	$3,038,8 9	Inc. $525,728

The Manhattan Railway Company reports for the year ending June 30:

	1896.	1895.	Changes.
Gross earnings	$9,256,931	$9,197,571	Dec. $140,540
Operating expenses	5,530,957	5,413,564	Inc. 116,993
Net earnings	$3,725,974	$3,983,907	Dec. $257,633
Other income	232,521	287,135	Dec. 54,614

Surplus	$25,261	*$180,497	Inc. $205,758

* Deficit.

The *Railway Age* gives the following statement of roads in receivers' hands on June 30 last:

	No. roads.	Miles.	Capitalization.
In hands receivers on June 30, 1895	169	37,855	$2,500,000,000
From June 30, 1895, to June 30, 1896	38	5,576	410,000,000
Totals	207	43,431	$2,910,000,000
Sold from June 30, 1895, to June 30, 1896	57	14,437	1,009,899,000
In receivers' hands June 30, 1896	150	29,994	$1,900,101,000

The appointment of a receiver for the Kings County Elevated Railroad Company by the Supreme Court was made on the application of the treasurer of the company for August Belmont & Co. and Vermilye & Co. The reasons given are that the company has a large indebtedness which it cannot meet at the present time, which was caused by unjust taxation by Kings county, and also by a large decrease in receipts of the company, caused by extreme competition of the trolley lines. General Jourdan, the receiver, says: "The receivership is only temporary, and the company will resume in a very short time and will settle all outstanding obligations promptly."

The all-rail east-bound shipments of dead freight from Chicago last week were 63,179 tons, against 58,505 tons the previous week and 56,095 tons the corresponding week of the previous year.

Default was made on Tuesday in the payment of September interest on the Union Pacific Sinking Fund 8s, as the funds received from land sales have not been sufficient to furnish the amount required for the interest.

At the receivers' sale of the Port Royal & Augusta Railroad yesterday at Port Royal, S. C., the road was sold to Thomas & Ryan for $555,000.

Financial.

The following securities were sold at auction this week at New York:

100 Shares New York Mutual Gas Company	201
1,000 Shares Duluth, South Shore & Atlantic Railroad, preferred	51½
1,000 Shares Duluth, South Shore & Atlantic Railroad, common	3½

The New York *Daily Stockholder* presents the following tab'e of dividend disbursements for September for the past four years:

	1896.	1895.	1894.	1893.
Bonds	$410,806,904	$401,695,586	$399,451,084	$455,967,217
Interest	10,131,899	9,941,587	10,057,524	11,994,785
Stocks	414,773,336	367,186,456	385,930,870	381,165,936
Dividends	8,047,584	7,688,348	7,470,240	7,340,843
Total dis.	18,179,469	17,629,937	17,527,773	19,935,628

Government interest and pension payments will bring the total for 1896 up to $25,000,000.

There will be a meeting of the Reading general mortgage bondholders representing the committee which organized in 1894 in New York on the 17th inst. It is supposed "the meeting has some connection with the foreclosure suits."

Miscellaneous.

Judge Thomas, Assistant Attorney-General for the Post Office Department, yesterday decided that "it is unlawful to send an ordinary letter by express or otherwise outside of the mails unless it be inclosed in a government stamped envelope. It is also unlawful to inclose a letter in an express package unless it pertains wholly to the contents of the package."

The expedition of M. Versepuy across Africa is on the way back to Paris. The expedition was composed of Baron de Romans and M. Sporck, an artist, besides its chief, M. Versepuy, and the caravan included 150 natives. It left Zanzibar on July 6, 1895, and by the first week in August, 1896, it had crossed the continent to San Thomé. The French travelers crossed the Nile on January 19 of the present year, reaching Mengo, the capital of Uganda, and from that point they seem to have traveled down the Congo. The most remarkable thing about the expedition was its rapidity.

Foreign.

The Disconto Gesellschaft is at the head of a syndicate formed for the purpose of establishing a new bank in Venezuela, to which institution will be assigned the receipts from the Venezuelan customs. The scheme has for its object the conversion of the internal debt.

Consul Muth, at Magdeburg, in a report to the State Department, says the first reply to Germany in reference to increased sugar bounties comes from Austria, where the consumption tax has been increased from $4.45 to $5.26 per 100 kilos raw sugar net, and the total amount of export bounty to be granted by the government has gone up from $2,023,000 to $3,641,400. The new law went into operation August 1 and lasts one year.

France, for the present, has only increased the duty 68c. on raw sugar and 87c. on refined grades per 100 kilos, to prevent German sugar entering the country to compete with her own product, but she is confidently expected to increase the secret export bounty soon or pay an open bounty to meet German sugar in the world's market.

M. D. Demetriades, Avocat á la Cour d'Appel Mixte, writes to the London *Times* from Alexandria, expressing a hope that the special law for the protection of industrial, literary and artistic property in Egypt, which he hopes Lord Cromer will succeed in securing, will be inspired with equitable principles. There is an endeavor to be made, he says, to introduce into the proposed law a prescription which would force the owner of a trade-mark, under pain of forfeiture, to register it within a given time after the promulgation of said law. Such a disposition he considers eminently retrograde.

An article on the industrial census in Prussia is a leading feature of the London *Labour Gazette* for August. It is pointed out as a remarkable proof of the change which is coming over the economical situation in Prussia that whereas in 1882 the proportion of persons living by agriculture and fishery to the whole population was 43.6 per cent., it appears to have sunk in 1895 to 36.1 per cent. The percentage of the female population who earn their living by an occupation other than household service has increased from 15.42 to 17.03, while those in household service have fallen from 6.16 to 5.11 per cent.

The Buenos Ayres *Review of the River Plate* of July 25 estimates the visible supply of wheat in Argentina at 960,000 bushels.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Insurance—By-law—Suicide.

The Supreme Court of Louisiana held, in the recent case of Daughtry vs. Knights of Pythias, that under a contract of life insurance issued by a mutual company, conditioned to be subject to any by-law thereafter to be enacted, the insured was bound by a subsequent by-law forfeiting such policies when the insured should die by his own hand.

Sale—Promise—Evidence.

The Supreme Court of Minnesota held, in the recent case of Cochrane et al. vs. West Duluth Industrial Construction and Improvement Company et al., that in an action to recover for goods alleged to have been furnished to a corporation at the request of the defendant (who was its president), and upon his promise to personally pay for them, where there was no written contract, and the evidence of the parties was conflicting as to the alleged promise of the defendant to pay for the goods, evidence that, at the time, the corporation was insolvent and already largely indebted to the plaintiffs, and its credit worthless, was competent as directly tending to show that the testimony of one party was more reasonable than that of the other.

Creditors—Lien—Priority.

The Kentucky Court of Appeals held, in the recent case of Emery et al. vs. Vaughn et al., that where one creditor has a lien upon two pieces of property and another has a junior lien upon only one of them, the junior lien holder may require the holder of the senior lien to look first to the piece of property upon which there is but the one lien before subjecting the other piece of property upon which the junior lien exists; that if the senior lien holder, having notice of the junior lien, releases his lien upon the piece of property in lien to him alone, out of which he might have made his debt, the junior lien holder will be given priority as to the other piece of property, and that the senior lien holder will be regarded as having notice of the junior lien if he has notice of facts sufficient to put him upon inquiry, and fails to make any investigation; but the question whether the record of the junior lien was constructive notice to him was not determined.

Railroads—Taxation—Assessments.

The Supreme Court of Louisiana held, in the recent case of The State ex rel. St. Charles Street Railroad Company vs. Board of Assessors et al., that where under the statute the earning capacity of the plaintiff company formed a basis for estimating values, and an assessment was made by taking gross earnings and deducting therefrom the cost of operating the road, the payment of debts secured by bond and mortgage of a date long anterior was not a running annual expense; that under the terms of the statutes it was not deductable from the gross annual earning of the year 1895 to fix the net earning of that year and the consequent value at the time of the franchise. The court said that franchises are property, and amounts applied from the gross receipts to the payment of property, bought many years prior, are taken account of in fixing net revenues; that the franchise was bought for cash, the amount needed to this end having been borrowed at the time, and being now bonded and paid; that these past liabilities were not annual expenses of operation lessening annual revenues, and that the liability on property did not, in assessing, constitute an offset.

Nuisance—Railroad—Dam.

The Kentucky Court of Appeals held, in the recent case of The Louisville & Nashville Railroad Company vs. Daugherty, that the maintenance of a dam in such a way as to emit disagreeable or unwholesome odors affords a right of action to those who may be made sick or even inconvenienced; that this is true, however innocent of intentional wrong may be the party erecting the nuisance, or however needful the structure in his business; that one who actively procures another to create a nuisance will be presumed to consent to its continuance until such consent is withdrawn by a notice to that effect or until objection is made, and that in an action against a railroad company to recover damages for injury to health of plaintiffs resulting from the maintenance by defendant of a pond, a good defense was presented by a paragraph of defendant's answer alleging that plaintiffs were active and influential in the negotiations resulting in the purchase of the ground where the pond was erected, having reason to know at the time from previous observations of similar conditions there that vegetable matter would work into the pond and become offensive and unwholesome; for the reason that if these facts were true the company was at least entitled, before the suit was instituted, to some notice from the complainants that the pond was offensive or obnoxious to them.

Savings Bank—Depositor—By-law.

Under the statutes of Michigan the officers of a savings bank are the agents of the bank and not the agents of the depositors, and a by-law passed by them is a by-law of the bank and not of the depositor, and if the effect of it is to change the relation of the creditor to the debtor, so as to relieve the obligation of the debtor to the creditor, the creditor must have his attention called to the by-law in such a way that he shall understand its effect before he shall be bound by it. So held by the Supreme Court of Michigan in the case of Ackenhausen vs. People's Savings Bank, reported in the Detroit *Legal News*. The court said: "Section 26 of the banking law (S. L. 1887, p. 233) provides that savings banks shall have power to receive deposits, and says: 'All deposits in said bank shall be repaid to the depositors, or his or her lawful representatives, when required, at such time or times, and with such interest and under such regulations as the board of directors of the bank from time to time prescribe, which regulations shall be printed and conspicuously exposed in some place accessible and visible to all, in the business office of said bank.' * * * We think the requirement of the statute that the deposits shall be paid to the depositor or his legal representatives cannot be changed by a by-law, unless the attention of the depositor is called to the by-law, and he assents thereto, actually or impliedly."

Landlord and Tenant—Lien.

The Supreme Court of Georgia held, in the recent case of Cofer et al. vs. Barnett, that where there was a controversy between a landlord and another concerning certain cotton raised by a tenant of the former and which had been delivered to him by the tenant, the landlord contending that he had a lien upon the same for supplies furnished the tenant and the other person contending that he was entitled to this cotton under a bill of sale from the tenant, and these contestants agreed that the landlord might retain and dispose of the cotton and that he should pay the other contestants its value, if indebted to him, "in a settlement of this matter before the court," and the question of the landlord's liability depended upon whether or not his lien was in law superior to the bill of sale, it was error on the trial of an action of trover for the recovery of the cotton, subsequently brought by the holder of the bill of sale against the landlord, at which the above recited facts undisputably appeared, and at which the existence, validity and superiority of the landlord's lien, though the same had not been foreclosed, were shown, to direct a verdict for the plaintiff. The court said that, under the circumstances above stated, the respective rights of the parties did not depend upon the question of foreclosure, but upon the question of legal superiority as between the lien and the bill of sale, and under the evidence submitted the verdict should have been for the defendant.

Note—Agreement—Collateral Security.

The Supreme Court of Georgia held, in the recent case of Montgomery vs. Hunt, where, construing together a promissory note sued upon and a contemporaneous written agreement between the parties, it appeared that the note was given merely as a collateral security to the payee for one-half of certain commissions which it was contemplated would be earned by the maker upon sales of a certain patent fence; that under the terms of the agreement it was clearly incumbent upon the maker to use reasonable dilligence in endeavoring to effect such sales, and if the failure to make them resulted solely from a want of such diligence, he would, as to the commissions, be chargeable as if the sales had been actually made, to the extent that they could have been made by the exercise of such diligence, and that otherwise he would not; that it was the right of the plaintiff suing upon the note to show that the defendant had made no effort to effect sales, and a corresponding right upon the part of the defendant to show that this resulted from the failure of the payees to comply with their agreement to furnish him samples of the fence, and that if the plaintiff purchased the note before its maturity, bona fide and for value, without knowing what the consideration was and without notice of the alleged failure thereof, and also without notice of facts sufficient to put him upon inquiry which would lead to a knowledge of the truth, he would in any event be entitled to recover the full amount of the note, and if he purchased with such knowledge or notice, he would be in no better condition than the original payees.

BUSINESS NOTES.

Exterminating Seals.

Seattle advices from the government commission appointed to investigate the seal fisheries in northern waters say that the herds have diminished to an insignificant fraction of their former proportions. The North American Commercial Company will be unable to secure more than 15,000 skins from the herds on the Pribylov Islands this season. The United States steamer Albatross, having the members of the commission on board, is now cruising off the coast of Japan in company with a Japanese gunboat.

American Hawaiian Interests.

Consul-General Mills, at Honolulu, supplementing a former report calling attention to the diversion of Hawaiian trade from San Francisco to New York, writes to the department under date of August 13 that during the six months ending June 30 the total exports from Honolulu to the United States were valued $8,748,526.40, against $4,499,916.27 for the corresponding period last year, an increase of nearly $4,000,000. Of this total $8,542,781.64 represents the value of sugar sent to America, $2,457,532 of it going around the Horn to New York, except a small cargo which went to Boston. Already during the present calendar year the direct shipments to New York have amounted to $3,046,368.49.

The Passing of the Pines.

One hears a great deal at all the lake ports of the approaching end of the white pine trade, for it is said that at the present rate of consumption it will only be twelve or fifteen years before the forest lands will be stripped. The last legislature created a new office—that of forest warden—whose duty it is to investigate and report upon the condition of the timber of the state and recommend legislation for its restoration. His first report, which has just been issued, shows that there remains in Minnesota 10,890,000 acres of forest land, covered with 19,000,000,000 feet of white and Norway pine. The annual destruction amounts to 1,800,000,000 feet.

Why Wheat Prices Are Low.

An exchange says that "a great amount of talk is being indulged about the low price of wheat, and a certain class of so-called economists attribute the decline to the lack of money, especially of the cheap kind. But the facts show that the decline in the value of wheat since the seventies has resulted from excess of production in comparison to the consumptive demand. From 1869–72, inclusive, the United States annually produced an average of 244,187,750 bushels. In the four years 1892–95 the average crop was 510,000,000, according to the Cincinnati *Price Current*, which is generally considered a better authority than the Department of Agriculture. The population of the United States increased perhaps a little more than 60 per cent. during the period covered by these figures, while the wheat product more than doubled. Besides, Russia and the Argentine Republic have greatly increased their exports of wheat to the world's markets."

London Chambers of Commerce.

The London *Times* says: "A special meeting of the Associated Chambers of Commerce will be held in Southampton on the 15th and 16th of next month (September), Sir H. Stafford Northcote, C.B., M.P., in the chair. The London Chamber has given notice of moving that the time has now arrived when the government 'may properly consider the desirability of appointing competent officers to the more important colonies and possessions for the purpose of reporting on their agricultural, commercial, mineral and industrial development, such officers to be paid out of imperial funds.' Among the other subjects to be considered are the establishment of a commercial union between the colonies and the mother country; the urgency of an adequate royal naval reserve; the formation of public trusts for the acquisition and working of canals; the new coal charter party for Welsh ports framed by the Chamber of Shipping of the United Kingdom, which, in the opinion of the Italian Chamber of London, 'ignores the just interests of merchants and of their foreign customers,' and the establishment of a cash-on-delivery system in connection with the parcel post."

Foreign Crop Situation.

Although the statistics of the current harvests are still incomplete, a sufficient number of reports have been received at the government Department of Agriculture upon which to base an estimate that there will be a medium crop of wheat and rye in Germany, and a fine harvest of both of these grains in Austria-Hungary. The general failure of the cereal crops in Russia and the prohibition of time operations on the bourses in Germany are leading to speculative transactions in import orders upon the chance that a demand for the grain thus purchased will spring up. The agrarian newspapers are advising home producers to hold on to their grain, with the assistance of bank advances, and the position points to a reaction, with keen competition between home-grown and imported grains. Concerning the state of the crops in Russia, the consensus of opinion is that the harvest there is an absolute failure. The crops in the great southern area are fair, but in the basins of the Volga, Dneiper and Don the general average is very bad. It is reported that a famine exists in the Keherson districts of Southern Russia, and that the local authorities are appealing to the government for relief, else the people must die from starvation.

Spring Wheat Crop Reports.

The Minneapolis *Journal* reports that "the three states of Minnesota, North Dakota and South Dakota have raised this year 108,000,000 bushels of wheat, according to this estimate, or less than an average crop. The acreage used in this production was 9,500,000, or about 1,500,000 more than allowed by the Agricultural Bureau in Washington. The crop is not of the best quality, and it is yet a question whether a considerable acreage in North Dakota and northern Minnesota matures, because of possible frost injury. No allowance has been made for frost, however, in this computation. The late wheat is filling nicely, and it promises a good yield, if it is not injured. The state yields are as follows: Minnesota, 44,500,000; North Dakota, 36,000,000; South Dakota, 27,500,000. It is probably true that no crop of recent years in these states has approached the present crop in its spotted character. In nearly every county yields range from three bushels to thirty, with the former not uncommon in many sections, and the latter quite rare. There is considerable twenty-bushel wheat, but as a rule fifteen to eighteen bushels is about top, and five to eight is about minimum. A majority of yields will range from five to fifteen bushels."

British Report on Japan's Trade.

The London *Financial News* says: "In 1895 the total trade of Japan was 15 per cent. larger than in the previous year, and of the total the share of Yokohama was exactly one-half. Two-thirds of the increase were due to exports and one-third to imports, and, as Consul Hall says, these figures are an unmistakable indication of the vigor and recuperative power of Japan's foreign trade. We are sorry to find that, comparing the rate of increase of the four countries which are the leading participators in Japan's trade, and taking imports and exports together, the statistics for Yokohama show that Germany is making the most rapid advance and Great Britain the slowest, the value of German trade in 1895 being an increase of over 53 per cent. on the preceding year, American trade nearly 18 per cent., French 12¼ per cent., and that of Great Britain less than 8 per cent. As regards the proportions in which the gross trade of the port is shared between the same countries, America heads the list with 34 per cent., Great Britain comes next with 21 per cent., France next with 17 per cent., and then Germany with 7 per cent. Of the total exports of Yokohama America takes more than half, while Great Britain supplies nearly half the imports."

Suez Canal Traffic.

The New York *Engineering News* says: "Suez Canal traffic for 1893–94–95 is given as follows in the late report of the British directors of the Suez Canal Company:

	1893.	1894.	1895.
Vessels	3,341	3,352	3,434
Gross tonnage	10,753,798	11,283,855	11,833,637
Net tonnage	7,659,068	8,099,175	8,448,383
Transit receipts (francs)	70,667,361	73,776,827	78,103,717

Of the ships using the canal, Great Britain owns about 2,400 out of the total, and Germany, France and Holland come next in the order given, though German ships have increased from 272 in 1893 to 314 in 1895. This canal was opened to traffic in 1869. In 1872 1,082 vessels passed through, with a gross tonnage of 1,744,481 tons, yielding transit receipts of 8,993,732 francs. In 1880 the number of vessels rose to 2,026 and in 1882 to 3,198, and since the latter date the number has never fallen below 3,000. But while the mean net tonnage per vessel was 1,071 in 1872, this mean tonnage was 2,460 in 1895. The average duration of voyage is now 18 hours 44 minutes for vessels navigating by night as well as by day, and the average for all vessels is 19 hours 18 minutes. In 1895 3,266 vessels navigated the canal by night and day. Since April 15, 1890, vessels drawing 25 feet 7 inches have been permitted to pass through the canal."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

There is a somewhat better feeling among wholesale merchants as to prospects for autumn trade in seasonable goods. This extends to some industrial lines, notably iron and steel. Chicago sales of iron this week are larger than for all of August, and Pittsburgh sales are larger and prices better on the outlook for harmony among steel makers. Demand for shoes from western jobbers is more active than at the east, and the dry goods trade regard the results of the auction sale of spring goods at New York fairly satisfactory. Notwithstanding a continuation of high rates for money, with restricted discounts and restricted time loans, there is a better feeling in financial circles. The most notable increase of sales of seasonable goods has been at Chicago, mostly among dry goods and hardware jobbers. St. Louis also reports a moderate gain in demand, as does St. Paul, where a state fair has attracted visitors. Baltimore's wholesale trade is checked by restricted bank credits, but is still larger than one year ago. At the south relatively the most active demand is at Charleston, Augusta, Birmingham, Nashville and New Orleans.

The more encouraging feature as to the movement of prices lies in advances of quotations for wheat on the stronger statistical position and free export movement, higher prices for iron and steel at Pittsburgh and Chicago, with a gain in demand and a further appreciation in quotations for cotton on renewed reports of damage to the crop. Petroleum and leather are also higher. Print cloths, pork and wheat flour are unchanged, while wool is steady after sales of considerable lots at cut prices. Lower quotations are reported for corn, oats, lard, sugar and coffee.

On the other hand, there has been no general increase in industrial production, the output, as a whole, being smaller than previously during the year. Further damage to the Texas cotton crop is reported, and the outlook for business in that state is less attractive. At Detroit, Cleveland, Cincinnati, Kansas City, Omaha, Milwaukee, Duluth and Minneapolis there is no change from the dullness and conservatism which have marked preceding weeks. Trade on the Pacific coast, except in certain export lines, is of small volume.

There are 336 business failures throughout the United States reported to BRADSTREET'S this week, 16 more than last week. Weekly totals continue higher than in like periods in preceding years, except in 1893. The total one year ago was 184, two years ago it was 207, while in the like week in the panic year, 1893, there were 379 business failures reported—43 more than this week.

August bank clearings are the smallest for any month this year, and among the smallest reported after the panic of 1893. Total clearings for August were $3,526,416,248, a decrease of 14.2 per cent. from last year, of 19 per cent. from the July total of this year, and 13.6 per cent. from February, 1896, the smallest month's total this year. Compared with August, 1894, only a fractional gain is shown for last month, and with August, 1893, during the panic, the gain is only 5.4 per cent. Every group of cities shows a decrease in August totals from those one year ago, the largest falling off, 18.6 per cent., being in New England, and the smallest, being 5.8 per cent., in the south. The only large cities showing gains are New Orleans, with an increase of 4 per cent., and Omaha, 7 per cent. Among the larger cities showing decreases are New York, 14.8 per cent.; Boston, 19.2 per cent.; Philadelphia, 17 per cent.; Chicago, 13 per cent., and St. Louis, 6 per cent. Total clearings at sixty-six cities for eight months aggregate $33,361,195,647, a decrease of 1.4 per cent. from the like total in 1895, a gain of 14.5 per cent. over 1894, but a decrease of 13 per cent. from 1893.

Bank clearings show no marked change, the total being $827,000,000 this week for cities throughout the United States, an increase of 10 per cent. over last week, but a decrease of 10 per cent. from the like week one year ago. Compared with the first week of September, 1894, this week's aggregate shows a gain of 4 per cent., and an increase of 12 per cent. over the like period in 1893. Contrasted with the corresponding week in 1892 the falling off is 26 per cent.

World's stocks of wheat on September 1, as reported to BRADSTREET'S, amounted to about 97,096,000 bushels, nominally less than was held in the United States, Canada, Europe and afloat for Europe from all sources one month before, and less than has been reported at the first of any month since September 1, 1891. This is the most bullish feature of the statistical position of wheat. Supplies of available wheat here and in Canada are larger than one year ago, but those in Europe and afloat for Europe are only a little over one-half what they were one year ago.

Easier conditions in the money market, the arrival of considerable gold from Europe, the continuance of engagements for the shipment of specie from London, and, above all, the Vermont election and the apparent decline of free silver's chance of success, have given a strong and advancing tone to stock speculation at New York. The market is narrow and professional, however, without European support or outside buying, and the improvement depends on the change in professional speculative sentiment, the advances having been well distributed throughout the entire share list. The settlement of the overspeculation in local securities at Chicago continues to give trouble, but has resulted in no failures. Foreign exchange has been stronger on covering of transactions by gold importers, but is weaker at 4.84@4 84¼ for demand sterling.

Exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal this week amount to 3,369,862 bushels, against 3,281,000 bushels last week, 2,260,000 bushels in the week a year ago, 3,207,000 bushels two years ago, and 4,902 in the corresponding week three years ago.

The industrial fair and millinery openings have stimulated trade at Toronto. Montreal merchants report some gain also, but the demand is checked by uncertainty as to Canadian tariff changes. The volume of trade is limited at Quebec City, in part in sympathy with dullness in trade in the United States. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $18,015,000, against $18,403,000 last week and $16,784,000 in the week a year ago. There are 30 business failures reported from the Dominion of Canada this week, against 31 last week, 33 in the week a year ago, and 29 two years ago.

FINANCIAL.

The Money Market.

The change for the better in the New York loan market this week was very apparent, but it was a change in sentiment rather than in tangible conditions. The bank statement of last Saturday was better than expected, and leading financial authorities pronounced the opinion that the period of unduly high rates was at an end, while the arrival of large gold importations from London and the fact that portions of them were turned into the Treasury, thus raising the specie reserve, had an appreciable effect. The demand for currency at the interior, as well as the applications made by country institutions for rediscounts, have slackened, and some amounts of funds which were taken out of the market during the preceding fortnight have apparently returned to it on the better political and financial outlook. As a result of this, it can be said that a few scattering transactions have been made in time loans at 6 per cent. and a commission, and that instances of sales of mercantile paper are reported at 8@9 per cent., though one of the features is the unwillingness of makers to sell their paper at such figures. Call loans on the Stock Exchange have been very irregular, ranging from 3 to 12 per cent., but the bulk of the week's business has been between 5@8 per cent., and, though the irregularity is expected to continue, the feeling is that the market will work steadier and slightly easier.

The New York Banks.

The averages given out last Saturday have been severely criticised in some quarters as showing that, in order to avoid the issue of clearing-house certificates, the banks have transferred balances among each other and thus made a better showing than the facts justified. Whether this is well founded or not, the figures were more favorable than had been anticipated, and had its weight in quieting the apprehension entertained in business and speculative circles as to the ability of the banks to meet the situation without resort to extraordinary means.

The statement is, on the whole, a consistent one, showing a contraction of $3,000,000 in loans, a loss of $2,000,000 in cash, and a reduction of $6,320,000 in deposits. The banks lost $3,566,000 to the Treasury, and the flow of currency to the interior was known to have continued. In spite of all this, the loss in surplus reserve was only $436,450, the figures of the statement comparing as follows with those of the preceding week:

	Aug. 22, '96.	Aug. 29, '96.	Changes.
Loans	$458,333,500	$455,790,200	Dec. $3,143,300
Specie	46,796,600	47,345,700	Inc. 549,100
Legal tenders	77,050,700	74,474,200	Dec. 2,576,500
Deposits	458,298,600	451,934,800	Dec. 6,363,800
Circulation	16,365,800	17,055,500	Inc. 689,700
Total reserve	123,847,300	121,819,900	Dec. 2,027,400
Reserve required	114,574,050	112,983,700	Dec. 1,590,950
Surplus reserve	9,272,650	8,836,200	Dec. 436,450

At the corresponding period last year the surplus reserve was $39,149,925, against $65,820,825 in 1894.

The Boston Banks.

	Aug. 29, '96.	Aug. 22, '96.	Changes.
Loans	$160,921,000	$161,793,000	Dec. $872,000
Circulation	10,046,000	9,978,000	Inc. 68,000
Deposits	93,366,000	94,922,000	Dec. 1,556,000

Silver.

The silver markets have been practically unchanged this week and without features of importance. London advices report further speculative unloading. The only trading in silver bullion certificates here was about 15,000 ounces at 67c. Exports of silver from London to the East, from January 1 to August 20, are reported as follows:

	1896.	1895.	1894.
To India	£2,400,278	£2,410,880	£3,571,515
To China	574,413	1,175,767	2,040,873
To the Straits	545,686	541,503	877,652
Totals	£3,520,377	£4,128,150	£6,490,040

Foreign Exchange.

The exchange market has reacted from the violent decline of the preceding week. The supply of commercial bills is apparently increasing, and has already attained a good volume, while, though the relaxation of the money market tends to increase inquiry, the demand from mercantile quarters is very restricted. The chief buying of bills comes, in fact, from the importers of gold, to cover last week's large transactions of that kind. This, with the firmer tone of the London money market and the expectation that the Bank of England rate would be raised on Thursday, seems to have been responsible for the firmer tone which prevailed in rates. This was shown by the course of actual quotations for bankers' demand bills, which were 4.83½@4.83¾ at the close of last week, but by Tuesday of this week sold up to 4.84¼@4.84½. Posted rates were unchanged at 4.82½@4.85 till Tuesday, when the rate for 60-day bills was advanced to 4.83, to correspond with the higher quotations in the actual market for that variety of remittances, induced by the hardening of the London money market. After Tuesday the exchange market was generally less active, and showed a renewed disposition to yield, actual rates for sight falling back to 4.84@4.84¼. At the advance in rates, with the higher money rates in London, and the apparent disposition of the Bank of England to check the outflow hither, gold-importing arrangements ceased in the early part of the week. The decline of rates here and the easier tendency of money in London resulted, however, in the announcement on Thursday of fresh engagements amounting to $3,000,000. Allowing for duplications, the total gold movement for the fortnight amounts to about $20,000,000. Of this some $7,000,000 has already arrived. On Friday exchange was dull and depressed in tone at 4.84@4.84¼ for demand sterling, and some further gold engagements were announced, which, with duplications and cancellations, leave the total amount to be shipped at around $20,000,000.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Aug. 29.	Aug. 31.	Sept. 1.	Sept. 2.	Sept. 3.	Sept. 4.
4.82½ @ 4.85	4.82½ @ 4.85	4.83 @ 4.85	4.83 @ 4.85	4.83 @ 4.85	4.83 @ 4.85

ACTUAL BUSINESS BANKERS' SIGHT STERLING.

4.83½ @ 4.83¾	4.84⅛ @ 4.84¼	4.84¼ @ 4.84½	4.84 @ 4.84¼	4.84 @ 4.84¼	4.84 @ 4.84¼

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.81¾ @ 4.82	4.82 @ 4.82½	4.82½ @ 4.82¾	4.82½ @ 4.82¾	4.82¼ @ 4.82½	4.82½ @ 4.82¾

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.84½@4.84¾; commercial bills, 4.81¾@4.82; francs, 5.21¼@5.19⅜; reichsmarks, 94½@95.

No change was made in Bank of England discount rate, which remains 2 per cent. The bank this week lost £2,327,000 specie, accountable for by the flow of gold to this country, with some withdrawals to the continent. The bank's proportion of reserve fell from 58.64 per cent. to 56.94 per cent. In the London open market discount hardened decidedly, the rate advancing from 1¼ per cent. to 1⅜ per cent., but on the announcement that no change had been made in the bank rate an easier tendency appeared. The continental money markets were all firmer, but eased off in sympathy with London.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending August 28, 1896:

	1896.	1895.
Dry goods	$2,216,370	$2,958,301
General merchandise	5,404,674	6,445,811
Totals for the week	$7,621,044	$9,404,112
Previously reported	307,042,239	341,372,526
Since January 1	$314,663,283	$350,776,638

The exports (exclusive of specie) from New York to foreign ports for the week ending September 1 were $1,320,440 above those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$7,616,739	$5,499,543
Previously reported	248,384,325	222,702,257
Since January 1	$256,001,064	$228,201,800

THE STOCK MARKETS.

The New York Stock Market.

The speculative community has made the unexpectedly emphatic pronouncement of the state of Vermont the occasion for a marked revival of bullish sentiment and tendencies in connection with prices. Other influences have in a measure contributed to this end. The arrival of some $4,000,000 of the gold engaged in Europe and the announcement of further shipments from London have not been without their effect, nor has the street neglected the fact that the major portion of the gold thus far arrived has been turned into the Treasury, raising its specie reserve from less than $101,000,000 to about $103,000,000. The money market, too, while firm, has lost much of its stringent and unsettling appearance, and, apart from the continued troubles of Chicago, owing to the overspeculations of local operators, there have been no disturbing incidents in trade or financial circles. Further gratification must be found in the fact that London has not taken any active part in the bull movement. The Bank of England has apparently offered no opposition to the movement of gold in this direction. The total now exceeds $20,000,000, and the bank this week up to Thursday parted with over £2,000,000 of its gold, with some considerable further amounts since. Nevertheless, the bank did not advance its discount rate above the 2 per cent. limit, though in 1893 it marked up its figure to 4 per cent. and checked the withdrawal of gold to this country. American stocks in London were stronger in response to the Vermont election, but the public there still seems indisposed to buy them. Nor has the local public been a factor in the week's market. Short covering and buying for long account by professional traders has been the basis of the improvement, which for the time being appears to be a sentimental one, and therefore liable to vicissitudes and sudden changes, in spite of the general belief of the street that the tendency of speculation has undergone a permanent change for the better.

The features of the market have been well distributed around the active stock list. Sugar has been one of the leaders, advancing from 105¼ on last Saturday to 114¾. The regular dividend will be declared, it is said, early next week, but the support extended to the stock was apparently of a manipulative character. St. Paul and Burlington divided honors with the leading industrials, the former rising from 65⅛ to 69¼, in face of a heavy decrease in its gross earnings for the last week of August. The southwesterns were heavy owing to the continuance of the rate war in that section, while in the northwest the demoralization is being patched up. Louisville & Nashville fell from 41¼ to 39¼, and Southern Railway was heavy at around 7¼, owing to the dissolution of the injunction against the Seaboard Air Line cut and the declaration of its management that the fight will be kept up. Chicago Gas attracts attention on the theory that the prospective change in the state administration in Illinois will be advantageous to the company. Manhattan has been erratic in its course, falling from 82½ to 79⅝, and rallying to 83⅛. Rumors were current that the quarterly dividend will be reduced next week from 1½ to 1 per cent., but further reports intimate that the reduction will be only to 1¼ per cent.

Boston Stock Market.

The market has shown a firmer tone, with the close higher on nearly all active stocks. Atchison has ruled quiet, with ¾ advance, while Chicago, Burlington & Quincy has been active and closes 5⅛ points higher. Boston & Montana has met with a good sale and closes 2¾ points higher, while General Electric has advanced 2¾ points. Sugar has been active, with values advanced 7¾ points during the week and a firm tone at the close. Bay State Gas has been active and closes ⅜ point higher. Bell Telephone closes higher.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending Price Sept. 3, 1896.	Price Aug. 27, 1896.	Sales Sept. 3, 1896.	Sales Aug. 27, 1896.

MODERATE GAINS

IN DEMAND FOR DRY GOODS, HARDWARE AND PIG IRON, WITH A BETTER FEELING IN FINANCIAL CIRCLES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, September 4.—The movement in nearly all kinds of merchandise continues slow, with business affected by the stringent money market. At the close the money market is easier in tone and a more cheerful outlook of the situation is entertained. Rates on four to six months' time have been reduced to 6½@7 per cent. on good collateral, with call money yet quoted at 6 per cent. as an average rate. Commercial paper is yet in light demand and not very freely offered. The boot and shoe market is dull, with little business doing outside of selling samples for the spring trade. Buyers, as a rule, are carrying small stocks, but they hesitate about placing case orders until after the future financial policy of the country is settled. Leather is in slow demand and only fairly steady in price. Hides are firmer all along the line and western and local offerings are light. Iron and metals are slow, with lumber in dull demand and rather easy in price.

Providence, September 4.—A meeting of representatives of many of the New England mills engaged in the manufacture of fine cotton yarns was held in this city this week, and resolutions were adopted to the effect that as the curtailment of August had been so beneficial that it be continued during the month of September, a curtailment of at least 50 per cent. being recommended to all cotton yarn spinners.

Philadelphia, September 4.—Manufacturers still complain of a scarcity of orders. There is very little demand for wool and woolen yarns. A little improvement is noted in boots and shoes, demand, however, coming from nearby customers. Lumber is unusually quiet for this time of the year; prices rule very low.

Pittsburgh, September 4.—General business shows an improvement. Country buyers are more numerous, and, while sales are not as large as they have been in former years, jobbers generally are more hopeful than they have been for some time. Money is a little easier than last week, but, aside from taking care of their regular customers, the banks are seeking no new accounts. A slight improvement is noted in iron, and a much better feeling is noted, due to the harmonious action of the members of the billet pool at their last meeting. The price of iron has slightly advanced and more sales are reported.

Buffalo, September 4.—General trade conditions remain unchanged. Bank clearings show a slight increase over the corresponding week of last year. A more hopeful feeling is expressed in many quarters.

Baltimore, September 4.—In dry goods trade seems to be progressing favorably, and the volume of business is ahead of the total in the like period last year. Wholesale commission houses also seem satisfied with results, and speak of Baltimore sales as being in advance of last year. Notion houses report a similar state of affairs. Hardware business is very fair. The shoe trade are well satisfied with the business done, and are hopeful of good results this fall. The main cause of comment is the apparent tightness of money, which makes dealers inclined to buy somewhat carefully.

West and Northwest.

Cincinnati, September 4.—General business shows no improvement.

Cleveland, September 4.—Last week's general business conditions have undergone no material change. Political uncertainties continue a check on trade in most lines beyond present requirements, and conservatism governs financial operations.

Detroit, September 4.—No improvement is noted in trade conditions and the volume of business is light. Collections are slow. Money continues close, with a moderate demand from regular customers. Banks taking no outside loans.

Chicago, September 4.—There has been a good improvement in sales with all the jobbing houses, especially the dry goods, as merchants have come together and secured a rate of one and one-third from the railroads, and by sending such tickets to buyers in the interior they have brought customers in. All have made fair purchases and feel more cheerful over the prospects for trade this fall and winter. Hardware houses also show more animation and sales have improved, but only small lots are being sold. It is the desire of merchants in the interior to restrict their liabilities, so that they are not taking more goods than they feel able to pay for in the near future. There has been more inquiry and larger sales of pig iron than at any time within thirty days, and sales were larger than for the entire month of August, a number of round lots being taken. Orders for iron and steel are small. Leather is slow, but sales are firm and packers have advanced prices 1c. within three weeks. More lumber is moving, but the tone is weak. Wool receipts, 414,367 pounds. Bankers are loaning more freely on grain and provisions and to move crops in the west. They are also taking care of regular customers. The situation more cheerful. The statement of state banks September 1 is better than expected. Eleven show losses in deposits since June 3 of $3,327,000, and a reduction in loans of $2,267,227. Chicago Stock Exchange affairs are gradually being settled. Collections are improving.

Louisville, September 4.—Changes in volume and condition of general trade for the past week, on the whole, have been unimportant. Better grades of leaf tobacco are firmer, and all assortments are selling freely. Collections in some lines are fairly good, while slow in others.

St. Louis, September 4.—Manufacturers and jobbers of necessities say there is a slight improvement in sales, due largely to the depleted condition of stocks and the lateness of fall purchasing. General trade is apparently holding its own, although collections are still complained of, especially from the rural districts. Some interest is being manifested in pig iron, the movement being of greater tonnage. While structural iron and lumber do not show any marked signs of improvement, there is a better demand for brick and finishing materials. Receipts of apples are largely in excess of requirements, values being low in consequence. Bankers report a good counter and country business, still they are conservative, and the demand exceeds the offerings.

Kansas City, September 4.—Jobbing trade is very quiet, in fact dull. Collections are slow, and no improvement in general trade is looked for until after election.

Milwaukee, September 4.—Jobbing trade remains practically in the same condition as for the past few weeks, but little activity being displayed in any

branch, and a conservative policy is being adhered to. Collections are unsatisfactory.

St. Paul, September 4.—The city has been thronged with visitors, drawn here by the Grand Army encampment and the State Fair. In consequence jobbers report the house trade very large in all seasonable lines. A noticeable feature is the number of small orders, the disposition being to buy light and often rather than stock up in advance as in former years. The presence of so many buyers in town and the time of the month has made collections unusually good.

Minneapolis, September 4.—This has been a holiday week, and consequently general business has not been up to the usual standard. Many country merchants have been in the city, but were out for recreation, as a rule, and not for business.

Duluth, September 4.—General trade continues quiet, with a marked tendency to restricted credits. The crop year, ending September 1, shows big gains over the previous year. Receipts of wheat at Duluth and Superior are 67,106,672 bushels, as compared with 33,701,657 bushels the year before, and with 51,355,000 in 1892, the big crop year. Coarse grains also show heavy gains, and 3,440,495 barrels of flour were manufactured, as against 3,324,025 barrels for the previous year.

Omaha, September 4.—Trade in all lines is quiet. Collections are slow.

Sioux Falls, September 4.—Wholesale trade shows no material change, but collections are fair. Retailers find an increased demand at points where grain is moving, but it is not general.

Southern Cities.

Charleston, September 4.—Wholesalers in all lines have had a good trade the past week, and trade generally has opened with some activity. High prices for cotton are bringing it in pretty freely.

Savannah, September 4.—Trade conditions are about the same as last week. Naval stores receipts are about the same also, with a quiet market for spirits and firm for rosins.

Atlanta, September 4.—Trade quiet. No material change.

Augusta, September 4.—Retail trade is very quiet, but jobbers report an improvement in demand for staples, owing principally to present early movement of the cotton crop, receipts being heavy.

Birmingham, September 4.—General business among wholesalers shows a little improvement over the previous three weeks. Collections only fair.

Chattanooga, September 4.—Merchants are satisfied with trade and collections, as hopes are entertained for improvement after election.

Nashville, September 4,—There is no change in the financial situation. Trade has picked up somewhat and shows a larger output. Collections continue favorable.

Memphis, September 4.—General trade shows no change. Collections are fair. Money is steadily hardening, and is in good demand.

New Orleans, September 4.—The volume of country orders from the sugar district shows some improvement, particularly in plantation supplies and machinery. The cotton movement for the season is meeting with ready sales at advanced prices. Rice is steady, but receipts are disappointing. Sugar is quiet and easier. General trade is conducted with great conservatism. Money is in good demand at 7@8 per cent., but banks are only accommodating old customers. Local securities are dull, and mostly show some decline.

Galveston, September 4.—Reports from cotton sections are to the effect that recent showers have damaged rather than improved the staple, and as a result very short crops are now expected. Business in all lines is complained of, and will fall considerably short of that of previous seasons. Money is loaned only on gilt-edged security at 8 per cent.

Pacific Coast.

San Francisco, September 4.—Trade continues comparatively quiet in all lines. Wheat is lower. The ocean freights market is firm, with a fair demand and holders in no hurry to charter. Usual bank advances are restricted. The produce market is dull. Fruits and vegetables are in fair demand.

Portland, September 4.—Trade conditions remain inactive, except that rubber goods are in fair demand. Collections are slow.

Tacoma, September 4.—Lumber continues very dull, though mills in the cargo trade are running. Shingles are scarcely moving. The merchandise movement continues restricted. Oriental traffic is holding out well.

Seattle, September 4.—General trade for August averages about the same as July, some lines reporting decrease, others increase of 5 to 10 per cent. A Japanese steamer has arrived with a cargo valued at $10,750, and leaves on the 5th with a full cargo of 35,000 tons.

Canada.

Toronto, September 4.—There is some improvement in both retail and wholesale departments this week. Millinery openings and the industrial fair have attracted large numbers of people, many of whom combine business with pleasure.

Montreal, September 4.—The millinery openings are successful, being largely attended. Jobbers state trade is the best for several seasons. Dry goods trade report sales below the average. Manufacturers are working slowly and only for immediate wants. Uncertainty as to tariff changes have a deterrent effect on them. Dullness in United States markets has a bad effect in Canada. Quebec City says the volume of business is limited and confined chiefly to staple lines.

Halifax, September 4.—Trade in dry goods for some time past has been very unsettled both for wholesalers and retailers, and, until the tariff is fixed by the new government, will remain so. Collections are only fair. The apple crop will be very large, but prices rule low. Advices from Prince Edward Island state that the oat crop will be very large. Some new oats have already been marketed, but the price is as yet very low, with little prospects of improving for some time to come.

Dry Goods.

A moderate trade is noted, but buyers are taking seasonable supplies in a fair way where they are needed at once. The feature of the market this week has been the auction sale in New York of 1,700 pieces of dress goods by the Arlington Mills. The goods were mohairs, brilliantines and cotton warps, and come under the head of spring goods. The sale passed off quickly, and under the conditions prices were considered fairly satisfactory, the average being about 25 per cent. below regular market rates. Cotton goods sell quietly, but the better turn to raw cotton gives more tone to the market. Cotton fabrics are yet selling far below the cost of production, based on the price of raw cotton, which is due to the oversupply of goods which have been thrown on the market during the past few months. Men's-wear woolens are quiet, and orders for spring are backward in being placed, forcing a large amount of machinery to remain idle.

Wool.

The market continues dull and prices low, although a rather better tone is noticeable at the close. A few large lines of wool were picked up in Boston during the past few days, including 500,000 pounds Montana, about 500,000 pounds territory, 300,000 pounds Texas and 400,000 pounds unwashed fleeces. These wools were sold at cut prices, while bids on several million pounds more were made at figures lower than holders would accept. A cable from England bidding ¼c. below the holders' views was received on a line of 650,000 pounds of territory wool. Holders show more disposition to keep their prices steady at the close, and bargains on large lines would be less easily obtained this week than last. Asking prices are yet very low, but the disposition to cut lower is less marked. Fleeces are in light supply, particularly fine grades, but the demand is dull. Australian wool is dull but held steady. Reports that more foreign wool will be shipped abroad for a market. About 200,000 pounds exported the past week, including about 50,000 pounds domestic.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only for four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.

ANDREW CARNEGIE ON SILVER.

The Pittsburgh *American Manufacturer* of September 4 contains the following letter: "In reply to your request that I should say a few words to workingmen upon the silver question, permit me to state that the question, as far as concerns workingmen and all others receiving salaries, lies in a nutshell.

"First.—To-day they are paid in dollars as good as gold, worth 100 cents everywhere. These gold dollars being worth nearly two silver dollars of the silver-standard countries, buy two dollars' worth of the tea, coffee, etc., used by workingmen. This is the reason that these articles are now so cheap in gold.

"Second.—The present dollars paid workingmen being gold dollars, buy a full gold dollar's worth of any article in all countries which are gold-standard countries.

"Therefore, if American workingmen are paid in silver dollars, the cost of everything they use from silver-bearing countries will be nearly double. This includes tea, coffee, sugar, spices, etc.

"Third.—The cost of articles purchased by his gold dollars from gold-using countries will also be doubled, as the silver dollar containing about 53 cents' worth of silver will be taken by the gold-using countries only at its value in silver. To-day our dollars are taken at 100 cents. The Mexican dollar buys in Brazil 53 cents' worth of coffee; it buys in London 53 cents' worth of anything; but the American dollar to-day buys 200 cents' worth of coffee in Brazil and 100 cents' worth of anything in London. No silver advocate can dispute these facts.

"If free silver coinage comes, which Mr. Bryan desires, the wages of the workingman will be thus nearly cut in half. The question he has to consider is: Will wages under silver nearly double? If not, he is a loser by silver.

"I answer, No. Here is the fact upon that subject:

"Wages in silver-using countries have not advanced as the value of silver has fallen. The workingmen in Mexico, Brazil, China, Japan and India get just the same amount of silver, which is now worth 53 cents on the dollar, as they did when

silver was worth 100 cents on the dollar. There wages range from 10 to 20 cents per day in silver dollars worth only about one-half the American gold dollars.

"Now the workingman who desires his revenue to be reduced nearly one-half should vote for Mr. Bryan; the workingman who does not wish this will make a great mistake if he votes so.

"It may be asked why employers are not in favor of debased money, when they could pay their workingmen in it, and thus save about one-half the cost of labor. The reason is that employers know only too well that debased money has always resulted in disaster to business. It shakes confidence, and business is based upon confidence. Employers are never prosperous unless the workingmen are prosperous. It is when labor commands the highest wages that profits are highest. When labor can be obtained at very low rates because many men are idle, the employer makes no profit. He always loses.

"I should like workmen to look around and consider the situation. We read of millions of spindles standing idle in the textile factories, of the iron mines closed around Lake Superior, of the furnaces blown out, and almost every manufacturing concern in the country running with reduced forces. There is only one reason for this paralysis in business, and that is the threat of reckless, ignorant men to lower the standard of money.

"The day that the republic decisively declares that its standard of value will remain what it has been for so many years—gold—will see the return of genuine prosperity. Until that day comes we have nothing to look for but such depression as now prevails, and even worse.

"The question is to be decided by the workingmen and those who receive salaries. If they vote for gold they vote for prosperity; if they vote for silver they will have themselves to blame for reducing the value of wages and for the hard times certain to follow.

"This is a question above party, and in this contest I am neither Republican nor Democrat, but I shall vote and work for the maintenance of our gold standard as a patriotic duty. Labor in the republic shall never be reduced to the level of China and Japan by any vote of mine.

"ANDREW CARNEGIE.

"*Pittsburgh, August* 17."

THE WORLD'S WHEAT EXPORTS.

The following table shows the exports to Europe of leading wheat-producing countries for a series of years, the gold value of wheat and the farm value of wheat and corn yearly from 1870:

	Gold value of wheat.		Farm value—	
1868–72.			Corn.	Wheat.
United States....	42,102,172	1870....	$0.549	$1.042
Russia	52,514,143	1871	.482	1.258
India	574,446	$0.935 1872	.398	1.240
1873–77.		1873....	.480	1.150
United States....	68,918,592	1874	.647	.944
Russia	52,046,986	1875	.420	1.000
India	4,226,503	1.455 1876....	.370	1.037
1878–82.		1877	.358	1.082
United States	145,274,739	1878	.318	.777
Russia	64,572,306	1879....	.375	1.108
India	13,804,666	1880....	.396	.951
Argentine	37,086	1.188 1881....	.636	1.103
1883–87.		1882	.484	.882
United States....	128,057,326	1883....	.420	.910
Russia	74,249,645	1884....	.357	.645
India	35,214,675	1885....	.328	.771
Argentine	3,846,863	1.024 1886	.366	.687
1888–92.		1887	.444	.681
United States....	129,900,738	1888	.341	.926
Russia	93,121,966	1889	.283	.698
India	33,281,200	1890....	.500	.838
Argentine	10,515,067	.990 1891	.406	.839
1893–95.		1892	.393	.624
United States....	167,002,827	1893....	.365	.538
Russia	112,000,000	1894....	.457	.491
India	21,704,000	1895....	.264	.509
Argentine	44,885,000	.785		

"During the last fifteen years Russia's exports of wheat have increased from 64,000,000 to 112,000,000, and the exports of wheat from Argentine have increased from 4,000,000 to 44,000,000. During the same period our exports have also increased somewhat. There has been an increased production of wheat by the world, and we have not actually lost the trade. We have not taken such supervision of our trade as we should, and our wheat could have been sold at better prices if there had been more care. The wheat of this country is of better quality than that of India or Argentine, and our geographical position and strict attention to business ought to give us the supreme position until we consume our own wheat."

WHO OWNS THE MORTGAGES?

The Philadelphia *Press* says: "When Mr. Bryan charged 'those who hold fixed investments' as 'the only potent force' in favor of the existing gold standard, he probably had a vague idea in his ill-informed mind that they were few in number.

"Take real estate mortgages. The mortgage is the symbol in the minds of many for the grasping creditor. In 1890 there were $6,200,000,000 of such mortgages. Who owned them? The savings banks held of these mortgages $687,583,977 in trust for 4,533,217 depositors. The building associations held $450,000,000 in trust for 1,800,000 shareholders. The life insurance companies doing business in New York state held (December 31, 1889) $272,828,457 for 4,582,281 policy-holders. Adding other states in 1890 about $300,000,000.

"In these three items in 1890 there were 12,100,000 persons holding $1,437,000,000 of mortgages. This number of persons is nearly twice as numerous as the votes which will be cast for Mr. Bryan. One-fourth of the real estate mortgages in the country were owned in 1890 by this thrifty, industrious, saving mass of people, who are 'those who hold fixed investments' of whom Mr. Bryan spoke, and who are turning this thing over just now pretty carefully in their minds and making them up that, as they paid in a gold dollar, they do not propose to get a silver one, worth half as much, paid in return.

"This disposes of one-fourth of this mortgage debt. It is owned literally by the million for the million. The banks hold little or nothing of this mortgage debt. The national banks are prohibited from holding any. All the other banks, state banks, trust companies and private banks, in 1890, held less than $60,000,000 of these loans. Railroads do not own them. They have their own mortgage bonded debt of some $5,000,000,000, which is owned, 10 per cent. of it, by insurance companies and savings banks and the rest scattered among 500,000 people. The big corporations do not own real estate mortgages.

"As we have shown, a quarter of these mortgages in 1890, about $1,500,000,000, were held by 13,100,000. The other $4,700,000,000 were in the hands of small owners. Look over any county clerk's book of real estate liens. Consult your acquaintance. The great mass of mortgages are held locally in small sums and amounts by saving and thrifty people. Even the big mortgage companies represent a great array of holders. In every rural county farmers loan to each other, small sums are put out at bond and mortgage, many a widow, orphan and aged man have their all in little mortgages.

"'Those who own fixed investments,' we warn Mr. Bryan, are a bigger class and in larger numbers than he thought. We have given the figures for 1890 because the real estate mortgage figures were for that year. This great army has grown. There are to-day 5,000,000 of savings bank depositors, 2,000,000 of building association shareholders and 8,700,000 of insurance policies, in all 15,700,000, and they hold about $2,000,000,000 of mortgages.

"Mr. Bryan, this is a big army to buck against."

PENNSYLVANIA SILK, IRON AND STEEL.

The Chief of the Pennsylvania Bureau of Industrial Statistics has completed a compilation of interesting data concerning the silk, iron and steel industries of Pennsylvania. In a comparison of the days the 381 establishments mentioned were in operation for the years from 1892 to 1895, he says that between 1892 and 1893 there was a decline in all of the fifty-one industries considered except horseshoes, oil tanks, water wheels, car springs, carbons and caramels. But as these six industries represent but one establishment each, and the fifty-one industries on which the comparison is based represent 381 establishments, it will be seen that 375 had a decrease in the number of days in operation. The highest percentage of loss was sustained in the worsted goods industry. The average decrease of days in operation to each person employed was thirty-one days. There was an increase in 1894 over the previous year in the number of days these establishments were operated.

"The report will show the per capita of each wage earner in various branches of industrial work. A synopsis of the tables on this branch of the report show that the aggregate amount of wages paid to 149,568 persons was $7,933,317. In Great Britain the amount of wages paid for the same class of work was far below these figures, in some cases being 50 per cent. less.

"The lowest average in yearly earnings was reached in 1894 and the highest in 1892. The average for the former year was $411.39 and for the latter $433.39. The report will show that less than 500 persons had increased their yearly earnings in 1894 over 1892, the increase being nominal. The remaining 107,604 persons suffered a decrease. There was almost a uniform advance in yearly earnings last year over 1894, the average of all the industries in 1894 being $411.39, and last year $438.29. Forty-seven of the industries share in the increase.

"In 1892 the value of the pig iron product in Pennsylvania was $11,494,476, but there was a decrease of nearly 25 per cent. in 1893. The following year the shrinkage continued at about the same proportion. It is a significant fact that the tonnage in 1895 exceeded that in 1892, the output for 1892 being 823,581 tons, against 886,750 tons last year, an increase in the output, but a decrease in the value of the same. A still greater decline was experienced in the bar, sheet and plate iron industries. Comparing the value of the product of the steel industry—thirteen establishments represented—for 1892 and 1894 the result is: 1892, $24,711,579.63; for 1894, $15,781,892 77, a difference of nearly $9,000,000 in the value of the output.. This comparison of the decrease in values continues throughout the report."

AMERICAN CYCLES IN ENGLAND.

The American vice-consul at Dublin, reporting to the State Department on bicycles imported from the United States, says that though the present year has been the busiest yet known in everything pertaining to the cycle trade, the general opinion is that the coming year will far exceed it in business done. During the season now closing it has been no easy matter to secure a machine from the first-class makers without considerable delay, as they have been unable to meet the large demand. It has been a common complaint that many weeks and even months have elapsed between ordering and receiving a machine. The consequence of this delay in delivering bicycles is that many of the Irish agents are looking to the United States for a part of their supply, and are even at present stocking their depots with American machines or looking out for American agencies, and if our manufacturers properly use their opportunities, there is no doubt that American cycles will enjoy a large share of patronage from the cycling public, and that the best grades of American machines will obtain as firm a footing and ready a sale as the best British makes now have.

"At the present time," the consul writes, "the entire cycling press of the United Kingdom is much exercised over what is termed the 'American invasion.' There is apparently a general distrust of American machines, and paragraphs and letters intended to prove that English machines are superior in quality and design are of frequent occurrence. Criticism is always valuable in that it shows where an improvement or change might be made with advantage or else where the critic is prejudiced. Nearly every detail on the machine is adversely criticised and the suggestion made that it must be 'brought up to date according to English ideas' before cyclists will approve it. The parts which meet the most general disapproval are the shape of the tubes, the particular form of the front and back wheel, the crank bracket bearings, the width of tread, the chain adjustment, insufficiency of mud guards, and especially the use of single tube tires. Criticism does not stop with what is on the machine, but the absence of a gear case is always commented on, although the majority of English bicycles do not have it fitted unless specially ordered. The machine is liked on account of its lightness, but there is a general impression that lightness is obtained by a sacrifice of strength, and a common question is: 'Will it last as long as our machines?' Especially is this the case regarding the use of wooden rims and the lightness of chain.

"With proper introduction and management it appears that the prospect is excellent for an Irish market of great profit."

SILVER AND PRICES.

The Philadelphia *Ledger* says: "The United States Department of Agriculture has issued an interesting circular giving the acreage, production and value of principal farm crops in this country from 1866 to 1895. All values stated in the circular for 1862 to 1878 are currency values, and it is important, in this particular, to know that the currency equivalent of $100 in gold, as an average for each calendar year, is as follows: In 1862, $113.3; 1863, $145.2; 1864, $203.3; 1865, $157.3; 1866, $140 9; 1867, $138.2; 1868, $139 7; 1869, $133; 1870, $114 9; 1871, $111.7; 1872, $112.4; 1873, $113.8; 1874, $111.2; 1875, $114.9; 1876, $111.5; 1877, $104.8; 1878, $100.8.

"The following table, prepared from circulars issued by the Treasury and Agricultural departments, will be found of interest. The price for silver represents the average of the fine ounce; corn, wheat, oats, rye, barley, buckwheat and potatoes at the bushel rate; hay, by the ton; tobacco, by the pound; mess pork, by the barrel in New York. For several of the commodities no estimate of crop was prepared by the United States Department of Agriculture for 1889 to 1892. In the preparation of the table fractions of cents have been discarded, five mills or over being credited as a cent and four mills or less omitted.

Years.	Silver.	Corn.	Wheat.	Oats.	Rye.	Barley.
1866	$1.34	$0.68	$2.20	$0.50	$1.18	$1.01

"It will be noticed that while there has been a general fall of prices during the years covered by these tables (a fall that was world-wide), there has been a great fluctuation, as the supply and demand varied. This proves the folly of the contention of the free-coinage advocates that the cessation of the free coinage of silver has reduced prices, inasmuch as, to verify their statement, the fall would be uniform as compared with the drop in silver, whereas in many cases prices rose while silver fell. The truth is that the cheapening in transportation, the introduction of machinery, the development of new territory, and the growing competition with foreign countries, have been the general causes for the fall of prices."

ROADS NOW IN CHARGE OF RECEIVERS.

How many railroads are now in the hands of receivers? This question, which is frequently propounded to the *Railway Age*, is a difficult one to answer up to any given date, because changes are constantly taking place and information of new receiverships and of the discharge of receivers, either as a result of foreclosure sale or by reorganization without foreclosure, is not always immediately available. "But without undertaking now to trace the history of each insolvent road down to date, an answer sufficiently complete for the purpose of most inquirers may be given by taking the statements of the Interstate Commerce Commission for June 30, 1895, adding thereto the receivership figures for the subsequent twelve months, as shown by the records of the *Railway Age*, and deducting the foreclosure sales for the same period. The result is as follows:

	No. Roads.	Miles.	Capitalization.
In hands of receivers on June 30, 1895	169	37,855	$2,500,000,000
From June 30, 1895, to June 30, 1896	38	5,576	410,000,000
Totals	207	43,431	$2,910,000,000
Sold from June 30, 1895, to June 30, 1896	57	14,437	1,009,899,000
In receivers' hands June 30, '96	150	29,994	$1,900,101,000

"In round numbers, it may be said that on June 30, 1896, there were in the United States in the hands of receivers 150 roads, with 30,000 miles of lines and representing $1,000,900,000 of investments in capital stock and lands. These figures show a large reduction in the mileage and capitalization within the last twelve months under consideration, owing to the very large number of foreclosure sales during that period, including several properties of great magnitude, such as the Atchison, Topeka & Santa Fé, Erie, New York, Pennsylvania & Ohio, etc. Per contra, there were some large additions to the receivership list, including the great Baltimore & Ohio, and from the present unfavorable outlook it begins to be doubtful whether the reorganization of insolvent roads will be found to have kept pace with the new insolvencies during the calendar year 1896."

WINE PRODUCTION OF THE WORLD.

Consul Germain, of Zurich, Switzerland, has sent to the State Department statistics regarding the wine production of the world, which show that it is estimated to be 3,671,963,000 gallons annually, having slightly increased during the last few years, in consequence of the decrease of the ravages of the phylloxera, which induced French wine-growers to replant their devastated vineyards. The quality of wines did not improve in the same ratio with the quantity, the new methods of wine culture tending more to increase quantity than improve quality.

"The investigations which were made," he says, "have shown that the general extension of vine culture, in countries other than France, did not help to increase the national wealth. It is a fact that in Australia and in a few other countries wine making has not proved profitable, and producers have become discouraged. In Australia the government had to grant subsidies to encourage growers, while in other countries more profitable branches of agriculture were resorted to. Ranking in importance as wine-producing countries the different nations stand as follows: (1) France, (2) Italy, (3) Spain, (4) Portugal, (5) Germany, (6) Austria-Hungary, (7) Russia, (8) Switzerland, (9) the Balkan States, (10) Argentine Republic, (11) Chili, (12) United States, (13) Brazil, (14) Australia, (15) Cape Colony.

"The exertions of Italy to establish foreign markets for her wines are worthy of mention. Large stocks and technical control stations have been established at Berlin, Vienna, Trieste, Budapest, Zurich, Buenos Ayres and New York. Spain, in spite of her having been very much afflicted by the phylloxera in certain regions, has been able to maintain her wine production on the former scale. That country has made great progress in vine culture. Spain has established a control station at New York. She is constantly replanting the vines that have been destroyed by the phylloxera, and the government is buying land, on which American vines, known to be of great resisting quality, are being planted."

Consul-General Mills, of Hawaii, reports that under the operations of the new tariff law, which goes into effect January 1, 1897, California wines, which now pay a duty of fifteen cents a gallon, will be admitted into Hawaii free, and the duty on Japanese "saki" will be increased from fifteen to sixty cents a gallon.

"EUROPE IS PROSPEROUS."

The *American Manufacturer* says: "On several occasions we have referred to the fact that the iron and steel industries of continental Europe were in a much more prosperous condition than those of the United States. Advices received from our exchanges each week prove that while the business depression here is growing deeper, France, Germany and Belgium is enjoying an increasing degree of prosperity, particularly in industrial lines. The latest reports state that the iron trade in the Rhenish-Westphalian district of Germany is fully maintaining the active tone which has now prevailed for a long time. Pig-iron producers, who have been working at high pressure for several months, have still considerable orders in hand, while inquiries have been received for further supplies. In the Siegen district of Germany opinions are now generally expressed that the present active state of affairs is likely to be continued well over next year. Iron ore producers are doing a very large trade, especially in spathic ore, and the orders now held will keep the miners fully engaged until June, 1897. Though the finished iron makers in France have their order books well filled, and are assured of regular employment for some months to come, they continue to be in receipt of a large number of fresh inquiries, and they in all cases ask for the full quotations, which consumers are willing to pay without discussion.

"In Belgium the situation is particularly good. The pig-iron trade is rushing, and consumers have found it advisible to cover their probable needs so far ahead that prices will no doubt continue to be upheld. Manufacturers of rolled iron find it necessary to refuse business, and the price of merchant bars is advancing. Sheets are in particularly good demand, and the steel trade is fast improving.

"With trade so brisk across the water, the effect should be felt here to some extent at least. But, on the contrary, the situation in the United States appears to be growing worse. And the causes are very evident. First, our industries have been injured by the policy which encouraged foreign products at the expense of home producers. Lowered tariff duties have given the foreigner a better chance in our market, and the effect has been felt in American industrial lines. Then came the financial flurry to make things worse. The stability of our currency is threatened, and the party which has closed so many workshops is now endeavoring to flood our country with a debased currency. On all sides there is doubt, distrust and uncertainty. The only way out of our present deplorable condition is to return to the policy of protection and to stick to the financial system which has made our dollar a dollar the world over. Nothing short of this will help us. No policy of getting 'something for nothing' will bring back national prosperity, and the continued encouragement of foreign producers will tend to further depress American labor."

NATIONAL CO-OPERATIVE FESTIVAL.

The (British) Labor Association's annual coöperative exhibition, which opened recently at the Crystal Palace, London, reports that its object is to promote "the copartnership, that is, the equal partnership, of labor with capital, the system under which, in the first place, a substantial and known share of the profit of a business belongs to the workers in it, not by right of any shares they may hold, or any other title, but simply by right of the labor they have contributed to make the profit. * * * The following figures give the results of the copartnership productive societies during the years 1894 and 1895, and show what progress has been made since 1883, the year before the Labor Association was formed: Number of societies, 1883, 15; 1894, 120; 1895, 155. Sales for the year: 1883, £160,751; 1894, £1,371,424; 1895, £1,859,876. Capital (share, reserve and loan): 1883, £103,436; 1894, £799,460; 1895, £915,302. Profits: 1883, £9,031; 1894, £68,987; 1895, £94,305. Losses: 1883, £114; 1894, £3,135; 1895, £2,296. Profit to labor: 1883, nil; 1894, £8,751; 1895, £14,235. There were formed during 1895 five new societies in England, none in Scotland, and 30 in Ireland, while the increase in sales amounted to £113,343 in England, £343,988 in Scotland, and £31,123 in Ireland. The new societies were mainly Irish creameries. Mr. Hodgson Pratt, in his inaugural address, urged that a complete change was needed in the relations between capital and labor, and that this change ought to take the form of a true union and amalgamation between them such as the co-operative principle would offer."

INSURANCE.

1850.—1896

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty-six years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-six years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

OFFICERS:

GEORGE H. BURFORD, *President.*

Communications regarding editorial matters should be addressed to the Editor: all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, SEPTEMBER 12, 1896.

Candidate Bryan's letter of acceptance is a short document, which constitutes in effect a brief commentary upon the several planks of the platform adopted at Chicago. Its most noteworthy feature is its avoidance of any extended discussion of the question of free coinage, the question which the action of the Chicago convention has made the issue of the campaign. In touching upon the bond issues, Mr. Bryan condemns the administration for following a precedent established by a former administration, instead of exercising the legal right vested in the United States to redeem its bonds in either gold or silver. He declares against the policy of empowering national banks to issue circulating notes as involving a grant of valuable privileges to a favored class, the surrender to private corporations of control over the volume of paper money, and the building up of a class which will claim a vested interest in the nation's financial policy. Mr. Bryan declares that the greenbacks, being redeemable in either gold or silver at the option of the government and not at the option of the holder, are safer and cheaper for the people than national bank notes, based upon interest-bearing bonds. So it would seem that Mr. Bryan is committed against the retirement of the greenbacks. The letter has attracted singularly little attention, considering Mr. Bryan's position.

Mr. Hobart's speech of acceptance in response to the address of the notification committee was notably definite and vigorous in its reference to the monetary issue, and the same is true of his more formal letter of acceptance which has been made public this week. He declares that he stands unqualifiedly for honesty in finance, and the permanent adjustment of our monetary system, in the multifarious activities of trade and commerce, to the existing gold standard of value, and holds that every dollar of currency issued by the United States, whether of gold, silver or paper, must be worth a dollar in gold, whether in the pocket of the man who toils for his daily bread, in the vault of the savings bank which holds his deposits, or in the exchanges of the world. The money standard of a great nation, he declares, should be as fixed and permanent as the nation itself, and, resting on stable foundations, continuous and unvarying certainty of value should be its distinguishing characteristic. He insists that the dollar of the United States, whether of gold or silver, should be of the full value of one hundred cents, and that by so much as any dollar is worth less than this in the market, by precisely that sum will some one be defrauded.

The necessity of a certain and fixed money value between nations, as well as individuals, Mr. Hobart continues, has grown out of the interchange of commodities, the trade and business relationships which have arisen among the peoples of the world, with the enlargement of human wants and the broadening of human interests, and this necessity has made gold the final standard of all enlightened nations. If, he says, we are to continue to hold our place among the great commercial nations, we must cease juggling with this question and make our honesty of purpose clear to the world. No room should be left for misconception as to the meaning of the language used in the bonds of the government not yet matured, and it should not be possible for any party or individual to raise a question as to the purpose of the country to pay all its obligations in the best form of money recognized by the commercial world. It is desirable, he urges, that we should make it known at once and authoritatively that an "honest dollar" means any dollar equivalent to a gold dollar of the present standard of weight and fineness.

Senator Hill, who has for many years been the leader of the Democratic state organization, and who attracted wide attention by his apparently determined opposition to the leading planks of the platform adopted at Chicago, has maintained up to the present a reticence in relation to his final attitude in the conflict now on which has puzzled almost everybody. The only break in his silence occurred this week on the occasion of his election as a delegate to the Buffalo convention by the Democrats of the assembly district in which he resides. The district gathering, called to choose the delegates, adopted a resolution instructing those chosen to vote for the indorsement of the Chicago platform and candidates. Immediately upon learning of this action through the press the senator addressed a telegram to the chairman of the county committee at Albany declaring his declination to accept the election npon the condition imposed, or upon any conditions which would restrict his freedom to act in such manner as he considered best for the interest of his party. The situation is a rather peculiar one. Senator Hill has been too long accustomed to issuing instructions to take kindly to receiving them from others. At the same time no one presumes to determine from the wording of the senator's declination that his action is caused by a resolution not to indorse the platform and ticket, a rather singular position for a leader to be in.

Speaker Reed is the reverse of a pessimist in politics. In his speech at Portland on Thursday, in which he closed a notable campaign in his congressional district, he declared that while human nature in the United States is very much the same from time to time, it grows steadily better, and that the present free coinage movement is in the last analysis a milder form of the same character of attack made upon the sound currency traditions of the country about two decades ago. He recited the experience of the country under the impact of the greenback craze, and pointed out the beneficent results which followed the laying of that economic heresy. Mr. Reed frankly admitted that the temptation to follow an unsound course was strong among a people only recovering from an immense strain, but declared that the country showed wisdom in refraining from following the suggestions of repudiationist leaders. He made a good point in concluding his speech by asking whether his hearers would be led away into strange pathways or follow the old path that they know, or, in other words, prefer an unlimited check on the rainbow bank of promise or a certificate for what is exactly due on the bank of experience.

The annual report of the Commissioner of Patents for the fiscal year ending June 30, 1896, shows a total of 48,105 applications and caveats received, 24,585 patents granted and trade-marks, labels and prints registered, and 15,580 patents withheld and patents expired. Receipts from all sources during the year were $1,307,090 and expenditures $1,097,368, leaving a surplus of $209,721. The balance in the Treasury of the United States on account of the patent fund on June 30, 1895, was $4,556,757, making a total, with the 1896 surplus, of $4,776,479. Applications awaiting action numbered 8,943. At the end of the fiscal year all but four of the examiners had their work within one month from date, two were between one and two months, and the other two were between two and three months in arrears.

The total equalized value of real and personal property in the state of New York is put by the State Board of Assessors at $4,368,712,903, of which $3,908,853,377 represents the equalized value of the real property. In most of the counties of the state there were reductions from the figures of 1895, but heavy additions were made to the valuations for the counties of New York, Westchester and Queens. The figures given out by the state board disclose two marked features, namely, the comparatively small proportion of personal to real property rated for taxation, and the tendency to increase the amount of taxes contributed by the districts containing the larger urban settlements.

Some information regarding the progress made by the National Forestry Commission has been made public in an interview had with Professor Sargent, the chairman of the commission, at San Francisco, Cal. According to his statement, the commission has been out since July 2, and the members have traveled nearly 1,000 miles by wagon, and made long distances on horseback over elk trails and in all kinds of country. They have been in the Yellowstone Park, in the wild timber regions of northern Montana and northern Idaho, ascended Mount Hood and Mount Tacoma, visited Crater Lake, and also went to the wild Olympic mountains in western Washington and Oregon, the trip ending with a trip through Del Norte county and a portion of Humboldt. It is now the intention of the members to visit the Sierras, San Jacinto, San Gabriel and other places.

Rumors have not been infrequent of late years regarding the intention of representatives of the European powers to put a period to the dominion of the moribund government of the Ottoman Empire. The recent troubles in Crete, following upon the reported outrages upon the Armenians, seem to have produced a deep impression, and the expressions of public opinion in the leading European states may force the hands of their rulers. Public meetings to condemn the Sultan for the Armenian massacres have been called in several large cities in England, and similar meetings are expected to be held in Germany, and perhaps in France. So far the most notable result of the agitation has been the issue of a peremptory note by the British Foreign Office which has prompted an irade from the Sultan ordering that the expulsion of Armenians from Constantinople be stopped. Whether this is premonitory of further decisive action in disposing of the "Sick Man's" patrimony must still remain an open question, however, in view of past experience.

THE GOLD IMPORT MOVEMENT.

Apart from the local disturbance at New Orleans, the general financial situation throughout the country has improved during the past week. At New York in particular the feeling in financial circles is much more confident, and though rates for loans have not relaxed to any extent, the strain that existed a fortnight ago has virtually disappeared. Rates are still upon a level which restricts business both in time loans and commercial discounts, but the heavy arrivals of imported gold are supplemented by the return to the market of funds, probably large in the aggregate, that had been withdrawn in anticipation of a currency famine and possible panic growing out of the silver agitation in the present political campaign.

The important element in this connection has undoubtedly been the gold importations. Last Saturday's bank statement reflected the first effects of the movement by a moderate increase of specie holdings. As the incoming steamers for the past fortnight have been bringing in gold steadily, the total receipts up to the close of business on Friday night foot up $22,738,500, it is to be expected that a considerable gain will be apparent in the averages for the current week to be issued from the Clearing House at noon to-day, even if as is altogether probable the bank troubles at New Orleans have necessitated the transfer of a large amount of currency to that point and other southern cities.

A further feature calculated to afford great satisfaction is the growth of the Treasury gold reserve in connection with the inflow of specie from Europe. It was pointed out in these columns last week that the free gold in the Treasury had already mounted up from $101,000,000 to $103,000,000. This week has witnessed a still larger movement of this kind. Gold importers have in many instances turned their imports into the Treasury in exchange for legal tenders, and this tendency has not been confined to New York, it having been announced that Chicago institutions to which gold was consigned have deposited some $1,500,000 in the Sub-Treasury there. The total deposits of gold up to date amount to about $13,000,000, exclusive of some outstanding Assay Office cheques, which, without doubt, will ultimately find their way into the Treasury. The withdrawal of specie at New York has virtually ceased. Some scattered amounts continue, however, to be taken from the sub-treasuries at interior points, but, in spite of this, the end of the week leaves the gold reserve at $112,172,000, the probabilities being that within a day or so it will pass the $115,000,000 mark, and possibly attain much higher figures. Relief from anxiety concerning the Treasury's position is at this juncture one of the most favorable events that could happen.

It remains to consider the exchange market in its relations to London and the Bank of England. The details of the action taken by that institution in advancing its minimum discount rate and raising the price of American gold are given fully in another column. It was not unexpected, inasmuch as within the last three weeks the bank had lost specie to the extent of nearly £5,000,000, corresponding closely with the amount of $25,000,000 or so that is known to have been taken from London for shipment to the United States. Cable reports showed the action of the bank to be due not merely to this drain to the United States, but to the heavy demands for Egypt and the continent of Europe, which, in the opinion of the London market, point to higher rates in the near future. The open market in London, of course, responded to the action of the bank, discount rising to 1¾ per cent. It is, however, satisfactory to note that exchange rates have adjusted themselves automatically to the new condition thus created, the decline in rates for both bankers' and commercial bills being exactly graded to the difference in money and the price of gold in London, and probably leaving the profit on gold importations against the remittance of commercial bills exactly where it was. This should set at rest the allegations of a part of the London financial press that the decline in exchange and the importations of gold are the result of sheer manipulation by the bankers' syndicate. As a matter of fact, the syndicate has taken no part in the market for fully three weeks, and its handiwork cannot be traced in any way therein. The best feature of the movement is that it seems to be a natural one, and from all appearances is likely to continue for some time.

COTTON PRODUCTION AND CONSUMPTION IN THE SOUTH.

The annual count of the cotton crop is completed, and summarized results of the season's movement, compiled by Mr. Henry G. Hester, secretary of the New Orleans Cotton Exchange, are full of interest. The total commercial crop for the season ending August 31, 1896, was 7,157,346 bales, against 9,901,251 bales in 1894–95, a falling off of almost 28 per cent. This almost startling decrease in production, due in the main to a general curtailment of acreage, followed by an unfavorable season in many parts of the south, saw its greatest manifestation in the southwest. In Texas and Indian Territory the decrease from the phenomenal yield of 1894–95 was almost 40 per cent. In that part of the south which included Louisiana, Mississippi, Arkansas, Missouri and Tennessee the decrease was 27 per cent., or about the proportion of falling off shown in the whole cotton belt, while in the states extending from Virginia south to Alabama the decrease was about 17 per cent. It is, of course, late in the season to discuss the numerous errors made in estimating the crop outturn. But it is of interest to recall that during November and December last year a majority of trade estimates favored a yield of about 6,250,000 bales of cotton, and the commercial crop exceeded this estimate by nearly 900,000 bales.

When the immense falling off in yield is considered, the question of the financial return to the planters should not be lost sight of. As a whole, the season was an unsatisfactory one to the trade, but to the producing interests the crop shortage was almost made up by the improvement in price. The average price for the past season is placed by Mr. Hester at 8.18c. per pound, a gain of more than 2.25c. per pound over the preceding year—about $11 per bale. At this valuation the total commercial crop of the season amounted in value to $294,095,347, a decrease of less than 1 per cent. from the value of the commercial crop of the preceding year. As Mr. Hester well states, it was reasonable to presume that the trifling falling off in the value of the crop would not have occurred, in the face of the strong statistical position, had it not been for depressed and uncertain trade and financial conditions. Indeed, had it not been for these conditions, it is not improbable that the seven million bale yield of last season would have sold for considerably more than the ten million bale yield of the preceding season. The following table shows the movement of the cotton crop to market during the past season, with comparisons for three preceding years:

AMERICAN COTTON CROP FOR FOUR CROP YEARS ENDING AUGUST 31.

	1895–96.	1894–95.	1893–94.	1892–93.
	Bales			
Port receipts	5,420,246	8,006,177	5,940,092	5,088,392
Overland to mills	873,465	1,087,101	931,706	912,146
Southern consumption	904,701	862,838	718,515	743,848
	7,198,412	9,956,116	7,590,313	6,744,386
Less taken by southern mills from ports	41,066	54,865	40,496	44,021
Total crops	7,157,346	9,901,251	7,549,817	6,700,365
Exports.				
Great Britain	2,299,182	3,443,574	2,859,114	2,307,480
France	465,870	774,476	587,299	555,239
*Continent and channel	1,861,116	2,500,911	1,775,784	1,523,639
Canada overland	81,040	99,316	65,690	58,971
Total exports	4,707,208	6,818,277	5,287,887	4,445,338
Stock close of year	223,179	280,091	183,787	242,631
Northern mill takings	1,600,271	2,083,839	1,601,173	1,687,286
Av'ge weight of bale, lbs.	501.92	508.72	490.27	500.37

* Including Mexico.

The ports, therefore, handled less than their proportion of last season's crop, the falling off in receipts there amounting to 44 per cent., while the decrease in the overland movement to mills direct was only 20 per cent. It is of interest to note that the only increase in movement over the preceding year was in the item of southern consumption, about 5 per cent. The takings of northern mills fell off 23 per cent. The southern mills used more cotton owing to the increase in the number of mills and spindles at the south, as a result of a steady removal of a certain class of cotton manufacturers from the eastern to the cotton states. With a good season, however, it is claimed the southern consumption would have shown a much larger gain. The combined takings north and south amounted to 441,000 bales less than in the preceding year, but were 185,000 bales more than in the cotton season 1893–94. As matter of interest, the following brief showing is made of domestic cotton consumption for the past forty-six years:

Year ending August 31.	*Northern mills.*	*Southern mills.*	*Total.*	*Commercial crops.*
	Bales			
1850	475,702	87,067	562,769	2,171,706
1860	786,521	178,107	964,628	4,823,770
1870	866,890	90,000	896,890	3,154,916
1880	1,573,997	221,337	1,795,334	5,761,252
1890	1,789,258	546,894	2,346,152	7,311,392
1892	2,190,766	686,080	2,876,846	9,035,379
1895	2,083,839	862,838	2,945,677	9,901,251
1896	1,600,271	904,701	2,504,972	7,157,346

From this table it is seen that, while southern mill takings have increased more than 300 per cent. since 1880, the gain in consumption by northern mills is less than 2 per cent. Totals of southern mill takings, it should be explained, represent actual consumption. An important item in connection with mill takings is the importation of foreign cotton, which last season was equal to 112,000 American bales. Of this large quantity only a few hundred bales were consumed at the south, practically all having been taken by mills north of the Potomac river.

In a special report Mr. Hester enlarges on cotton consumption at the south. The total number of southern mills at the beginning of the last cotton season was 435. Of these 15 were dismantled, burned or merged into other concerns, while 55 new mills were built, leaving the total number of mills at the close of the season at 475, a net gain of 40 mills. In the preceding season the number of mills added was 63. The total number of spindles at the south is given at 3,693,000, against a total at the close of last season of 3,177,000, an increase of about 516,000 in spindles. Gain in consumption at southern mills was greatest in South Carolina, Alabama and Georgia. Consumption fell off in Kentucky, Louisiana, Missouri and Texas. The average consumption per spindle at southern mills in 1895–96 was the smallest for five years, 142.67 pounds. This was a falling off of nearly 22 pounds per spindle from the preceding season, due mainly to short time and stoppage at some mills. In reply to an inquiry by Mr. Hester as to whether southern consumption has been affected by unfavorable trade conditions within the year, one-third of the spindles reported in the affirmative, 53 per cent. were in the negative, and the remainder were that they were slightly affected one way or the other. This would indicate that concerns having more than one-half of the spindles of the entire south experienced no ill effects from the depression of last season. It is of interest to note that at the close of August, 1896, only 8.5 per cent. of the total number of southern spindles were idle. The consumptive capacity of southern mills is placed by Mr. Hester at 1,303,000 bales, and with good trade this year, he thinks, a consumption at the south of 1,200,000 bales is not improbable. The leading state in number of spindles at the south is South Carolina, with 1,192,000 spindles. Next to this are North Carolina, with 950,000 spindles, and Georgia, with 680,000 spindles. These three states, in fact, contain 75 per cent. of the total cotton-spinning capacity of the south. The takings of the mills of the United States in 1895–96 were 48,173 bales per week, or 208,748 bales per month, against respectively 56,667 bales and 245,556 bales for like periods in the preceding season. Of the monthly takings 133,000 bales went to northern mills and 75,000 bales to southern mills, pointing to a consumption at the north of about two-thirds and at the south of one-third of the domestic cotton takings.

PROFIT TO SILVER AND GOLD MINE OWNERS.

To the Editor of BRADSTREET'S:

SIR—Some one sends me a copy of BRADSTREET'S of September 5, containing my letter on the "Profit to Silver Mine Owners," with a question put against the following passage:

"Messrs. Newlands and Bryan offer to silver miners the power to force the silver which costs them fifty cents (50c.) an ounce or less upon the community at a rate of one dollar and twenty-nine cents per ounce."

The correspondent meets this with the following question:

"Does not the free coinage of gold profit the gold miner in the same way? Twenty Cripple Creek mines produce gold that cost twenty-five cents (25c.) to the dollar's worth of gold. Why discriminate against the silver miner and favor the gold miner?"

It is doubtless true that there are many gold mines which make a very large profit by bringing their standard gold to the mints for coinage, the act of coinage certifying the weight and quality either of the dollar, the sovereign or other gold coin minted by other nations. The name and the stamp then give to the gold coins a certificate of each government to the effect that the dollar contains twenty-five and eight-tenths ($25\frac{8}{10}$) grains of gold, nine-tenths ($\frac{9}{10}$) fine; the stamp upon the sovereign is the certificate of the government of Great Britain that each sovereign contains 113.0016 grains of gold. These coins then pass into use, but, unlike the silver coins, they require no act or force of legal tender to induce people to take them. In international commerce there is no such act of force or legal tender,

Hence there is no preference or discrimination. Every man to whom a debt is owing about which there is no other dispute accepts payment in gold readily and willingly; no conception of an act of force or legal tender enters into the transaction.

In the conduct of international commerce the unit or monetary term is "pound sterling." There is no coin of that name. The equivalent of a pound sterling is a sovereign so long as it is unworn, but a draft or bill of exchange in pounds sterling can only be liquidated or satisfied by weighing out the coins, and not by counting them.

If the advocates of the free coinage of silver at 16 to 1 would accept a free coinage act either without any act of legal tender in respect to either gold or silver coins, or with an act of legal tender for the enforcement of contracts in gold or silver according to the name and not by option in one or the other, the whole claim of the advocates of free coinage could be granted, and they themselves would then never take any silver to the mint to be coined, because they could not force it upon the community. In other words, there is no discrimination in favor of gold under existing laws, and none is needed.

EDWARD ATKINSON.

Boston, September 8.

GROSS RAILROAD EARNINGS FOR AUGUST.

August railroad earnings are only what might have been expected, in view of the depression which was evident in nearly all lines of trade during a month which, at best, does not exhibit much activity. That only a small decrease is shown from a year ago is, of course, a matter for congratulation, inasmuch as the decrease reported is the first recorded for more than a year. Examination of records shows that not since February, 1895, has there been a decrease in gross earnings reported as compared with the same month in a preceding year.

The total earnings of 104 railroads, embracing 87,000 miles of roads, for the month just closed aggregates $36,622,689, a decrease of 2.4 per cent. from August last year, in which month, it may be recalled, earnings showed a gain of 1.5 per cent. from August, 1894.

The increases and decreases shown in each month for the three years make the following comparison with the month of August:

	1895.	1894.	1893.
September	Inc. 4.6	Dec. 5.3	Dec. 9.5
Nine months	Inc. 4.5	Dec. 13.0	Dec. .5

Totals, U. S.	Inc. 2.6	Inc. 7.3	Inc. 4.0	Dec. 2.9	Inc. 5.4
Mexican	Dec. .9	Inc. 2.3	Inc. 10.8	Inc. 9.1	Inc. 4.2
Totals	Inc. 2.4	Inc. 7.1	Inc. 4.1	Dec. 2.4	Inc. 5.3

By far the worst showing made by any group of roads is that reported by the central western group, a decrease of 11.7 per cent. The other groups reporting decreases are the trunk lines, 4.9 per cent.; southern roads, 2.2 per cent., and the southwestern roads, four-tenths of one per cent. decrease. The granger roads show a gain of half of one per cent., the coal roads 2.2 per cent., and the Pacific roads 2.9 per cent. The Mexican roads show a larger gain than any American group—9 per cent.

Of the 104 companies making comparisons with August a year ago 65, or about two-thirds, show decreases, and only 32, about one-third, show gains. The large increases are fewer than for a long time past, as will be seen from the following table:

	Increases.
Great Northern system	$274,087
Missouri, Kansas & Texas	102,218
Canadian Pacific	199,000
Mexican Central	57,051
Mexican National	51,086
Total	$683,442

Important decreases are, on the other hand, much more numerous.

	Decreases.
Chicago, Milwaukee & St. Paul	$138,629
Baltimore & Ohio Southwestern	50,923
Cleveland, Cincinnati, Chicago & St. Louis	173,292
Pittsburgh & Western	64,679
Toledo & Ohio Central	53,416
Wabash	210,674
New York Central	265,825
Louisville & Nashville	80,750
Southern	109,636
Kansas City, Fort Scott & Memphis	57,197
Missouri Pacific & Iron Mountain	80,000
Northern Pacific	59,106
Total	$1,342,127

The total earnings of 102 railroads for eight months ending August 31 this year aggregate $279,885,463, a gain of 5.3 per cent over a year ago, this gain following an increase of 4.2 per cent. in 1895 over 1894. In this eight months' period the heaviest increase shown is that by the granger roads, 13.9 per cent., the Pacific roads following with a gain of 11.1 per cent. Other groups reporting gains are the trunk lines, 2.1 per cent., coal roads 1.2 per cent., and the southern roads 7.3 per cent. Decreases are, as a rule, fractional, those shown by the central western and southwestern roads being less than 1 per cent.

THE DOMESTIC WOOL CLIP OF 1896.

To the Editor of BRADSTREET'S:

SIR—The National Association of Wool Manufacturers has recently completed its annual estimate of the wool clip of the United States for 1896, and the results arrived at are striking and interesting. The estimate is based, as heretofore, upon the return of the Department of Agriculture of the number of sheep in the country on April 1, 1896, the return showing a total of 36,464,405 sheep, which is a loss of 3,484,983 sheep since the last report, and the smallest total reported by the department since 1875. The clip of these sheep is estimated, following the English method, by ascertaining, by extensive correspondence with growers, dealers and manufacturers, the average weight of the fleeces in the several states, and multiplying the number of sheep in each state by that state average. This has long been accepted as the most feasible method of arriving at the approximate total clip of the country. The results of the inquiry for the year 1896 are given in the following table:

WOOL PRODUCT OF THE UNITED STATES, 1896.

States and territories.	*No. of sheep April 1,* 1896.	*Average weight of fleece, pounds.*	*Wool, washed and unwashed, pounds.*	*Per cent. of shrinkage.*	*Scoured wool, pounds.*
Maine	251,071	6	1,506,426	43	858,663
New Hampshire	84,149	7	589,043	58	247,398

South Dakota	312,561	6	1,875,366	63	693,885
Idaho	973,402	7½	7,300,515	68	2,336,165
Montana	2,969,657	7½	21,530,013	66	7,326,204
New Mexico	2,595,652	4¾	12,329,347	54	5,671,500
Utah	1,902,516	8	11,415,096	66	3,881,133
Washington	732,143	7	5,125,001	70	1,537,500
Wyoming	1,296,134	8	10,369,134	68	3,318,123
Oklahoma	21,987	7	153,909	67	50,790
Total	36,464,405	6.38	232,474,708	60.7	91,284,579
Pulled wool	....	....	40,000,000	40	24,000,000
Total product	....	....	272,474,708	...	115,284,579

To a fleece product of 232,474,708 pounds is added in the above table the pulled wool,

estimated at 40,000,000 pounds, making the total clip of the year 272,474,708 pounds in the greasy or washed condition, and equivalent to 115,284,759 pounds of clear wool. This is a decrease from 294,295,726 pounds in 1895, and is the smallest product of wool since the year 1880. The decrease in clip is relatively less than the decrease in number of sheep, because of the gradual increase in the weight of fleeces since 1875. The average weight of fleeces for the whole country in 1896—6.38 pounds—is a slight increase over the previous year, when it was returned as 6.37 pounds per fleece. In 1888 and 1889 it was 6 pounds, and it has been gradually increasing, with a corresponding increase in the percentage of shrinkage, which has never until this year averaged 60 per cent. The total supply of domestic wool for the past ten years has been as follows:

FLEECE AND PULLED WOOL IN THE GREASE.

	Pounds.	*Decrease.*	*Increase.*
1887	302,169,950	20,861,076	....
1888	301,876,121	293,829	....
1889	295,779,479	6,096,642	....
1890	309,474,856	....	13,699,377
1891	307,401,507	2,073,349	....
1892	333,018,405	....	25,606,898
1893	348,538,138	....	15,519,733
1894	325,210,712	23,327,426	....
1895	294,296,726	30,913,986	....
1896	272,474,708	21,822,018	....

The apparent supply of wool available for the use of our manufacturers for the year, exclusive of future importations, is as follows:

	Pounds.
Wool clip of 1876	272,474,708
Domestic wool on hand January 1, 1896	102,634,500
Foreign wool on hand January 1, 1896	31,533,300
Foreign wool imported January 1 to July 1	101,807,086
Total	508,449,594

This is a reduction of about 40,000,000 in the visible supply as compared with one year ago. But the comparatively small consumption of wool to date, owing to curtailment of manufacture, justifies the conclusion that the actual available supply is very much larger than these figures indicate, and that the residue is carried in the storehouses of the manufacturers awaiting a revival of business. It is thus evident that supplies are far in excess of any probable consumption during the year to come, and that no great improvement in the prices of the raw material can be looked for until this vast bulk of raw wool has been materially reduced. It is this condition of things which keeps the American wool market a nominal one, with prices so far below the foreign prices of colonial wools of corresponding grades that the attempt to find foreign markets for domestic wools still continues. The unfamiliarity of foreign manufacturers with our American wools must be counted as the chief reason why the export movement does not take on larger dimensions.

A comparison of the prices of sixty varieties of domestic wools in the Boston market shows an average fall of 42 per cent. as compared with the prices which obtained in April, 1890, while similar comparisons of the London prices of colonial wools at the two periods indicate a gain of about 10 per cent. The 42 per cent. decline in American prices represents, therefore, something more than the difference in price due to the duty on wool. Contrary to all expectations, the removal of the duty did not effect an advance in wools abroad, which would have saved our growers some part of the price which that duty insured them above foreign prices. If the transition had occurred at a time when the American mills had been fully employed, the result would in all probability have been different. As it is, domestic wool prices can hope for no gain from the shortage in the Australian clip. Ordinarily, any conditions which involved a decrease of 76,000,000 pounds in three years in a clip so important as that of the United States would materially affect the world's prices; but the unprecedented condition of manufacturing here leaves the curtailed domestic supply far in excess of present requirements, and is not without its influence in depressing foreign markets. S. N. D. N.

Boston, September 9.

DENVER & RIO GRANDE'S REPORT.

The statement of the Denver & Rio Grande Railway for the fiscal year that has just ended is of interest for a variety of reasons. The system does not rank among the large ones of the country, possessing, as it does, less than 2,000 miles of track all told (mostly narrow gauge). It is, however, located almost altogether in the mining district of Colorado. It depends for traffic upon the prosperity of the mining industry, and its earnings may be taken as a fair index of the general condition of the section through which its lines extend. At the same time the reorganization of the property in 1886 affords the earliest example of the new principles that now obtain universally in connection with the reconstruction of bankrupt railroads. The old Denver & Rio Grande went under in 1894 in consequence of a policy of undue extension and excessive capitalization. It was reorganized upon the principle that fixed charges must be limited to the amount of the earning power, as shown under the worst possible circumstances. This was carried out, notwithstanding the severity of the sacrifices it necessitated on the part of the original holders of the company's securities, and the results since have gone to show its wisdom, the company, notwithstanding the fact that dividends upon the preferred share capital have been temporarily suspended, having shown an ability to meet its fixed charges and to keep its solvency unquestioned under the most adverse conditions.

The report for the fiscal year ending June 30, 1896, shows the following comparisons with the results of the preceding fiscal year:

Year ending June 30.	1896.	1895.	*Changes.*
Gross earnings	$7,551,187	$6,916,841	Inc. $634,346
Operating expenses	4,348,780	3,991,212	Inc. 357,568
Net earnings	$3,202,406	$2,925,629	Inc. $276,771
Other income	57,334	14,600	Inc. 42,734
Total income	$3,259,740	$2,940,229	Inc. $319,481
Fixed charges	2,568,350	2,411,538	Inc. 156,812
Balance	$691,390	$528,691	Inc. $162,699
Dividends on preferred	473,000	....	Dec. 473,000
Surplus	$218,390	$528,691	Dec. $310,301

The fixed charges for the year just ended, it should be observed, include $143,508 expended out of earnings for new equipment, and in both years given in the table the same item is inclusive of taxes and insurance, which, however, differ but little in the years under consideration. It may be also noted that of the gain in gross receipts the item of passengers displays an increase of 26 per cent., compared with one of 15 per cent. in freight. The total receipts from traffic were 17 per cent. larger than in 1895, while it may be recalled that as compared with 1894 the returns of 1895 were about 30 per cent. smaller, indicating how severely the prostration of the silver-mining industry affected the earnings of the railroad company now under consideration. The natural conclusion from the figures now submitted would be that the renewed activity of the mining districts, particularly in connection with the new gold "strikes," has in a large measure compensated for the shrinkage of traffic that originated from the silver-mining industry of the south.

It should also be noted that, like other carefully managed railroads, the Denver & Rio Grande has celebrated the return of better traffic and earnings by prompt efforts to restore the condition and efficiency of its rolling stock, and by efforts to repair the damage necessarily done through the effort to cut down expenses to the lowest level in 1894 and 1895. The $143,000 above noted as having been expended for equipment was only a portion of the total outlay under this head, which amounted in all to $357,000.

THE ST. PAUL REPORT.

The report of the Chicago, Milwaukee & St. Paul Railway for the year ending June 30 last is important not only in the sense of exhibiting very favorable operating results on one of the most conspicuous western systems, but because it also shows that the results in question were attained in a large degree by the economization of operating cost, but without any apparent deterioration of the property. During the hard year 1894 the St. Paul management was conspicuous for the heavy reduction of operating cost on its lines, and it was for a time believed that the relative maintenance of net earnings thus secured was at the expense of the physical condition of the road and its equipment. The report for the year just ended would indicate that, in spite of the increase of traffic—the number of tons of freight moved having been 12,210,055, against 10,475,942 in 1894–95—a conservative course has been pursued. More liberal expenditures on the property have followed as a matter of course, but the St. Paul management, which can now be fairly ranked as among the best in the country, has not been hurried into any extravagance. No increase in the mileage of the system was indulged in, and the conservatism which has guided the company's counsels is strikingly shown by the fact that while 3 per cent. was paid on the common stock as dividends, the amount actually earned above fixed charges and dividends on the preferred was equal to over 7 per cent. on the common, the surplus over all dividends being $2,173,260, against a deficit of $402,735 in 1895 and a surplus of only $33,144 in 1894.

The figures showing the revenue and expenditures for the year just closed compare as follows with those of the preceding year:

	1896.	1895.	*Changes.*
Gross earnings	$32,681,829	$27,335,369	Inc. $5,346,460
Op. exp. and taxes	19,676,808	17,043,753	Inc. 2,533,055
Net earnings	$13,005,021	$10,291,616	Inc. $2,713,405
Other income	64,857	134,647	Dec. 69,790
Total income	$13,069,878	$10,426,263	Inc. $2,643,615
Fixed charges	7,669,488	7,629,377	Inc. 40,111
Balance	$5,400,390	$2,796,886	Inc. $2,603,504
Dividends	3,227,130	3,199,621	Inc. 27,519
Surplus	$2,173,260	def. $402,735	Inc. $2,575,995

The fixed charges, it should be observed, include the premium paid for bonds acquired for the sinking fund, and the dividends in both years were at the rate of 7 per cent. per annum on the preferred stock and 3 per cent. on the common stock respectively. The report makes a satisfactory statement with respect to the condition of equipment. It says in substance that the rolling stock replacement fund amounted to $260,610 at the end of the previous fiscal year. In the last year $362,706 was added to the fund by charging to operating expenses the cost of making good the losses which occurred during the year, and there was then expended out of the fund $364,910 for actual replacements. The unexpended balance ($258,406) is sufficient to replace the shortage of equipment of 572 cars. The capital stock was increased in the year by $739,000 preferred stock, issued in exchange for the same amount of convertible bonds canceled. The funded debt was increased by $579,000 general mortgage 4 per cents for additions and improvements to the property, and $183,000 general mortgage 4s were issued in exchange for underlying bonds paid and canceled. There have been deducted $739,000 for convertible bonds in exchange for preferred stock, and $183,000 for other bonds paid and canceled, leaving a net decrease of $160,000 since the last report. It is also to be noted that capital expenditure for the year amounted to $611,719, the principal items being for equipment $387,815, ballasting of track $115,036, and side tracks $56,753. About 23,000 tons of new steel rails were laid. The expenditure for renewals and repairs per mile was $1,189, as against $940 per mile in 1895. It is also deserving of notice that the total expenditure for labor during the year under consideration was $12,460,923, compared with $10,979,625 in the preceding year.

In the case of the St. Paul road, as with other railways, the traffic statistics are of the greatest importance. The following tabulation, covering the figures for the fiscal year ending June 30, 1896, compared with the two preceding years, is of decided interest:

Year ending June 30.	1896.	1895.	1894.
Tons freight	12,210,055	10,475,942	10,794,058
Passengers	7,427,614	7,235,290	7,921,882
Gross per mile	$5,311	$4,438	$5,096
Net per mile	2,113	1,670	1,824
Rate per ton per mile	1.003c.	1.075c.	1.037c.
Rate per passenger per mile	2.357c.	2.396c.	2.169c.

The increase in the company's freight tonnage was at the rate of 16½ per cent., and it is to be remarked that of the various classes of freight carried the gain in the volume of all agricultural products was 37⅝ per cent. The percentage of operating expenses, including taxes, for the year just ended was 60.21 per cent., as against 60.35 per cent. in 1895 and 64.21 per cent. in 1894. At the same time the average load per train was 167 tons, against 152 tons last year, being the largest train load in the company's history, and a subject for comment in connection with the operation of western railroad properties.

THE BRITISH TRADES UNION CONGRESS.

The Trades Union Congress, which met in its twenty-ninth annual convention at Edinburgh this week, was constituted somewhat differently from some of its predecessors. The delegates were fewer in number than formerly, owing to the operation of the new standing orders, and they consisted of bona fide workers at their trades and the legal members of trade societies. Under the new system no person is entitled to act as a delegate unless he is actually working at his trade at the time of his appointment, or is a permanent paid working official of his trades union. Though the delegates were fewer, there were, however, about thirty more trades unions represented this year than last. The programme of the congress was a rather ambitious one, and some of the propositions advanced for action were decidedly radical. One of the resolutions proposed declared it to be essential to the maintenance of British industries to nationalize the land and the whole of the means of production, distribution and exchange, and instructed the parliamentary committee to promote and support legislation with that object in view. Another resolution declared that the time had arrived when the hours of labor should be

limited to eight hours per day in all trades and occupations in the United Kingdom.

As usually happens, however, much more is proposed by the radical members of such a body than is finally supported by the body as a whole. Such proved to be the case with the resolution regarding the nationalization of industries. Before its adjournment the congress passed a resolution substituting for that referred to another declaring it to be essential to the maintenance of British industries to nationalize the land, mines, minerals, royalty, rents and railways, and municipalize all water, artificial light and tramways undertakings within their several jurisdictions.

The report of the parliamentary committee took conservative ground in expressing doubt as to whether it would be prudent for the Trades Union Congress to associate itself with meetings like that of the International Socialist Congress, recently held in London, though declaring that trades unionism and coöperation should work together. A resolution was, however, adopted declaring that it would be better to alter the basis of representation for international congresses rather than to repudiate the principle of international brotherhood of labor.

The congress adopted by a large majority a resolution declaring that the eight-hour working day is one of the most important preliminary steps toward the ultimate emancipation of the working classes, and will lessen the number of unemployed, improve the quality of work, and increase the health, strength and intelligence of the workers; that the congress thinks that the time has arrived when the hours of labor should be limited to eight per day in all trades and occupations in the United Kingdom, and that the parliamentary committee be instructed to draft a bill on the lines of this resolution, with a view to getting it passed through Parliament and made a law of the country. The congress also passed, without a division, a resolution declaring that, in order to place the law relating to employers' liability on a more equitable basis and to make it more conducive to safety, the existing act should be amended so that, among other things, the responsibility may rest upon the employer for the acts of his employees, or of those of any sub-contractor, and that, irrespective of the acquiescence in or knowledge of any defect or danger on the part of the person killed or injured; that its provisions may apply to the workers in all industries on land or sea, in private, state or municipal employment, and that contracting out of the act be made illegal, with other alterations, such as the extension of the period of notice, the removal of the maximum limit of compensation, and the simplification of legal procedure, including the presentation by the defendant of a statement of defense—any allegation of contributory negligence to be clearly set forth therein. Other resolutions adopted by the congress declared that trades unionism and coöperation, both distributive and productive, have been of considerable value to the workers, and should receive their earnest and material support; that where differences arise between trade unionists and coöperators the matter be immediately referred to the joint committee of trade unionists and coöperators, or to impartial referees mutually agreed upon; that the Truck Act Amendment bill introduced by the late Home Secretary is non-effective as a protection to the workers against the deductions from wages, in so far as the signing of a contract may frequently be made the condition of the worker's obtaining employment, and that there should be urged upon the government the need for introducing an amended measure providing that no contracting out on the part of the worker, by written agreement or otherwise, shall in any degree affect the illegality of such deductions as are in question from the wages, and that in case the government should refuse to introduce such a bill, the parliamentary committee be further instructed to prepare a bill and use every effort to secure its becoming law.

GOLD RESUMPTION IN AUSTRO-HUNGARY.

It is now four years since the dual monarchy decided upon the resumption of specie payments under a gold standard, and to carry out this reform instituted a series of financial operations that have left a deep impression upon the money markets of the world. The market here, at any rate, retains vivid recollections of the manner in which gold was attracted from this country to Europe in consequence of the arrangements made between the Austro-Hungarian government and the syndicate of bankers headed by the Vienna branch of the Rothschilds, who undertook the floating of the new loans.

It will be remembered that the Viennese stock market, rejoicing in the apparent success of the financial plans of the government, indulged in a prolonged and rather excessive speculative inflation. This, however, did not conceal the fact that up to this time the actual establishment of a gold currency in place of the paper money that has so long served as a circulating medium for the country is still lacking. The tangible steps taken in this direction were of a threefold nature. The old currency, of which the florin was the unit, was abolished, and the crown, two of which were equivalent to the florin, was established in its place. The second step was the contraction of the gold loans abroad, as already referred to. Finally, the old state paper notes, amounting to 312,000,000 florins, were withdrawn, and in their place increased issues of the Austro-Hungarian Bank were substituted, raising the circulation of the latter institution from $244,000,000 at the end of 1892 to $300,000,000. This operation was in effect the substitution of one kind of paper currency for another. As the London *Financial News*, from which these figures are drawn, remarks on the subject: "Both Austria and Hungary have, therefore, increased their bonded gold debt by hundreds of millions as a preliminary preparation for the ultimate currency reform, and as the new loans were entirely raised abroad, their service entails a much greater annual loss of gold than was required heretofore, on account of foreign borrowing."

The same journal also points out that, in order to provide for an actual gold circulation, Austro-Hungary will have to possess a much larger stock of metal than in a country where banking facilities are plentiful and are universally employed in the every-day concerns of internal commerce. In the United Kingdom, for instance, where payment by check is the rule rather than the exception, the gold circulation amounts, nevertheless, to about £3 5s. per head of population, while in France it is £4 13s. 6d. per capita. Yet so far, the writer in the paper named asserts, the total stock of gold held by the Austrian and Hungarian governments or in the national bank and available for gold resumption is as follows:

In Austria, gold for currency purposes	£15,000,000
In the Austro-Hungarian Bank, gold reserve	*12,500,000
Free gold held by the Austrian government	2,500,000
Gold held by the Hungarian government	9,170,000
Total	£39,170,000

* Both sums are in the bank.

This, for a population of 45,000,000 or so, is less than $5 per capita. It is true that the financial departments still have authority to issue bonds, but the amount of gold that can be secured thereon is small in comparison with the requirements. There is, it would seem, virtually no gold yet in circulation, and all that has been collected with so much effort during the last four or five years still falls short by nearly $100,000,000 of the amount that, on the smallest calculation, is required to make specie resumption on a gold basis effective.

The balance of trade, too, is not in favor of the dual monarchy. The article from which quotation is made states that in 1888 the exports showed an excess of 196,000,000 florins, in 1889 of 177,000,000 florins, in 1893 of 135,000,000 florins, in 1894 of 87,500,000 florins, and in 1895 of only 15,400,000 florins. This adverse change is partly due to a growing purchasing power, but still more to the decline of the exports. It is pointed out that this movement of the country's foreign trade is likely to continue, because Hungary is less able to compete with other producing lands as to cereals, while Austrian industry is generally backward and dependent on a few specialties. The article goes on to say that "under these circumstances there is no chance whatever that gold can be attracted, except by fresh borrowing—a very sad alternative for a nation already too heavily indebted abroad. It is impossible to state accurate figures, but as nearly the whole of the Austrian and Hungarian gold rente, besides hundreds of millions of paper issues, are held by German, French, Dutch and English investors, and the bonds and shares of the South Austrian and state railways, as well as the bonds of the Hungarian savings and mortgage banks, are also to the largest extent in foreign hands, the calculation, made by an Austrian professor, that the dual monarchy pays an annual tribute of 130,000,000 florins, or £11,000,000, in the shape of interest, dividends, etc., to foreign creditors, is by no means exaggerated. * * * Borrowing ad infinitum is out of the question, and happily so, for if continued much longer the country would become dangerously involved. No nation with an effective gold standard is greatly indebted to foreign capitalists; on the contrary, it replenishes its supply with the interest derived from its investments abroad. Thus it is with us, with France, and, to a minor degree, with Germany, while Italy cannot help the depreciation of her exchange, because she is a debtor country. In Austria-Hungary things are worse. The enormous capital she has borrowed abroad will form a permanent hindrance to the maintenance of her exchange at par, and the actual resumption of cash payments is almost certain to remain a myth."

DISPLACING BRITISH TRADE.

English and other foreign newspapers continue to be filled with discussions of the more or less serious effects on British trade of the competitive efforts of foreigners in neutral as well as in colonial markets.

The Governor of Hong-Kong, having appointed a committee, in response to Mr. Chamberlain's circular to all colonial governors, to inquire what, if any, displacement of British goods has taken place in that market, a report has now been issued in which the committee state that it is apparent from the evidence that the displacement of British goods has been going on steadily for some years. But it has not been on a strikingly large scale, nor have many great staples been seriously affected. There are instances, however, in which British manufactures have been entirely ousted by foreign goods, such as llama braids and aniline dyes, while others, such as Spanish stripes and broadcloths, have been in a great measure displaced by similar goods imported from Germany. In other cases, again, there have been attempts to injure British trade in smaller wares by foreign imitations, with, however, only a qualified or temporary success. But there has been a serious falling off in the Chinese imports of metals from Great Britain, notably in that of "yellow metal," which formerly was exclusively imported from thence. It is estimated that only about half this import now comes from British makers, the inferior German metal being greatly aided by the lower rate of freight payable from German ports. This applies to the trade also in bar iron, nail, rod and scrap iron, most of which is now imported into China from Belgium. Belgian manufacturers are helped by cheaper production and lower freights from Antwerp. Pig lead, which was formerly imported from England and Germany, now comes almost exclusively from Australia, on account of lower cost of production. The trade in arms, ammunition and gunpowder is monopolized by continental manufacturers, owing to the much cheaper prices at which they can lay them down in the market. The trade in candles has been completely wrested from England by Belgian makers, this being to a great extent due to superior packing.

The competition of Japan is only just commencing, "but it promises to prove serious later on." The causes to which the displacement of British goods is to be assigned are stated thus by the committee: (1) lower cost of production of rival foreign goods; (2) disinclination of British manufacturers to study taste of consumers; (3) the steadily falling value of silver since 1873; (4) lower freights outward from foreign as compared with British ports; (5) cheaper railway transit to foreign ports of shipment.

The committee make special reference to the advantages conferred on American cotton piece goods in the China market by the rates of freight charged by the China Conference steamers from New York to Hong-Kong and Shanghai, which average from 25s. to 30s. per ton, as compared with 57s. 6d. from London and Liverpool outward. The same remarks apply to the shipment of machinery from the United States to China, the freight for which is about 40 per cent. lower than that from British ports.

Another English journal says that foreign manufacturers are prepared to undertake orders that "would not pay their British competitors," either because the contracts offered are too small or because the pattern is likely to be short-lived. The comment on this state of affairs is that "foreign manufacturers" have to undercut the established English manufacturer and exporter "in order to get a footing at all," and that that footing is often, if not generally, obtained not only without profit on particular transactions, but at substantial loss.

The conclusion drawn by one London

paper is somewhat inconclusive, taking the form of a question: "Is it worth the while of the English exporter to attempt competition on the same lines rather than run the risk of having his business taken over by others?"

In elaborating the working out of such a policy the London *Iron and Coal Trades Review* says:

There are generally two methods in vogue for overcoming industrial rivals. One is to starve them out, as the Standard Oil Company has done in the United States, and as the Nettlefolds (with the aid of Mr. Chamberlain) are said to have done with their rivals in the screw industry in this country. The other is to seek to secure preferential custom by offering a better article at a correspondingly low price. It is apparently the opinion of English manufacturers that the latter method will pay best in the long run, and they have, therefore, acted on that principle. Are they right or are they wrong? Would we have heard less of foreign competition if our English manufacturers, who were already established, had forsaken their ancient and reputable ways, and adopted the often-times miserable expedients recommended by continental practice, in order to force trade out of its old ruts, by dangling in the face of buyers the equivocal bait of a temporary abatement in price, allied to generally inferior quality? We are bound to admit that, in our opinion, we are called upon to fight our rivals with their own weapons. The English conscience and the British stomach reject the idea of "cheap and nasty" productions, but, if the people who are expected to buy will have such goods, and will take their custom elsewhere unless we supply them—why, then, we have hardly any choice. We must, at any sacrifice, retain our markets, or we must cease to manufacture. The average buyer does not greatly care whether the things he is about to buy are of English or German origin. He wants them of a particular pattern, at a particular price, and, as he pays the piper, he insists on choosing the tune, which is reasonable. We therefore counsel our manufacturers—although not, we confess, without some trepidation—to carefully watch the methods and tactics of their competitors, and to checkmate them at every turn, using every honorable means to do so, and even making temporary losses, in case of need, in order to retain markets of tried value, or secure possession of new ones. If this is done persistently and on a sufficiently large scale, we believe that British enterprise and skill and business resource will prove equal to any emergencies that are likely to arise.

The London Chamber of Commerce is exhibiting samples sent home from Trinidad, Bermuda, Bahamas, Barbados and St. Lucia, specimens of foreign-made apparel of various kinds for men, women and children, cotton goods, cordage and twine, hardware and cutlery, hats, boots, implements and tools, leather, silk, woolen and worsted goods and refined sugar. The display brings before the British public what is, perhaps, only the first of many facts which this, Mr. Chamberlain's, inquiry will lay bare—namely, "that foreign manufacturers have obtained a footing in the markets of British colonies because, for one reason at least, they are willing readily to adapt themselves to the peculiar conditions of particular trades."

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

According to the statistics given in that valuable annual publication *The Mineral Industry*, the statistical supplement to *The Engineering and Mining Journal*, the total value of the mineral and metal production of the United States in 1895 amounted to the enormous sum of $673,881,505, which compares with a similar total of $578,470,058 for 1894, showing a total increase of $95,411,447 for the year. Of the whole amount last year $240,615,120 represented the value of the metals, $433,266,385 that of the non-metallic products, including $5,000,000 for various unspecified products. From these totals, however, it is necessary to make some deductions for articles which have been necessarily duplicated. Among these is the iron ore used in making pig iron; a large part of the lead used in making white lead; the zinc used in making zinc oxide; the coal in making coke; the antimony ore used in making the metal; the manganese ore employed in making spiegeleisen, which is included in pig iron, and some other articles of the kind. A careful estimate of the proper amount of these deductions would give about $45,000,000 in 1895, against $34,000,000 in 1894. Making these deductions, there is found a total net value for 1895 of $628,881,505, as against $544,470,058 for 1894, the increase amounting to $84,411,447, or 15.5 per cent. Attention is called to the fact that the totals given are of values only, as it would be impossible to present a total of quantities made up of such varied products, and that it must be remembered that to make the comparison a fair one the quantities of the various articles produced should be considered.

Last month, when the *American Manufacturer* presented the condition of the blast furnaces at the opening of August, it stated that while there had been a constant decrease in furnace operations for the previous three months, the August report showed the greatest drop. That reduction, however, has been exceeded by the latest figures, which are the lowest recorded for more than two years. Its latest monthly blast-furnace report shows that at the beginning of September there were 144 furnaces in blast, with a weekly capacity of 145,979 tons. The number out of blast at that time was 315, the united capacity of which was 197,880 tons per week. A comparison of the situation at the beginning of the present month with that of July 1 shows a net decrease of 25 in the list of active furnaces, and a total decrease of 33,207 tons in the weekly capacity. Just now there are fewer blast furnaces in operation than there have been at any time since August 1, 1894.

The paper named says: "The general pig iron situation seems to be fast approaching some definite movement. For months past each report has shown further reduction in producing capacity. Pig iron makers have evidently come to the conclusion that there is no use piling up stock, and that present prices are too near the actual cost of production to be accepted for large quantities or carried any great distance into the future. Hence the general desire among the furnaces to curtail output and bank down whenever practicable." The following is a showing of the number of furnaces in blast at present, as compared with that at the corresponding period last year:

	—*Sept. 1, 1895.*— No.	*Weekly capacity.*	—*Sept. 1, 1895.*— No.	*Weekly capacity.*
Charcoal	21	4,689	25	7,531
Anthracite and coke	49	31,744	30	19,179
Bituminous	149	176,057	89	119,269
Total	219	212,490	141	145,979

A comparison of the figures to-day with those of this time a year ago shows 75 furnaces fewer in operation and a reduction of 66,511 tons in the weekly capacity. "It is hardly fair, however, to compare the status of affairs to-day with that presented September 1, 1895. At that time there was a fast increasing activity in pig iron production, and the boom which ran up production every month until the close of the year was beginning to be felt. The situation of to-day is more like that shown at the opening of September, 1894, although somewhat worse."

In an address delivered before the Buffalo School of Finance on Saturday last Mr. William C. Cornwell, president of the City Bank of that city, described the economic function fulfilled by a bank, and incidentally had something to say about the composition of the money power. "A bank," he said, "is one of the machines of business. The capital is generally furnished by hundreds of people, most of them in moderate circumstances, who take shares of stock and put in the money to start with. The greater part of the bank's money is, however, the property of small depositors and business men, hundreds and thousands of them for each bank, and the average amount placed on deposit by each is small. Taken altogether, however, the whole makes up a very large sum, which the bank officer is expected to loan out and invest safely, but must always be ready to pay back to the depositors in cash. The banker then, against whom we hear so much abuse from ignorant quarters, is the paid servant who looks after the interest of the entire institution, the interests of thousands of people in each institution, and although he must have more experience than the man who digs or the man who takes care of horses, he is, nevertheless, 'a hired man.' The bankers of the United States," he continued, "are mainly trustees of the people's money, employed on salary, and expected to so conduct the affairs of the bank that the greatest benefit will come to the stockholders, to their depositors, to the whole business of the locality, by means of careful loaning. Each bank, savings bank and trust company is made up in about the same way. Taking them altogether, and adding the building and loan associations which come under the same class, we find in round figures $5,350,000,000, owned by 10,000,000 of thrifty people, owning, many of them, only a few dollars apiece, and at the average only about $500 apiece. This is the money power."

It consists, Mr. Cornwell said, of those who carry the dinner pail, the laborers, the shop girls, the clerks, the vast army of the employed, millions and millions of them. These are the constituent elements of the money power. They do not drive on the boulevards. They do not live lives of ease and luxury. They do service wherever commerce needs a willing hand, a clear head, a thrifty soul. "All there is of thrift, industry, virtue, the good old-fashioned qualities that make a nation great—these are the qualities of this great army—'the potentates of the dinner pail.' They own the hundreds of millions in our savings banks. They hold the foremost lien upon the assets of our great life insurance companies. They are the shareholders in the loan associations, and in the aggregate, each owning a little, are heavy stockholders in our great railway and industrial corporations. The country's wealth is distributed among them; they are relatively rich, and there never was a time in any age, or in any land, when these wage earners received so much from their toil and could buy so much with what they received as they could from 1879 to 1890, when the gold basis in the United States was a sure thing, and everybody thought so. They are the money power; they are the industrious, they are the money-saving people of this country. They furnish the cash and the cash credits which make the power, and that is why the money power is for gold—for an honest dollar—against repudiation, against revolution."

CURRENT BUSINESS NEWS.

Industrial.

A press dispatch says: "In the new oil fields of Tennessee and southern Kentucky the Standard Oil Company have within the past week completed two large storage tanks on the Obey river, 35 miles over the mountains west of Rugby road station, on the Queen and Crescent route, which will hold nearly 40,000 barrels of oil."

C. H. Townsend, of the United States Fish Commission, and temporarily of the Behring Sea Seal Commission, in an interview at San Francisco, September 7, said that the seal herd in northern waters "is being rapidly exterminated and the sealing industry ruined by the unrestricted pelagic sealing now indulged in."

Practically every department of the great Cambria Iron Works shut down last Saturday for an indefinite period, throwing at least 2,000 men out of employment. About 3,000 men will be given a few hours' work a week. Lack of orders is given as the cause of the suspension.

The president of the Indiana Coal Operators' Association says to the striking miners that the mines in Indiana cannot be permitted to remain idle when there are plenty of men in other mining fields who would be glad to accept the 55-cent rate.

The *Press* says that a firm engaged in the importation of precious stones in New York wrote to the State Department last November that since the beginning of the year there had been a great scarcity of small pearls suitable for manufacturing jewelers; that the latter complained of losing business through the insufficient and tardy supply of pearls, and asking the government for information regarding the Indian and other pearl fisheries, and ways and means by which the pearl crop is disposed of.

Efforts to start up the Bohn shaft, at Leadville, Col., were unsuccessful on Monday, workmen "being intimidated by the strikers. The operators threaten to shut down the mines for the winter."

The American Tinplate Factory at Elwood, Ind., resumed operations September 8, with eleven out of sixteen mills, and 1,000 men went to work. The other mills will resume operations within a short time, when the other 250 men will be given employment.

A movement is on foot at Pittsburgh to induce local manufacturers of wrought iron and steel pipe to form a combination. There are nine manufacturers in ths western part of Pennsylvania, with an aggregate capital of about $50,000,000. "There is considerable opposition to the formation of a combination, however, the National Tube Works, it is understood, being hostile to the movement."

A press dispatch says: "Pittsburgh distillers have secured the signatures of firms producing 65 per cent. of the whisky distilled in Pennsylvania, New York, New Jersey and Maryland, agreeing to remain idle until September, 1897, irrespective of whether or not all the distillers in the states named signed. It is thought that all but those producing 15 per cent. will agree to the proposition, they being the ones who prevented a former agreement from becoming operative."

Commercial.

For the commercial year ending August 31 new buildings erected at New Orleans were valued at $2,269,070. New pavement was placed along 19½ miles of the streets of that city. During the same year 702 vessels cleared from that port with cargoes of an aggregate tonnage of 999,579 tons, against 649 vessels with 903,002 tons the year before, and 668 vessels and 879,661 tons the year before that. The total quantity of Indian corn exported from New Orleans for the past twelve months was 20,902,000 bushels, an increase of 700 per cent. over the year before. New Orleans' exports of wheat were 1,699,000 bushels last year, a gain of 176,000 bushels over 1894-95.

Beerbohm (London) says evidences are accumulating that the world's wheat crop of 1896 will be less than in any of the three preceding years, and that it is a matter of sufficiency and not excess, and that with stocks in importing countries reduced, holders should have power to enforce their position. Meager supplies are coming forward from Russian seaboard ports, where stocks are only about 6,000,000 bushels, against 12,000,000 a year ago and 8,000,000 in 1894.

It is the opinion of the merchants of Venezuela that the following articles might be imported there from the United States with profit, in addition to those that are now going in: American building material, hardware, common glassware, cutlery, fencing wire, mining and sugar machinery, agricultural implements, carriages, cars, steam engines, lumber, cotton goods, certain kinds of wearing apparel and all kinds of articles for home furnishing and decoration, carpets, curtains, rugs and novelties.

"The merchants of San Francisco," says the *Chronicle* of that city, "having noted the success of the commercial agents who have been operating in Japan in the interests of southern California and the sound terminals, now propose to send out some trade solicitors of their own."

Coxe Brothers & Co. deny the report that a syndicate has purchased the mining properties of the concern.

American flour is now the principal article of export to Venezuela from the United States. The principal exporters think that more than double the amount of American flour sent to Venezuela could be consumed there if present prices could be lowered $2 to $3 per barrel, which might be done by reducing the import duty, say 50 per cent., which would not lessen the revenue of the government.

There has been a marked improvement in the grain business of the Erie Canal recently, and boats, many of which had previously been idle, are actively employed. The increase in business began about the middle of August, when large quantities of grain were brought into Buffalo by lake steamers.

Bromhall (Liverpool) reports the world's visible supply of wheat at 32,000,000 less than a year ago and over 50,000,000 less than two years ago, and predicts reserves in millers', bakers' and consumers' hands as much less than any recent average.

Coal is imported into Venezuela from the United States, and also from Cardiff. The coal now going there from New York and Newport News, Va., "is received with much better favor than the Cardiff article, and it is believed that the importations from the United States will increase considerably."

As a part of its plans for practical work in the extension of the foreign trade of the United States, the National Association of Manufacturers, of Philadelphia, is preparing to establish an exhibition warehouse in Caracas, Venezuela, for the display and sale of American products of various kinds. A circular of information has just been issued which gives the details of this enterprise and presents a large amount of interesting information about the trade of Venezuela.

The Cincinnati *Price Current* estimates the 1896 corn crop will equal 2,275,000,000 bushels, that southern states will grow 180,000,000 bushels less than in 1895, and other states will have 305,000,000 more than in 1895. Corn sold in New York in 1825 at 42c. "It seems to be conceded a ton of corn on the cob at 15c. per bushel and soft coal at $4 per ton favors the use of corn for fuel equaling $1.20 per ton. Where soft coal is now mostly burnt, corn ranges about 14c. per bushel." Clapp & Co., New York, say: "This may allow railways to burn it."

The National Hay Association has been incorporated at Albany to foster trade and commerce in hay, straw and other like products, and to advance "the interests of those having a common business relationship in the trade."

The tenth annual convention of the United Typothetæ of America was opened Wednesday in Rochester, N. Y.

The European agent of the Agricultural Department reports a general reduction from earlier estimates of the wheat crop, owing to unfavorable weather, which was particularly bad at harvest time in central Europe, though fairly good westward. Quality of grain reported high. Oats and barley will be short. Corn crop in the southern peninsular looking well.

Using the September 10th report of the Agricultural Department as a basis, Mr. J. C. Brown, statistician of the New York Produce Exchange, has prepared a statement showing the yield in bushels indicated by the report. Mr. Brown's figures, with additional comparisons taken from his annual statistical report, are appended. His figures of yield per acre are based on the value of a condition of 100 for ten years.

Corn crop indication.	*Aug.* 1, 1896.	*Sept.* 1, 1896.
Condition	96.0	91.0
Indicated average yield per acre, bushels	27.6	26.2
Area, acres	81,000,000	81,000,000
Indicated crop, bushels	2,235,600,000	2,122,200,000
Total wheat indication.	*July.* 1.	*Aug.* 1.	*Sept.* 1.
Condition	83.4	----	74.6
Area, acres	34,619,000	34,619,000	34,619,000
Indicated crop, bushels	434,776,000	407,579,000	394,057,000

That the onion crop of 1896, now generally harvested, is decidedly smaller than a year ago is shown by an exhaustive canvass just made by *American Agriculturist*, covering every section of the country where onions are commercially grown. There is a shortage both in acreage harvested and yield, and the report places the commercial crop of 1896 at 2,200,000 bushels, or nearly 25 per cent. smaller than a year ago, and 1,000,000 bushels, or a third, smaller than the bumper crop of 1891. As in former years, the commercial production is confined almost exclusively to New England, New York, Ohio and the head of Lake Michigan.

Financial.

The following securities were sold at auction this week at New York:

10 Shares Bank of New York, N. B. A	215
85½ Shares The Sackett & Wilhelm Lithographic Company, common	33
40 Shares The Sackett & Wilhelm Lithographic Company, preferred	100
25 Shares Manufacturers' Trust Co. of Brooklyn	200
240 Shares The Ocean Comfort Company	130
$6,000 Tacoma Lake Park & Columbia River Railroad Company 1st mortgage bonds	$100 lot

The Western Union Telegraph Company reports for the quarter ending September 30. Earnings for 1896 partly estimated; others actual.

	1896.	1895.	1894.
Net revenues	$1,600,000	$1,842,648	$1,813,563
Interest and sinking funds	243,500	243,557	242,806
Balance	$1,356,500	$1,599,091	$1,570,757
Dividends	1,191,960	1,191,945	1,191,922
Surplus	$164,540	$407,146	$378,835

The Manhattan Railway Company has declared a quarterly dividend of 1½ per cent., payable October 1.

Messrs. John L. Williams & Sons, bankers, Richmond, Va., have published a valuable as well as interesting chart showing the course of silver prices and silver coinage in this country from the establishment of the mint until the present time.

The American Sugar Refining Company has declared a quarterly dividend of 3 per cent. on its common stock, and on its preferred stock 3½ per cent. on that portion entitled to semi-annual dividends, and 1¾ per cent. on that portion entitled to quarterly dividends, payable October 2.
